Microsoft MCITP 70-662 Exam

Vendor: Microsoft

Exam Code: 70-662

Exam Name: TS: Microsoft Exchange Server 2010, Configuring
QUESTION 1
You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The SMTP domain for the organization is contoso.com. You enable the Exchange anti-spam features. You need to specify a quarantine mailbox for the Exchange organization. What should you do?

A. From the Exchange Management Console (EMC), modify the Content Filter agent.
B. Run the Set-ContentFilterConfig from the Exchange Management Shell.
C. Run the Set-TransportConfig cmdlet from the Exchange Management Shell.
D. From the Exchange Management Console (EMC), modify the Recipient Filter agent.
E. Run the New-TransportRule cmdlet from the Exchange Management Shell.
F. Run the Set-OrganizationConfig cmdlet from the Exchange Management Shell.
G. From the Exchange Management Console (EMC), modify the Sender Filter agent.
H. Run the New-JournalRule cmdlet from the Exchange Management Shell.

Correct Answer: B

QUESTION 2
Your network contains an Active Directory forest named fabrikam.com. The forest contains an Exchange Server 2010 Service Pack 1 (SP1) organization. All client computers run Microsoft Office Outlook 2003. A server named Ex1 hosts all public folders. You upgrade all of the client computers to Outlook 2010. You need to remove all of the public folders from Ex1. What should you do first?

A. Modify the offline address book (OAB) distribution settings.
B. Modify the properties of the mailbox database.
C. Delete all of the public folders from the public folder database.
D. Perform an offline defragmentation of the public folder database files.

Correct Answer: C

QUESTION 3
You have an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. All users access their mailbox by using Microsoft Outlook 2010. You need to ensure that the users can prevent sensitive email messages from being forwarded to other recipients. What should you do first?

A. Configure Transport Layer Security (TLS) on all Send connectors.
B. Install Active Directory Rights Management Services (AD RMS).
C. Run the Set-TransportConfig cmdlet.
D. Deploy Secure MIME.

Correct Answer: B

QUESTION 4
You are a network administrator for a company named Contoso, Ltd. Contoso has an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. The organization contains the following Exchange servers:

- Two Hub Transport servers
- Two Edge Transport servers that have Edge Subscriptions

Contoso merges with another company named Fabrikam, Inc. Fabrikam has an Exchange Server 2010 SP1 organization that uses the fabrikam.com SMTP domain. All mail exchange (MX) records for fabrikam.com point to the contoso.com Edge Transport servers. You deploy a solution for Contoso to journal all email messages by using Hub Transport rules. You need to ensure that all email messages received by fabrikam.com users from the Internet are journaled by the contoso.com Exchange organization. What should you do?

A. From the Exchange Management Shell, run the new-accepteddomain -domaintype internalrelay command.
B. From the Exchange Management Shell, run the new-sendconnector -addressspaces fabrikam.com command.
C. From the Exchange Management Console (EMC), create an accepted domain that uses the authoritative domain type.
D. From the Exchange Management Shell, run the new-receiveconnector -partner command.
E. From the Exchange Management Shell, run the new-accepteddomain -domaintype externalrelay command.
F. From the Exchange Management Console (EMC), create an accepted domain that uses the internal relay domain type.

Correct Answer: A

**QUESTION 5**

Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2008 R2. You have a server named Server1 that runs Windows Server 2008 R2 Service Pack 1 (SP1). You plan to install the following Exchange Server 2010 SP1 server roles on Server1:

- Mailbox
- Client Access
- Hub Transport

You need to prepare Server1 for the planned installation. You import the Server Manager module for Windows PowerShell. What should you do next?

A. From Windows PowerShell, run add-windowsfeature net-framework,rsat,adlds.
B. At the command prompt, run servermanagercmd and use the Exchange-Typical.xml template.

D. At the command prompt, run servermanagercmd and use the Exchange-Base.xml template.

E. At the command prompt, run setup /pl. From the Exchange Server 2010 installation program, select the Automatically install Windows Server roles and features required for Exchange Server check box.

F. From Windows PowerShell, run add-windowsfeature net-framework, rsat-adds,web-server,web-basic-auth.

Correct Answer: C

**QUESTION 6**
You have an Exchange Server 2010 Service Pack 1 (SP1) Mailbox server named Server1. You need to ensure that a copy of each email message modified or deleted by a user named User1 is retained on Server1. What should you do?

A. Create a personal tag.
B. Enable single item recovery.
C. Enable message tracking.
D. Enable litigation hold.
E. Create a retention policy.
F. Create a journal rule.

Correct Answer: D

**QUESTION 7**
Your company has two offices. Each office is configured as an Active Directory site. The offices connect to each other by using a congested WAN link. Each office has a direct, high-speed connection to the Internet. Each site contains two Exchange Server 2010 Service Pack 1 (SP1) Hub Transport servers. You need to ensure that email messages sent to the Internet from the Exchange organization are never routed over the WAN link. What should you do from each site?

A. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
B. From the Exchange Management Console (EMC), modify the properties of the accepted domain.
C. From the Exchange Management Shell, run the Set-SendConnector cmdlet.
D. From the Exchange Management Console (EMC), modify the properties of the Receive connector.
E. From the Exchange Management Console (EMC), modify the properties of the Send connector.
F. From the Exchange Management Console (EMC), modify the properties of the remote domain.
G. From the Exchange Management Shell, run the Set-ForeignConnector cmdlet.
H. From the Exchange Management Shell, run the Set-TransportAgent cmdlet.

Correct Answer: C

QUESTION 8
You have an Exchange Server 2010 Service Pack1 (SP1) organization. The organization contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access Hub Transport</td>
<td>New York</td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access Hub Transport</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>

The Mailbox servers are members of a database availability group (DAG) named DAG1. The organization also has a load balancing solution for Client Access. The load balancing solution has a virtual IP address that is available by using the mail.contoso.com host name. You create a new Client Access array that uses the outlook.contoso.com fully qualified name (FQDN). You need to ensure that all users connect to outlook.contoso.com from Microsoft Outlook 2010. Which Windows Powershell cmdlet should you run?

A. Set-MailboxDatabaseCopy.
B. New-DatabaseAvailabilityGroup.
C. Set-MailboxServer.
D. Set-ClientAccessServer.
E. New-PublicMailboxDatabase.
F. New-PublicFolderDatabase.
G. Set-ClientAccessArray.
H. Add-MailboxDatabaseCopy.
I. Set-DatabaseAvailabilityGroup.
J. Set-PublicFolderDatabase.
K. Add-RoleGroupMember.
L. Add-DatabaseAvailabilityGroupServer.
M. Set-MailboxDatabase.

Correct Answer: M

QUESTION 9
You have an Exchange Server 2010 Service Pack1 (SP1) organization. The organization contains the servers configured as shown in the following table:
The Mailbox servers are members of a database availability group (DAG) named DAG1. You need to configure DAG1 to use a static IP of 192.168.1.100. Which Windows PowerShell cmdlet should you run?

A. Set-MailboxServer.
B. Set-DatabaseAvailabilityGroup.
C. New-DatabaseAvailabilityGroup.
D. Add-MailboxDatabaseCopy.
E. Add-DatabaseAvailabilityGroupServer.
F. Set-MailboxDatabase.
G. Set-ClientAccessServer.
H. Set-ClientAccessArray.
I. Set-PublicFolderDatabase.
J. New-PublicFolderDatabase.
K. Add-RoleGroupMember.
L. Set-MailboxDatabaseCopy.
M. New-MailboxDatabase.

Correct Answer: B

**QUESTION 10**

You have an Exchange Server 2010 Service Pack 1 (SP1) organization named fabrikam.com. A partner company has an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. You plan to implement federated delegation between fabrikam.com and contoso.com. You need to identify which DNS records must be created to support federated delegation. Which DNS records should you identify? (Choose all that apply).

A. Host (A).
B. Mail exchanger (MX).
C. Host information (HINFO).
D. Text (TXT).
E. Mail group (MG).

Correct Answer: AD
QUESTION 11
Your network contains an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization. External users access their email by using Outlook Web App. You need to ensure that the external users can log on to Outlook Web App without specifying a domain name. Which Windows PowerShell cmdlet should you use?

A. Set-OrganizationConfig.
B. Set-OwaVirtualDirectory.
C. New-OrganizationRelationShip.
D. New-OwaMailboxPolicy.

Correct Answer: B

QUESTION 12
You have an Exchange Server 2010 Service Pack1 organization. The Organization contains a Hub Transport server named Server1 and an Edge Transport sever named Server2. All servers are configured to use an internal DNS server named DNS1 for host resolution. You configure an Edge Subscription from Server1 to Server2. You deploy a monitoring server named ServerApp1. ServerApp1 will send email notifications to administrators. You need to ensure that ServerApp1 can relay email to the administrators through Server1. What should you do?

A. From the Exchange Management Shell, run the Set-TransportServer cmdlet.
B. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
C. From the Exchange Management Console (EMC), create a transport rule.
D. From the Exchange Management Console (EMC), modify the properties of the remote domain.
E. From the Exchange Management Shell, run the Set-ReceiveConnector cmdlet.
F. From the Exchange Management Console (EMC), disable the IP Block List feature.
G. From the Exchange Management Console (EMC), modify the properties of the accepted domain.
H. From the Exchange Management Shell, run the Set-TransportAgent cmdlet.

Correct Answer: E

QUESTION 13
You have an Exchange Server 2010 Service Pack1 organization. The organization contains a Hub Transport server named Server1 and an Edge Transport sever named Server2. All servers are configured to use an internal DNS server named DNS1 for host resolution. You configure an Edge Subscription from Server1 to Server2. You need to modify the delayed acknowledgment (ACK)
setting of Server2. What should you do?

A. From the Exchange Management Console (EMC), modify the properties of the accepted domain.
B. From the Exchange Management Console (EMC), create a transport rule.
C. From the Exchange Management Shell, run the Set-TransportServer cmdlet.
D. From the Exchange Management Shell, run the Set-ReceiveConnector cmdlet.
E. From the Exchange Management Console (EMC), disable the IP Block List feature.
F. From the Exchange Management Shell, run the Set-TransportAgent cmdlet.
G. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
H. From the Exchange Management Console (EMC), modify the properties of the remote domain.

**Correct Answer: D**

**QUESTION 14**
Your network contains an Active Directory domain. The domain contains one site. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains two Client Access servers and two Hub Transport servers. Users report that they fail to receive email messages from the Internet. You review the message tracking logs and discover that the organization failed to receive any email messages from the Internet during the past hour. You need to identify what is preventing the Hub Transport servers from receiving email messages. What should run from the Exchange Management Shell?

A. Test-WebServicesConnectivity.
B. Test-MailFlow.
C. Get-MailboxDatabase.
D. Test-MapiConnectivity.
E. Test-ReplicationHealth.
F. Test-AvailabilityService.
G. Get-SenderIdConfig.
H. Test-SMTPConnectivity.
I. Checkdatabaseseredundancy.ps1.
J. Retry-Queue.
K. Test-SenderID.
L. Get-MailboxDatabaseCopyStatus.
M. Test-SystemHealth.
N. Test-OutlookWebServices.

**Correct Answer: H**

**QUESTION 15**
Your network contains an Active Directory domain. The domain contains one site. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains two Client Access servers,
two Hub Transport servers, and three Mailbox servers. The mailbox servers are members of a
database availability group (DAG) named DAG1. You have a mailbox database named DB1. You
configure two mailbox database copies of DB1. You verify that both mailbox database copies have
a status of Healthy. You need to ensure that an administrator is notified when the health status of
a mailbox database copy changes. What should you run from the Exchange Management Shell?

A. Test-WebServicesConnectivity.
B. Test-SystemHealth.
C. Test-AvailabilityService.
D. checkdatabaseredundancy.ps1.
E. Test-ReplicationHealth.
F. Test-SmtpConnectivity.
G. Get-MailboxDatabaseCopyStatus.
H. Retry-Queue.
I. Test-MailFlow.
J. Get-MailboxDatabase.
K. Test-SenderId.
L. Get-SenderIdConfig.
M. Test-MapiConnectivity.
N. Test-OutlookWebServices.

Correct Answer: D

QUESTION 16
Your network contains two Active Directory forests named Contoso and NWTraders. The Contoso
forest contains Exchange 2003 SP2 Servers. The NWTraders forest contains Exchange 2010 SP1
Servers. You need to move all mailboxes from contoso to NWTraders. What should you do from
NWTraders forest?

A. Create a mail enabled contact for each mailbox in contoso. Run the Movemailbox cmdlet.
B. Create a mail enabled user for each mailbox in contoso. Run the New-MoveRequest cmdlet.
C. Create a linked mailbox for each mailbox in contoso. Run Movemailbox cmdlet.
D. Create a shared mailbox for each mailbox in contoso. Run the New-MoveRequest cmdlet.

Correct Answer: B

QUESTION 17
You have a hosted Exchange organization. All servers in the organization have Exchange Server 2010
SP1 installed. You need to group a set of users for administrative delegation. What should you
create?

A. A new distribution group.
QUESTION 18
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to ensure that each user who sends a meeting request to a room mailbox receives a custom message from the mailbox. What should you do from the properties of the mailbox?

A. Configure the Mailbox Features settings.
B. Configure the Mail Flow settings.
C. Enable the Resource Booking Attendant.
D. Configure the Resource Information settings.
E. Configure the Resource In-Policy Requests settings.
F. Configure the Resource Out-of-policy Requests settings.
G. Configure the Account settings.

Correct Answer: D

QUESTION 19
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to ensure that an equipment mailbox can be scheduled for meetings that occur during working hours only. What should you do from the properties of the mailbox?

A. Configure the Mailbox Features settings.
B. Configure the Resource Policy settings.
C. Enable the Resource Booking Attendant.
D. Configure the Resource In-Policy Requests settings.
E. Configure the Mail Flow settings.
F. Configure the Account settings.
H. Configure the Resource Information settings.

Correct Answer: B

QUESTION 20
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The organization contains a distribution group named Group1. You need to ensure that a
user named User1 can review and approve all messages sent to Group1. What should you do?

A. Modify the Managed by list for Group1.
B. Create a new journal rule and specify user1 as the journal recipient.
C. Modify the mail flow settings for User1.
D. Modify the mail flow settings for Group1.

**Correct Answer: D**

**QUESTION 21**

You have an Exchange Server 2010 SP1 organization named contoso.com. All users have the @contoso.com email address suffix. You discover that both anonymous and authenticated users can post content to a public folder named folder1 by sending email messages to folder1@contoso.com. You need to prevent all users from posting content to folder1 by sending email. What should you do?

A. From Outlook Web App (OWA), modify them properties of Folder1.
B. From the Exchange Management Shell, modify the permissions of the default Receive connector.
C. From the Public Folder Management Console, modify the properties of Folder1.
D. From the Exchange Management Console, modify the properties of the Public Folder database.

**Correct Answer: C**

**QUESTION 22**

You deploy an Exchange organization. All Servers in the organization have Exchange Server 2010 SP1 installed. The organization contains two Hub Transport servers. The network contains two Active Directory sites named Site1 and Site2. Each site contains one Hub Transport server. Each site has a direct connection to the Internet. You need to configure message routing for the organization to meet the following requirements:

- Email messages to a SMTP domain named nwtrader.com must be delivered from Site2.
- If Site2 is unavailable, email messages sent to nwtraders.com must be delivered from Site1.
- Email messages sent to all other SMTP domains must be delivered from Site1 only.

What should you do?

A. Create two Send connectors.
   Assign one Hub Transport server as a source server to each Send connector.
   Configure the connectors as Scoped Send connectors.

B. Create one Send connector.
   Assign both Hub Transport servers as source servers.
Configure the connector as a Scoped Send connector.

C. Create one Send connector.
   Assign both Hub Transport servers as source servers.
   Configure the address spaces for the connector, and then configure the costs for the address spaces.

D. Create two Send connectors.
   Assign one Hub Transport server as the source server to each Send connector.
   Configure the address spaces for each connector.

Correct Answer: D

QUESTION 23
You have an Exchange organization named contoso.com. All servers in the organization have Exchange Server 2010 SP1 installed. The organization contains a mail-enabled domain local group name Group1. Users from outside the organization report that all email messages sent to group1@contoso.com generate a non-delivery report (NDR). You need to ensure that users from outside the organization can successfully send email to group1@contoso.com. What should you modify for Group1?

A. The advanced settings.
B. The mail flow settings.
C. The group scope.
D. The group type.

Correct Answer: B

QUESTION 24
Your company has a main office and five branch offices. Each office is configured as a separate Active Directory site. You have an Exchange Server 2010 SP1 organization that contains one Hub Transport server in each site and an Edge Transport server in the main office site. You add a disclaimer to all internal and external email messages sent by users in the company. You discover that the email messages sent from one of the branch offices do not include the disclaimer. You need to ensure that all email messages include the disclaimer. What should you do?

A. Force Active Directory replication on the branch office domain controllers.
B. Export all transport rules from the Hub Transport server in the main office. Import the transport rules in the branch office Hub Transport server.
C. Restart the Microsoft Exchange System Attendant.
D. Modify the cache settings of the branch office Hub Transport servers.
QUESTION 25
You have an Exchange Server 2003 organization. You install an Exchange Server 2010 SP1 Edge Transport server on the network. You need to ensure that the Edge Transport server can send and receive e-mail messages from the Internet for the organization. You configure the Exchange Server 2003 servers to send all e-mail for external recipients to the Edge Transport servers. What should you do on the Edge Transport servers?

A. Create and configure a Send connector.
   Create and configure a Receive connector.
   Create and configure an Accepted domain.

B. Create an Edge Subscription file.
   Create and configure a Send connector.
   Create and configure a Receive connector.

C. Create an Edge Subscription file.
   Create and configure a Send connector.
   Create and configure an Accepted domain.

D. Create and configure a Send connector.
   Create and configure an Accepted domain.
   Install the Exchange Server 2010 schema extensions.

Correct Answer: A

QUESTION 26
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The network contains internal DNS servers. You need to ensure that the Hub Transport servers use external DNS servers when they resolve Internet names. What should you modify?

A. The properties of the Hub Transport server object.
B. The message delivery properties of the Hub Transport global settings.
C. The properties of the default remote domain.
D. The properties of a Send connector.

Correct Answer: A

QUESTION 27
You have an Exchange organization named Contoso, Ltd. All servers in the organization have
Exchange Server 2010 SP1 installed. The organization contains an Edge Transport Server. Users from a company named Fabrikam, Inc., send email messages over the Internet by using the @fabrikam.com email address suffix. Contoso acquires Fabrikam. You need to ensure that messages sent from Fabrikam users to Contoso users have the contoso.com email address suffix in their source address. What should you create?

A. An Edge Transport rule.
B. An email address policy.
C. A Hub Transport rule.
D. An address rewrite entry.

Correct Answer: D

QUESTION 28
You have an organization that contains Exchange Server 2007 and Exchange Server 2010 Hub Transport servers. You create a moderated distribution group named Group1. You assign a user named User1 as the group's moderator. User1 reports that some email messages are delivered to the members of Group1 without his approval. You need to ensure that all email messages delivered to Group1 are approved by User1. What should you do?

A. Recreate the group as a dynamic distribution group.
B. Restart the MSExchangeTransport Service.
C. Modify the expansion server for the group.
D. Force a replication between all domain controllers.

Correct Answer: C

QUESTION 29
You have an Exchange organization named nwtraders.com. All servers in the organization have Exchange Server 2010 SP1 installed. Your company acquires another company named Contoso, Ltd. You plan to create new mailboxes for each user from Contoso. You need to ensure that each new mailbox can receive email messages sent to contoso.com. Which two objects should you create? (Choose two).

A. A Receive connector.
B. A Remote domain.
C. An organizational relationship.
D. An accepted domain.
E. An email address policy.

Correct Answer: DE
QUESTION 30
You have an Exchange Server 2010 SP1 Mailbox server that contains multiple mailbox databases. You need to ensure that you are notified when deleted mailboxes are purged from the server. What should you do?

A. Attach a new task to the Application event log.
B. Modify the properties of the mailbox database objects.
C. Create a new Data Collector Set.
D. Create a new Event Viewer Subscription.

Correct Answer: A

QUESTION 31
You have an Exchange organization. All Servers in the organization have Exchange Server 2010 SP1 installed. The organization contains five Hub Transport servers. All of the Hub Transport servers are listed as source servers for the Send connector to the Internet. You need to prevent a Hub Transport Server named Hub1 from sending and receiving email messages from the Internet. The solution must meet the following requirements:

• Ensure that Mailbox servers can deliver email messages to Hub1
• Ensure that all other Hub Transport server can deliver email messages to the Internet.

What should you do first on Hub1?

A. Suspend all message queues.
B. Disable all Receive connectors and Send connectors.
C. Stop the Microsoft Exchange Mail Submission Service.
D. Stop the Microsoft Exchange Transport Service.

Correct Answer: A

QUESTION 32
You have a hosted Exchange organization that contains 10,000 mailboxes. All servers in the organization have Exchange Server 2010 SP1 installed. You need to retrieve the following information for the organization:

• The IP address of all client connections
• The network latency for all MAPI connections
• The version of Microsoft Outlook that is used to access all of the mailboxes.

Download the complete collection of Exam’s Real Q&As www.ensurepass.com
What should you use?

A. The Microsoft Exchange Server User Monitor (ExMon).
B. The Test-LogonStatistics cmdlet.
C. The Test-MAPIConnectivity cmdlet.
D. The Remote Connectivity Analyzer.

Correct Answer: A

QUESTION 33
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. All Servers run Windows Server 2008 R2. The organization contains Mailbox servers, Client Access servers, and Hub Transport servers only. You need to identify which user accounts are associated with the largest mailboxes in the organization. What should you do?

A. Modify the Server Diagnostic Logging Properties.
B. Run the Get-User cmdlet.
C. Review the Application event log.
D. Review the connectivity logs.
E. Enable SMTP protocol logging.
F. Modify the Log Settings from the properties of the Hub Transport Server.
G. Run the Exchange Best Practices Analyzer.
H. Run the Get-MailboxStatistics cmdlet.
I. Run the Get-MailboxFolderStatistics cmdlet.
J. Run the Get-Mailboxdatabase cmdlet.
K. Run the Set-AdminAuditLogConfig cmdlet.
L. Run the Set-EventLogLevel cmdlet.

Correct Answer: H

QUESTION 34
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. All Servers run Windows Server 2008 R2. The organization contains Mailbox servers, Client Access servers, and Hub Transport servers only. You need to ensure that you can review any changes made by administrators to the Exchange configuration. The solution must identify which administrators performed each change. What should you do?

A. Run the Get-MailboxStatistics cmdlet.
B. Enable SMTP protocol logging.
C. Run the Exchange Server User Monitor (ExMon).
D. Modify the Log Settings from the properties of the Hub Transport server.
E. Run the Set-AdminAuditLogConfig cmdlet.
F. Review the Application event log.
G. Run the Get-MailboxFolderStatistics cmdlet.
H. Modify the Server Diagnostic Logging Properties.
I. Run the Set-EventLogLevel cmdlet.
J. Run the Get-User cmdlet.
K. Review the connectivity logs.
L. Run the Exchange Best Practices Analyzer.

Correct Answer: E

QUESTION 35
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to identify why a remote SMTP server rejects email sent from the organization. What should you do?

A. Modify the diagnostic logging level on the MSEchangeTransportService object, and then review the Application event log.
B. Modify the connectivity log settings on the Transport server, and then review the connectivity logs.
C. Modify the message tracking settings on the Transport server, and then review the message tracking logs.
D. Modify the protocol logging level on the Send connectors, and then review the protocol logs.

Correct Answer: D

QUESTION 36
Your network contains two Exchange Server 2010 SP1 mailbox servers. You create a database availability group (DAG). You need to install all of the Failover Clustering components on the Mailbox servers. What should you do?

A. Add both servers to the DAG.
B. Install the Application server role on both servers.
C. Run Setup /roles:Mailbox /NewCMS on both servers.
D. Run the Start-ClusterMailboxServer cmdlet on both servers.

Correct Answer: A

QUESTION 37
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The organization contains a database availability group (DAG) named DAG1. DAG1 contains two Mailbox servers named Server1 and Server2. Five databases are replicated in DAG1. You need to install Exchange rollup updates on Server1. The solution must not prevent users from accessing their mailboxes. What should you do first?

A. Run the Set-DatabaseAvailabilityGroup cmdlet, and then enable Datacenter Activation coordination for DAG1.
B. Run the Set-MailboxDatabase cmdlet, and then configure all mailbox database copies as lagged copies.
C. Run the Suspend-MailboxDatabaseCopy cmdlet, and then switch over all mailbox databases to Server2.
D. Run the UpdateMailboxDatabaseCopy cmdlet, and then modify the mailbox database Activation preference.

Correct Answer: C

QUESTION 38
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to ensure that you can restore a mailbox that was deleted from a mailbox database if the mailbox was deleted up to six months earlier. The solution must not require a database backup. What should you do?

A. Create a managed custom folder and managed content settings.
B. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
C. From the Exchange Management Shell, run Set-MailboxDatabase-DumpsterStatistics $true.
D. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
E. Create a retention policy and a retention tag.
F. From the properties of the mailbox database, modify the Deletion Settings.
G. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
H. From the properties of the mailbox database, modify the maintenance schedule.
I. From the properties of the mailbox, enable litigation hold.
J. From the properties of the mailbox, enable retention hold.
K. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
L. From the properties of a Mailbox server, modify the System Settings.
M. From the Exchange Management Shell, enable single item recovery.

Correct Answer: F

QUESTION 39
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1
installed. You need to ensure that an administrator can recover hard-deleted email messages from a user’s mailbox until the deleted item retention period has elapsed. All expired email messages must be deleted when the retention period has elapsed. What should you do?

A. From the Exchange Management Shell, run Set-MailboxDatabase -DumpsterStatistics $true.
B. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
C. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
D. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
E. From the properties of the mailbox database, modify the Deletion Settings.
F. From the Exchange Management Shell, enable single item recovery.
G. Create a managed custom folder and managed content setting.
H. From the properties of a Mailbox server, modify the System Settings.
I. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
J. From the properties of the mailbox, enable retention hold.
K. Create a retention policy and a retention tag.
L. From the properties of the mailbox, enable litigation hold.
M. From the properties of the mailbox database, modify the maintenance schedule.

Correct Answer: F

QUESTION 40
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The organization contains two Mailbox servers named Server1 and Server2. Each Mailbox server has one mailbox database and one public folder database. You discover that all users create public folders on Server1 only. You need to ensure that all users create public folders on Server2 only. What should you do?

A. Move all mailboxes to server2.
B. Modify the properties of both mailbox databases.
C. Remove all public folder replicas from Server1.
D. Modify the properties of both public folder databases.

Correct Answer: B

QUESTION 41
You install two Exchange 2010 SP1 Edge Transport servers named Edge1 and Edge2. You need to ensure that e-mail is sent to Edge2 only if Edge1 fails. What should you do?

A. Create two CNAME records that have the same name. Create one MX record that uses the FQDN of the CNAME records. Assign a priority of 0 to the MX record.
B. Create two MX records. Assign the MX record for Edge1 a priority of 5. Assign the MX record for Edge2 a priority of 1.
C. Create two A records that use the same name. Create one MX record that uses the FQDN of
the A record. Assign a priority of 0 to the MX record.
D. Create two MX records. Assign the MX record for Edge1 a priority of 1. Assign the MX record for Edge2 a priority of 5.

Correct Answer: D

QUESTION 42
Your network contains an Exchange Server SP1 Edge Transport server named Server1. You install a new Exchange Server 2010 SP1 Edge Transport server named Server2. You need to copy all the Edge Transport configurations from Server1 to Server2. Which two actions should you perform on Server1? (Choose two).

A. Run the ExportEdgeConfig.PS1 script.
B. Run the New-EdgeSyncServiceConfig cmdlet.
C. Backup the system state.
D. Run the Export-TransportRuleCollection cmdlet.
E. Run the Export-ExchangeCertificate cmdlet.

Correct Answer: AD

QUESTION 43
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The organization contains a database availability group (DAG) named DAG1. DAG1 contains three Mailbox servers including a server named Server1. Server1 fails. You restore Server1. You need to ensure that Server1 can replicate mailbox databases from DAG1. What should you do first?

A. Remove the Default Mailbox database from Server1.
B. Modify the GUID for Server1.
C. Remove the object for Server1 from DAG1.
D. Disable log truncation for the mailbox databases in DAG1.

Correct Answer: C

QUESTION 44
You have an Exchange Server 2010 SP1 organization. The organization contains two mailbox-enabled users named User1 and User2. You need to ensure that User1 can send email messages on behalf of User2. Which cmdlet should you use?

A. Set-MailUser.
B. Set-MailboxFolderPermissions.
C. New-TransportRule.
D. Set-Mailbox.
QUESTION 45
You have an Exchange Server 2010 SP1 organization. The organization contains two mailbox-enable users named User1 and User2. You need to ensure that User1 can send email messages as User2. Which cmdlet should you use?

A. Add-ADPermission.
B. Set-Group.
C. Set-MailboxFolderPermissions.
D. Set-Mailbox.
E. New-ManagementRoleAssignment.
F. New-ManagementScope.
G. New-TransportRule.
H. New-MailContact.
I. Set-MailUser.
J. Set-ManagementRoleAssignment.

Correct Answer: A

QUESTION 46
Your network contains an Exchange Server 2010 SP1 organization named contoso.com. The organization contains a Client Access server named Server1 and a domain controller named DC1. All client computers run Windows 7 Professional. All users access their calendar and download their email messages by using Windows Mail. You need to modify the TCP port on the Exchange server used by the Windows Mail clients. What should you do?

A. Run the Set-PopSettings cmdlet.
B. Run the Set-OfflineAddressBook cmdlet.
C. Modify the properties of the Exchange ActiveSync virtual directory.
D. Modify the Redirect.aspx file.
E. Modify the properties of the Client Access server object.
F. Run the New-OwaMailboxPolicy cmdlet.
G. Modify the properties of the offline address book (OAB) virtual directory.
H. Run the New-ActiveSyncMailboxPolicy cmdlet.
I. Modify the Casredirect.aspx file.

Correct Answer: E
QUESTION 47
Your network contains an Exchange Server 2010 SP1 organization named contoso.com. The organization contains a Client Access server named Server1 and a domain controller named DC1. You need to modify the external host name for Outlook Anywhere. What should you do?

A. Run the Set-OfflineAddressBook cmdlet.
B. Run the Export-ExchangeCertificate cmdlet.
C. Modify the Redirect.aspx file.
D. Modify the Casredirect.aspx file.
E. Modify the properties of the Client Access server object.
F. Modify the properties of the offline address book (OAB) virtual directory.
G. Run the Set-ImapSettings cmdlet.
H. Modify the properties of the Exchange ActiveSync virtual directory.
I. Run the Set-PopSettings cmdlet.
J. Run the New-ActiveSyncMailboxPolicy cmdlet.
K. Run the New-OwaMailboxPolicy cmdlet.

Correct Answer: E

QUESTION 48
Your network contains an Exchange Server 2010 SP1 organization named contoso.com. The organization contains a Client Access server named Server1 and a domain controller named DC1. You need to ensure that all Outlook Anywhere SSL sessions can be terminated by the firewall. The solution must ensure that Server1 will accept non-SSL sessions from the firewall. What should you do?

A. Run the Export-ExchangeCertificate cmdlet.
B. Modify the properties of the Client Access server object.
C. Run the New-ActiveSyncMailboxPolicy cmdlet.
D. Modify the Casredirect.aspx file.
E. Modify the Redirect.aspx file.
F. Modify the properties of the offline address book (OAB) virtual directory.
G. Modify the properties of the Exchange ActiveSync virtual directory.
H. Run the Set-OfflineAddressBook cmdlet.
I. Run the New-OwaMailboxPolicy cmdlet.

Correct Answer: A
J. Run the Set-PopSettings cmdlet.
K. Run the Set-ImapSettings cmdlet.

**Correct Answer: B**

**QUESTION 49**

Your network contains an Exchange Server 2010 SP1 organization named contoso.com. The organization contains a Client Access server named Server1 and a domain controller named DC1. You need to ensure that users who have a Windows Phone 7 device can connect to the Exchange organization by using the mail.contoso.com host name. The solution must ensure that all of the Windows Phone 7 devices can use the Autodiscover service. What should you do?

A. Modify the Casredirect.aspx file.
B. Run the Export-ExchangeCertificate cmdlet.
C. Modify the properties of the Client Access server object.
D. Run the Set-OfflineAddressBook cmdlet.
E. Modify the properties of the Exchange ActiveSync virtual directory.
F. Modify the properties of the offline address book (OAB) virtual directory.
G. Run the Set-PopSettings cmdlet.
H. Modify the properties of the OWA virtual directory.
I. Run the New-OwaMailboxPolicy cmdlet.
J. Run the Set-ImapSettings cmdlet.
K. Modify the Redirect.aspx file.

**Correct Answer: E**

**QUESTION 50**

Your network contains an Active Directory domain named contoso.com. The network contains a server named server1 that runs Exchange Server 2010 SP1. The Exchange organization contains 500 mailboxes. All of the mailboxes are stored on a mailbox database named DB1. You need to provide a user named User1 with the ability to open the mailbox of another user named User2. User1 must only be able to open the mailbox of User2. Which PowerShell cmdlet should you use?

A. New-RoleAssignmentPolicy.
B. Set-Mailbox.
C. Add-MailboxPermission.
D. New-ManagementRole.
E. New-ManagementRoleEntry.
F. New-ManagementRoleAssignment.
G. New-RoleGroup.
H. Add-ADPermission.
I. Set-DestinationGroup.
K. New-ManagementScope.
L. New-EmailAddressPolicy.
M. Add-ManagementRoleEntry.

Correct Answer: C

QUESTION 51
Your network contains an Active Directory domain named contoso.com. The network contains a server named Server1 that runs Exchange Server 2010 SP1. The Exchange organization contains 500 mailboxes. All of the mailboxes are stored on a mailbox database named DB1. You need to prevent a user named User1 from permanently deleting email messages from his mailbox. Which PowerShell cmdlet should you use?

A. New-MailboxAuditSearchLog.
B. New-ManagementRoleAssignment.
C. New-ManagementRole.
D. New-RoleAssignmentPolicy.
E. New-RoleGroup.
F. New-ManagementRoleEntry.
G. New-ManagementScope.
H. Add-ManagementRoleEntry.
I. New-EmailAddressPolicy.
J. Add-ADPermission.
K. Set-Mailbox.
L. Set-DistributionGroup.
M. Add-MailboxPermission.

Correct Answer: K

QUESTION 52
Your network contains an Active Directory domain named contoso.com. The network contains a server named Server1 that runs Exchange Server 2010 SP1. The Exchange organization contains 500 mailboxes. All of the mailboxes are stored on a mailbox database named DB1. You need to provide an administrator named Admin1 with the ability to search for mailbox content in multiple mailboxes. Which Windows PowerShell cmdlet should you use?

A. New-EmailAddressPolicy.
B. Set-Mailbox.
QUESTION 53
Your network contains an Active Directory domain named contoso.com. The network contains a server named Server1 that runs Exchange Server 2010 SP1. The Exchange organization contains 500 mailboxes. All of the mailboxes are stored on a mailbox database named DB1. You need to add an administrator named Admin1 to the Recipient Management role group. Admin1 must only be able to manage Exchange recipients in an organizational unit name OU1. Which PowerShell cmdlet should you use first?

A. Set-DistributionGroup.
B. New-ManagementScope.
C. New-ManagementRole.
D. Add-MailboxPermission.
E. New-RoleGroup.
F. New-EmailAddressPolicy.
G. New-RoleAssignmentPolicy.
H. New-MailboxAuditSearchLog.
I. Add-ADPermission.
J. Add-ManagementRoleEntry.
K. New-ManagementRoleEntry.
L. Set-Mailbox.
M. New-ManagementRoleAssignment.

Correct Answer: E

QUESTION 54
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to prevent users on the network from enabling text message notifications to their Windows mobile devices. What should you configure?
A. A Group Policy administrative template.
B. An RMS template.
C. An Outlook Web App mailbox policy.
D. An Exchange ActiveSync mailbox policy.

Correct Answer: C

QUESTION 55
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The network contains two Active Directory sites named Site1 and Site2. Each site contains two Client Access servers. All mailbox databases in the organization are replicated to mailbox servers in both sites. All users connect to their mailbox by using Microsoft Office Outlook 2003. You create a Client Access server array named array1.contoso.com in Site1, and then configure all users to connect to array1.contoso.com. You verify that all users can connect successfully to array1.contoso.com. Once month later, all of the servers in Site1 fail. You need to ensure that all users can connect to a Client Access server in Site2 by using array1.contoso.com. What should you do?

A. Modify the host (A) record for array1.contoso.com to point to the IP address of a Client Access server in Site2.
C. Modify the host (A) record for autodiscover.contoso.com to point to the IP address of a Client Access server in Site2.

Correct Answer: A

QUESTION 56
You have an Exchange Server 2010 SP1 organization. You need to allow all the members of a group named Sales to add members to distribution groups. Which cmdlet should you use?

A. Set-Mailbox.
B. New-ManagementScope.
C. New-MailContact.
D. New-TransportRule.
E. Add-ADPermission.
F. New-ManagementRoleAssignment.
G. Set-ManagementRoleAssignment.
H. Set-MailUser.
I. Set-MailboxFolderPermissions.
J. Set-Group.

Correct Answer: F

QUESTION 57
You have an Exchange Server 2010 SP1 organization. All users have Microsoft Outlook 2010 installed on their client computer. You need to ensure that the users are warned of a new corporate communication policy before they send email messages to users in the legal department. Which cmdlet should you use?

A. Set-MailUser.
B. New-ManagementScope.
C. New-ManagementRoleAssignment.
D. Set-ManagementRoleAssignment.
E. New-MailContact.
F. New-TransportRule.
G. Set-Mailbox.
H. Set-MailboxFolderPermissions.
I. Add-ADPermission.
J. Set-Group.

Correct Answer: G

QUESTION 58
You have an Exchange Server 2010 SP1 organization. You need to ensure that a user named user1 can manage the properties of all the public folders in the organization. What cmdlet should you use?

A. New-ManagementScope.
B. Set-Mailbox.
C. Set-ManagementRoleAssignment.
D. New-MailContact.
E. Set-MailUser.
F. Set-Group.
G. Set-MailboxFolderPermissions.
H. New-TransportRule.
I. New-ManagementRoleAssignment.
J. Add-ADPermissions.

Correct Answer: I
QUESTION 59
Your company has offices in New York and Montreal. Each Office is configured as an Active Directory site. You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access</td>
<td>New York</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access</td>
<td>Montreal</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>

Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server. Server3 contains a public folder database. You create a new public folder database on server4. You need to ensure that all new public folders created by users are created on server4. What should you modify?

A. The mailbox database.
B. An Attachment Filter agent.
C. The Autodiscover DNS record.
D. The email address policy.

Correct Answer: A

QUESTION 60
You have an Exchange Server 2003 organization. All servers in the organization run Exchange 2003 SP1. Corporate security policy states that the Exchange servers cannot be managed by using Remote Desktop sessions. You plan to deploy Exchange Server 2010 SP1 server to the network. You have a member server named Server5 that runs Windows Server 2008 SP2. You need to install the Exchange Management Console (EMC) on Server5. What should you do on Server5?

A. Run setup /mode:upgrade.
B. Modify the Internet Information (IIS) authentication settings.
C. Run setup /nprs:server5.
D. Suppress link state updates.
E. Run setup /rps:server5.
F. Add a mail exchange (MX) record to the internal DNS zone.
G. Modify the smart host settings.
I. Install Windows Server 2008 R2.
J. Install Windows 7.
K. Add a mail exchanger (MX) record to the public DNS zone.
L. Run setup /r:mt.

Correct Answer: L

QUESTION 61
Your company has one office in New York. The office is configured as an Active Directory site. All domain controllers in the forest run Windows server 2003 SP2. All client computers run Windows XP SP2. You have an Exchange Server 2003 organization. All servers in the organization run Exchange Server 2003 SP1. You plan to deploy Exchange Server 2010 SP1 servers to the network. You need to ensure that you can install the first Exchange Server 2010 SP1 server. What should you do first?

A. Install Windows Server 2008 R2.
B. Install Windows 7.
C. Add a mail exchanger (MX) record to the public DNS zone.
D. Run setup /nprs:server5.
E. Run setup /mode:upgrade.
F. Run setup /r:mt.
G. Suppress link state updates.
H. Modify the smart host settings.
I. Modify the Internet Information (IIS) authentication settings.
J. Add a mail exchange (MX) record to the internal DNS zone.
L. Run setup /rps:server5.

Correct Answer: K

QUESTION 62
Your company has one office in New York. The office is configured as an Active Directory site. All domain controllers in the forest run Windows server 2003 SP2. All client computers run Windows XP SP2. You have an Exchange Server 2003 organization. All servers in the organization run Exchange Server 2003 SP1. Corporate security policy states that the Exchange servers cannot be managed by using Remote Desktop sessions. You plan to deploy Exchange Server 2010 SP1 server to the network. You need to ensure that you can run the Exchange Server 2010 SP1 management tools from a client computer. What should you do on the client computer?

A. Modify the Internet Information (IIS) authentication settings.
B. Suppress link state updates.
C. Install Windows 7.
D. Run setup /nprs:server5.
E. Install Exchange Server 2003 SP2.
F. Add a mail exchange (MX) record to the internal DNS zone.
G. Run setup /r:mt.
H. Install Windows Server 2008 R2.
I. Modify the smart host settings.
J. Run setup /rps:server5.
K. Run setup /mode:upgrade.
L. Add a mail exchanger (MX) record to the public DNS zone.

Correct Answer: C

QUESTION 63
Your company has one office in New York. The office is configured as an Active Directory site. All domain controllers in the forest run Windows server 2003 SP2. All client computers run Windows XP SP2. You have an Exchange Server 2003 organization. All servers in the organization run Exchange Server 2003 SP1. Corporate security policy states that the Exchange servers cannot be managed by using Remote Desktop sessions. You plan to deploy Exchange Server 2010 SP1 server to the network. You have a server that runs Windows Server 2008 SP2. You install the Edge Transport server role on the server. You need to ensure that all email messages sent to the Internet from the Exchange Server 2003 organization are relayed through the Edge Transport server. What should you do?

A. Suppress link state updates.
C. Add a mail exchange (MX) record to the internal DNS zone.
D. Modify the smart host settings.
E. Install Windows Server 2008 R2.
F. Add a mail exchanger (MX) record to the public DNS zone.
G. Run setup /r:mt.
H. Run setup /rps:server5.
I. Modify the Internet Information (IIS) authentication settings.
J. Install Windows 7.
K. Run setup /nprs:server5.
L. Run setup /mode:upgrade.

Correct Answer: D

QUESTION 64
You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table:
All users access their mailbox using Microsoft Outlook 2010. Users report that they cannot download their offline address book (OAB). You verify that the users can successfully connect to their mailbox. You need to identify what is preventing users from downloading the OAB. Which cmdlet should you run?

A. Test-MapiConnectivity.
B. Test-MailFlow.
C. Test-SmtpConnectivity.
D. Test-ServiceHealth.
E. Get-MailboxStatistics.
F. Test-OutlookWebServices.
G. Get-MailboxFolderStatistics.
H. Get-MailboxDatabase.
I. Test-MRSHealth.
J. Get-Transport.
K. Get-Message.

Correct Answer: F

**QUESTION 65**

You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table.

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access</td>
<td>New York</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access</td>
<td>Montreal</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>

All users access their mailbox using Microsoft Outlook 2010. You discover that email messages take a long time to be delivered to the Internet. You also discover that there are many email messages waiting in transport queues. You need to identify how long it takes for an email message to be delivered from Server2 to Server5. Which cmdlet should you run?
A. Test-MRSHealth.
B. Test-SmtpConnectivity.
C. Get-MailboxDatabase.
D. Get-Message.
E. Get-MailboxFolderStatistics.
F. Get-MailboxStatistics.
G. Test-MapiConnectivity.
H. Get-TransportServer.
I. Test-MailFlow.
J. Test-OutlookWebServices.
K. Test-ServiceHealth.

Correct Answer: I

**QUESTION 66**
The Exchange organization contains 500 mailboxes. All of the mailboxes are stored on a mailbox
database named DB1. You have a distribution group named Assistants and a Mailbox-enabled user
named Manager. You configure the members of Assistants to moderate the email messages sent
to Manager. You need to prevent the email messages sent by the Assistants members to Manager
from being moderated. Which PowerShell cmdlet should you use?

A. New-ManagementRole.
B. New-MailboxAuditSearchLog.
C. New-RoleAssignementPolicy.
D. New-ManagementRoleAssignment.
E. Add-MailboxPermission.
F. Add-ADPermission.
G. New-RoleGroup.
H. New-ManagementRoleEntry.
I. Set-Mailbox.
K. New-EmailAddressPolicy.
L. Set-DistributionGroup.
M. Add-ManagementRoleEntry.

Correct Answer: I

**QUESTION 67**
You have an Exchange Server SP1 organization. The organization contains five servers. The servers
are configured as shown in the following table.
All users access their mailbox by using Microsoft Outlook 2010. You need to identify the 50 largest mailboxes in database 1. The solution must use the minimum amount of administrative effort. Which cmdlet should you run?

A. Test-MapiConnectivity.
B. Test-SmtpConnectivity.
C. Test-OutlookWebServices.
D. Test-ServiceHealth.
E. Get-MailboxStatistics.
F. Test-MailFlow.
G. Get-Message.
H. Get-TransportServer.
I. Get-MailboxDatabase.
J. Get-MailboxFolderStatistics.
K. Test-MRSHealth.

Correct Answer: E

QUESTION 68
You have an Exchange Server SP1 organization. The organization contains five servers. The servers are configured as shown in the following table.

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Mailbox</td>
<td>Mailbox Database 1</td>
</tr>
<tr>
<td>Server2</td>
<td>Hub Transport</td>
<td>Not applicable</td>
</tr>
<tr>
<td>Server3</td>
<td>Client Access</td>
<td>Not applicable</td>
</tr>
<tr>
<td>Server4</td>
<td>Client Access</td>
<td>Not applicable</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>Not applicable</td>
</tr>
</tbody>
</table>

All users access their mailbox by using Microsoft Outlook 2010. You enable litigation hold for a user named User1. You need to identify the number of email messages in litigation hold for user1. Which cmdlet should you run?

A. Test-MRSHealth.
C. Get-Message.
D. Test-ServiceHealth.
E. Get-MailboxDatabase.
F. Get-MailboxStatistics.
G. Get-MailboxFolderStatistics.
H. Test-MailFlow.
I. Test-OutlookWebServices.
J. Test-SmtpConnectivity.
K. Test-MapiConnectivity.

Correct Answer: G

QUESTION 69
Your company has offices in New York and Montreal. Each Office is configured as an Active Directory site. You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access</td>
<td>New York</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access</td>
<td>Montreal</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>

Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server. Server3 contains a public folder database. You deploy Outlook Anywhere. All of the users who connect to their mailbox from the Internet use Outlook Anywhere. All of the users who connect to their mailbox from the internal network use RPC. Some of the users who connect to their mailbox from the Internet report that they are unable to view MailTips. You verify that all of the users who connect to their mailbox from the internal network can view MailTips. You need to ensure that all of the users can view MailTips. What should you modify?

A. The Outlook Web App mailbox policy.
B. The email address policy.
C. The mailbox databases.
D. The EWS virtual directory.
E. The Client Access array.
F. An Attachment Filter agent.
G. The Autodiscover DNS record.
H. The mailbox features.
I. The Exchange ActiveSync mailbox policy.

Correct Answer: D
QUESTION 70
Your company has offices in New York and Montreal. Each office is configured as an Active Directory site. You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access Hub Transport</td>
<td>New York</td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access Hub Transport</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>

Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server. Server3 contains a public folder database. You create a Client Access array named casarray1.contoso.com. You need to ensure that all of the users connect to casarray1.contoso.com when they open their mailbox by using Microsoft Outlook 2010. What should you modify?

A. The mailbox database.
B. The Exchange ActiveSync mailbox policy.
C. An Attachment Filter agent.
D. The mailbox features.
E. The email address policy.
F. The Outlook Web App mailbox policy.
G. The Autodiscover DNS record.
H. The Client Access array.
I. The EWS virtual directory.

Correct Answer: A

QUESTION 71
Your company has offices in New York and Montreal. Each Office is configured as an Active Directory site. You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access Hub Transport</td>
<td>New York</td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access Hub Transport</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>
Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server. Server3 contains a public folder database. You need to prevent users from downloading email attachments from their Windows Phone 7 devices. What should you modify?

A. The mailbox features.
B. The email address policy.
C. The EWS virtual directory.
D. The Autodiscover DNS record.
E. The mailbox databases.
F. The Exchange ActiveSync mailbox policy.
G. The Client Access array.
H. An Attachment Filter agent.
I. The Outlook Web App mailbox policy.

Correct Answer: F

QUESTION 72
Your company has offices in New York and Montreal. Each Office is configured as an Active Directory site. You have an Exchange Server 2010 SP1 organization. The organization contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Server site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access Hub</td>
<td>New York</td>
</tr>
<tr>
<td></td>
<td>Transport</td>
<td></td>
</tr>
<tr>
<td>Server2</td>
<td>Client Access Hub</td>
<td>Montreal</td>
</tr>
<tr>
<td></td>
<td>Transport</td>
<td></td>
</tr>
<tr>
<td>Server3</td>
<td>Mailbox</td>
<td>New York</td>
</tr>
<tr>
<td>Server4</td>
<td>Mailbox</td>
<td>Montreal</td>
</tr>
<tr>
<td>Server5</td>
<td>Edge Transport</td>
<td>New York</td>
</tr>
</tbody>
</table>

Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server. Server3 contains a public folder database. You create a new offline address book (OAB) for each office. You need to ensure that the users in each office download the OAB created for the respective office. What should you modify?

A. The Outlook Web App mailbox policy.
B. The email address policy.
C. The Autodiscover DNS record.
D. The Client Access array.
E. The Exchange ActiveSync mailbox policy.
F. The mailbox database.
G. The EWS virtual directory.
H. An Attachment Filter agent.
I. The mailbox features.

**Correct Answer: F**

**QUESTION 73**
You have an Exchange Server 2010 SP1 organization. The organization contains two Mailbox servers that are members of a database availability group (DAG). The DAG is configured to use a static IP address. You need to change the IP address of the DAG. Which tool should you use?

A. The Set-DatabaseAvailabilityGroup cmdlet.
B. The Exchange Control Panel (ECP).
C. The Set-DatabaseAvailabilityGroupServer cmdlet.
D. The Set-MailboxServer cmdlet.

**Correct Answer: A**

**QUESTION 74**
Your network contains an Exchange Server 2010 SP1 organization named contoso.com. The organization contains a Client Access server name server1.contoso.com and a domain controller named dc1.contoso.com. All external users access their calendar and view their email messages by using a web browser. The users report that they are required to type their domain name when they log in to their mailbox. You need to ensure that the users are NOT required to type their domain name when they log on. What should you do?

A. Modify the properties of the Client Access server object.
B. Modify the Casredirect.aspx file.
C. Run the Set-Imapsettings cmdlet.
D. Modify the properties of the Exchange ActiveSync virtual directory.
E. Run the New-OwaMailboxPolicy cmdlet.
F. Modify the Redirect.aspx file.
G. Run the New-ActiveSyncMailboxPolicy cmdlet.
H. Modify the properties of the OWA virtual directory.
I. Run the Export-ExchangeCertificate cmdlet.
J. Run the Set-OfflineAddressBook cmdlet.
K. Modify the properties of the offline address book (OAB) virtual directory.
L. Run the Set-PopSettings cmdlets.

**Correct Answer: H**

**QUESTION 75**
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1
installed. The network contains two Active Directory sites named Site1 and Site2. Only Site1 is connected to the Internet. Site1 contains five Client Access servers and a Client Access server array named array1.contoso.com. Users connect to their mailboxes by using Outlook Web App (OWA) from the internal network and from the Internet. You plan to deploy two Client Access servers and a Client Access server array in Site2. You need to configure the namespaces for the OWA virtual directories. What should you do on all of the Client Access servers in Site2?

A. Set the InternalURL to array2.contoso.com. Set the ExternalURL to array1.contoso.com.
B. Set the InternalURL to the Client Access server name. Set the ExternalURL to array1.contoso.com.
C. Set the InternalURL to the Client Access server name. Set the ExternalURL to $null.
D. Set the InternalURL to array2.contoso.com. Set the ExternalURL to $null.

Correct Answer: D

QUESTION 76
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The organization is authoritative for a domain named nwtraders.com. You create a federated trust. You need to ensure that the federated partner servers can locate the Client Access servers in the organization. Which record should you create in the external DNS zone?

A. a TXT record for nwtraders.com
B. a CNAME record for nwtraders.com
C. an A record for autodiscover.nwtraders.com
D. an SRV record for _federation._TCP.nwtraders.com

Correct Answer: B

QUESTION 77
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. All users have Windows Mobile 6.5 devices that connect to the organization by using Exchange ActiveSync. A user named User1 reports that she lost her device and successfully performed a remote wipe of the device. User1 later reports that she located her device. User1 configures the device to connect to Exchange ActiveSync and discovers that the connection fails. You need to ensure that User1 can connect her device by using Exchange ActiveSync. What should you do?

A. Instruct User1 to perform a hardware reset on the device.
B. Instruct user1 to use the Exchange Control Panel (ECP) to modify the device list.
C. Run the Set-ActiveSyncDeviceAccessRule cmdlet from the Exchange Management Shell.
D. Instruct User1 to change her user account password.
QUESTION 78
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to prevent a user named User1 from using Outlook Web App (OWA) to access his mailbox. What should you do?

A. From the properties of User1's mailbox, modify the mailbox settings.
B. From the properties of User1's mailbox, modify the mailbox features.
C. Create a new OWA Mailbox Policy
D. Modify the default OWA mailbox policy

Correct Answer: B

QUESTION 79
Your network contains one Exchange Server 2010 SP1 Client Access server named Server1. You have a user named User1. You need to limit the size of the attachments that User1 can download by using Windows Mobile 6.5 devices. What should you do first?

A. Create a new Exchange ActiveSync device access rule.
B. Create a new managed content settings.
C. Modify the message size restriction for user1.
D. Create new Exchange ActiveSync mailbox policy.

Correct Answer: D

QUESTION 80
You have an Active Directory forest that contains one domain named contoso.com. The functional level of both the forest and the domain is Windows Server 2003. You have an Exchange Server 2003 organization. All servers have Exchange Server 2003 SP2 installed. You plan to transition to Exchange Server 2010. You need to prepare the Active Directory environment for the deployment of the first Exchange Server 2010 SP1 server. What should you run?

A. Setup.com /preparedomain
B. Setup.com /preparead
C. Setup.com /preparelegacyexchangepermissions
D. Setup.com /prepareschema

Correct Answer: B
QUESTION 81
You have an Exchange Server 2010 organization that contains five Mailbox servers. The Active Directory domain contains five domain controllers in a single site. You create a new mailbox database. You discover that the database fails to mount. You need to ensure that the database mounts as soon as possible. What should you do?

A. Force the replication of the Active Directory Domain partition between all of the domain controllers.
B. Configure all domain controllers as global catalog servers.
C. Force the replication of the Active Directory Configuration partition between all of the domain controllers.
D. Install the Exchange Server 2010 Administration tools on a domain controller.

Correct Answer: C

QUESTION 82
You have an Exchange Server 2010 organization. The network contains the computers shown in the following table:

<table>
<thead>
<tr>
<th>Computer name</th>
<th>Operating system</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer 1</td>
<td>Windows Vista Ultimate x86 SP2</td>
</tr>
<tr>
<td>Computer 2</td>
<td>Windows Vista Business x64 SP2</td>
</tr>
<tr>
<td>Computer 3</td>
<td>Windows 7 Enterprise x64</td>
</tr>
<tr>
<td>Computer 4</td>
<td>Windows 7 Business x86</td>
</tr>
<tr>
<td>Computer 5</td>
<td>Windows XP Professional x64 SP3</td>
</tr>
</tbody>
</table>

You need to identify which computers can run Exchange Server 2010 SP1 management tools. Which two computers should you identify? (Each correct answer presents part of the solution. Choose two).

A. Computer5
B. Computer1
C. Computer3
D. Computer2
E. Computer4

Correct Answer: CD
QUESTION 83
You have an Exchange Server 2010 SP1 server that hosts a public folder database named PUBLIC. You need to move the transaction log files of PUBLIC. Which cmdlet should you run?

A. Move-DatabasePath.  
B. Move-StorageGroupPath.  
C. Set-PublicFolderDatabase.  
D. Set-MailPublicFolder.

Correct Answer: A

QUESTION 84
You have an Exchange organization that contains Exchange Server 2003 SP2 servers. All servers are members of one Administrative Group and one Routing Group. You plan to transition the organization to a hosted Exchange Server 2010 environment. You need to prepare the Exchange organization for the deployment of Exchange Server 2010 Mailbox, Client Access and Hub Transport servers. What should you do first?

A. Delete all Recipient Update Service (RUS) objects.  
B. Modify the Active Directory schema.  
C. Disable the LinkState updates.  
D. Create a Routing Group connector.

Correct Answer: B

QUESTION 85
You plan to install Exchange Server 2010 SP1 servers in an existing Exchange Server 2007 organization. All servers will co-exist in a single Active Directory site. You need to identify which role must be transitioned to Exchange Server 2010 first. Which role should you identify?

A. Client Access.  
B. Hub Transport.  
C. Mailbox.  
D. Unified Messaging (UM).

Correct Answer: A

QUESTION 86
You have an Exchange Server 2003 organization. You install a new Exchange Server 2010 SP1 server in the organization. You need to ensure that you can modify the default email address policy by using the Exchange Management Console (EMC). What should you do?
A. From the Exchange System Manager, modify the properties of the default recipient policy.
B. Run the Update-EmailAddressPolicy cmdlet.
C. From the Exchange Management Console, select the email Address Policies tab, right-click Default Policy, and then click Apply.
D. Run the Set-EmailAddressPolicy cmdlet.

Correct Answer: D

QUESTION 87
You have a server that runs Windows Server 2008 SP2. You plan to install Exchange Server 2010 SP1 on the server. You need to install the Exchange Server 2010 SP1 pre-requisites for the Mailbox, Client Access, and Hub Transport server roles. What should you do from the server?

A. Install Microsoft .NET Framework 3.5 SP1
   Install Windows Management Framework
   Install the Web Server role
   Install the RPC over HTTP Proxy component
   Run ServerManagerCmd.exe -IP Exchange-Typical.xml

B. Install Microsoft .NET Framework 3.5 SP1
   Install Windows Management Framework
   Install Message Queuing
   Install the Web Server role
   Run ServerManagerCmd.exe -IP Exchange-Typical.xml

C. Install Microsoft .NET Framework 3.5 SP1
   Install Windows Remote Management (WinRM) 2.0
   Run ServerManagerCmd.exe -IP Exchange-Base.xml

D. Install Microsoft .NET Framework 3.5 SP1
   Install Windows Remote Management (WinRM) 2.0
   Run ServerManagerCmd.exe -IP Exchange-Typical.xml

Correct Answer: A

QUESTION 88
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You create a retention policy and apply the policy to all of the mailboxes in the organization. You need to ensure that users can use personal tags that are not linked to the retention policy. What should you do?

A. Run the Set-Mailbox -identity "user1" -SingleItemRecoveryEnabled $true command.
B. Create a Retention Policy Tag that uses the Personal Folders tag type.
C. Run the Set-RetentionPolicyTag | Set-RetentionPolicyTag -RetentionEnabled $false command.
D. Run the Set-RetentionPolicyTag -identity "never delete" -type Personal command.
E. Run the Set-RetentionPolicyTag -identity "never delete" -type All command.
F. Modify the management role groups.
G. Create a Retention Policy Tag that uses the all other folders tag type.
H. Run the Set-Mailbox -identity "user1" -RetentionHoldEnabled $true command.
I. Modify the User Role Assignment Policy.

Correct Answer: I

QUESTION 89
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You create a retention policy and apply the policy to all of the mailboxes in the organization. You need to add a default policy tag to a retention policy. The tag must move all email messages automatically to a Personal Archive six months after the messages are received. What should you do first?

A. Run the Set-Mailbox -identity "user1" -RetentionHoldEnabled $true command.
B. Create a Retention Policy Tag that uses the Personal Folders tag type.
C. Run the Set-RetentionPolicyTag -identity "never delete" -type Personal command.
D. Modify the management role groups.
E. Create a Retention Policy Tag that uses the all other folders tag type.
F. Modify the User Role Assignment Policy.
G. Run the Set-RetentionPolicyTag -identity "never delete" -type All command.
H. Run the Set-RetentionPolicyTag | Set-RetentionPolicyTag -RetentionEnabled $false command.
I. Run the Set-Mailbox -identity "user1" -SingleItemRecoveryEnabled $true command.

Correct Answer: E

QUESTION 90
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. All users use Microsoft Outlook 2010. A user named User1 reaches her mailbox size limit. You need to ensure that User1 can archive email messages located in her mailbox and read the archived messages when she works offline. What should you create for User1?

A. An offline store (OST) file.
B. A Personal Archive.
C. A personal folder (PST) file.
D. A managed folder mailbox policy.

Correct Answer: C
QUESTION 91
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. The network contains an internal root certification authority (CA). Users on the network use Outlook Anywhere. A Client Access server uses a wildcard certificate issued by a trusted third-party root CA. You need to ensure that users can send and receive encrypted email messages using S/MIME. What should you do?

A. Instruct all users to import the third-party root CA certificate.
B. Import the internal root CA certificate to the Client Access server.
C. Instruct all users to import the internal root CA certificate.
D. Issue a certificate to each user from the internal root CA.

Correct Answer: D

QUESTION 92
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. An external user reports that when he sends email messages to the organization, they are not received. You suspect that the email messages he sends are getting incorrectly identified as spam. You need to identify which anti-spam filter is blocking the email messages. What should you do?

A. Modify the protocol logging level, and then review the protocol logs.
B. Modify the connectivity log settings, and the review the connectivity logs.
C. Modify the message tracking settings, and then review the message tracking logs.
D. Enable pipeline tracing and then review the trace.

Correct Answer: D

QUESTION 93
You have an Exchange organization. All servers in the organization have Exchange Server 2010 SP1 installed. You need to prevent external organizations that do not have sender policy framework (SPF) records from sending e-mail messages to the organization. What should you configure?

A. Sender reputation.
B. Sender ID filtering.
C. An IP block list provider.
D. Sender filtering.

Correct Answer: B
QUESTION 94
You have an Exchange Server 2010 SP1 organization that contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Network</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBX1</td>
<td>Mailbox</td>
<td>Internal</td>
</tr>
<tr>
<td>Hub1</td>
<td>Hub Transport</td>
<td>Internal</td>
</tr>
<tr>
<td>Hub2</td>
<td>Hub Transport</td>
<td>Internal</td>
</tr>
<tr>
<td>Edge1</td>
<td>Edge Transport</td>
<td>Perimeter</td>
</tr>
<tr>
<td>Edge2</td>
<td>Edge Transport</td>
<td>Perimeter</td>
</tr>
</tbody>
</table>

You deploy a farm of application servers that send email messages to Internet recipients. The application servers are configured to send the email messages through the Hub Transport servers. You deploy a load balancing solution for the Hub Transport servers. You need to ensure that only the application servers can relay email messages to Internet recipients over SMTP. What should you do? (Choose all that apply).

A. Create a new Receive connector.
B. Create an Edge Transport rule.
C. Run the Set-TransportServer cmdlet.
D. Create a new Send connector.
E. Create a Hub Transport rule.

Correct Answer: ABE

QUESTION 95
Your network contains an Active Directory forest named fabrikam.com. The forest contains an Active Directory site named Denver. You have an Exchange Server 2010 SP1 organization. You have a Client Access server named CAS1. You need to ensure that you can install Outlook Anywhere on CAS1. The Solution must minimize the number of features installed on CAS1. Which features should you install on CAS1?

To answer, select the appropriate feature or features in the answer area.
A. RPC over HTTP Proxy.
B. SMTP Server.
C. Message Queuing.
D. Failover Clustering.

Correct Answer: A

QUESTION 96
You have an Exchange Server 2010 SP1 organization. Users connect to the organization from Outlook Web App by using the webmail.contoso.com fully qualified domain name (FQDN). You need to recreate the OWA virtual directory on a server that runs Exchange Server 2010 SP1. The solution must ensure that users can connect to Outlook Web App by using the webmail.contoso.com FQDN. What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

A. From Server Manager, reinstall the Web Server (IIS) server role.
B. From the Exchange Management Shell, run the New-OwaMailboxPolicy cmdlet.
C. From the Exchange Management Shell, run the New-OwaVirtualDirectory cmdlet.
D. From the Exchange Management Shell, run Import-ExchangeCertificate cmdlet.
E. From the Exchange Management Shell, run the Remove-OwaVirtualDirectory cmdlet.
F. From the Exchange Management Console (EMC), modify the properties of the OWA virtual directory.

Correct Answer: CEF
QUESTION 97
Your network contains an Exchange Server 2010 SP1 organization named fabrikam.com. You have two mailbox-enabled users named User1 and User2. You need to perform the following tasks:

- Ensure that User2 can send email messages as User1.
- Ensure that an entry is logged on the server each time User2 sends a message as User1.
- Review the list of logged email messages.

What should you do?

A. Create a new Hub Transport rule.
B. Create a retention policy.
C. Enable litigation hold for User1.
D. Modify User1 by using the Set-Mailbox cmdlet.
E. Modify User2 by using the Set-Mailbox cmdlet.
F. Assign permissions to User2 by using the Add-ADPermission cmdlet.
G. Run a non-owner mailbox access report from the Exchange Control Panel (ECP).
H. Assign permissions to User1 by using the Add-ADPermission cmdlet.
I. Review the Application log from Event Viewer.

Correct Answer: DHI
QUESTION 98
Your network contains an Active Directory forest named contoso.com. The forest contains an Exchange Server 2010 SP1 organization. A partner company has an Exchange Server 2010 SP1 organization. You need to implement federated delegation between your organization and the partner organization. What should you do first?

A. Create a federation trust.
B. Install the Federation Service Proxy role service.
C. Create a forest trust.
D. Install the Federation Service role service.

Correct Answer: A

QUESTION 99
You have an Exchange Server 2010 SP1 organization. All mailbox-enabled users access their mailbox by using Microsoft Outlook 2010. You create a custom message classification. You need to ensure that all of the mailbox-enable users can use the message classification from Outlook 2010. What should you do? (Choose all that apply).

A. Create a retention policy.
B. Deploy Classifications.xml to each client computer.
C. Create a retention tag.
D. Modify the Outlook 2010 profile settings of each mailbox-enabled user.
E. Modify the registry of each client computer.
F. Create a transport rule that uses the message classification as a condition.

Correct Answer: BE

QUESTION 100
You have an Exchange Server 2010 SP1 organization that contains five servers. The servers are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Network</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hub1</td>
<td>Hub Transport</td>
<td>Internal</td>
</tr>
<tr>
<td>Hub2</td>
<td>Hub Transport</td>
<td>Internal</td>
</tr>
<tr>
<td>Edge1</td>
<td>Edge Transport</td>
<td>Perimeter</td>
</tr>
<tr>
<td>Edge2</td>
<td>Edge Transport</td>
<td>Perimeter</td>
</tr>
</tbody>
</table>

You enable safelist aggregation. You need to verify whether Edge1 and Edge2 received the list of safe senders. Which tool should you use?
A. Active Directory Service Interfaces Editor (ADSI Edit).
B. The Test-ReplicationHealth cmdlet.
C. The Exchange Control Panel (ECP).
D. The Exchange Management Console (EMC).

Correct Answer: A

QUESTION 101
You have an Exchange Server 2010 SP1 organization that contains an Edge Transport server. The server is located in the perimeter network and contains an Edge Subscription. Your company has a security policy that has the following requirements:

- All email messages sent to the organization must be archived on a company-owned server.
- After the email messages are archived, the messages must be forwarded to a hosted anti-spam service provider.

You need to configure the Exchange organization to meet the requirement of the security policy. What should you do?

A. Delete the default Receive connector.
B. Link the RECEIVE_CUSTOM Receive connector to the Delivery Agent connector.
C. Link the RECEIVE_CUSTOM Receive connector to the PROVIDER Send connector.
D. Create a Delivery Agent connector.
E. Create a Send connector named PROVIDER that has a custom address space.
F. Create a Foreign connector named FOREIGN that has a custom address space.

Correct Answer: CE
QUESTION 102
You need to modify the internal URL of the Exchange ActiveSync virtual directory. Which node should you select from the Exchange Management Console (EMC) to make the modification?

To answer, select the appropriate node in the answer area.

Correct Answer: A

QUESTION 103
You have an Exchange Server 2010 SP1 organization named contoso.com. The organization contains two Client Access servers named CAS1 and CAS2. CAS1 and CAS2 are members of a Client Access array named casarray1.contoso.com. The hardware on CAS1 fails. You need to restore CAS1. You install Windows Server 2008 R2 on a new server named CAS1. What should you do next?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Correct Answer: A
A. Join CAS1 to contoso.com.
B. Add CAS1 to casarray1.contoso.com.
C. Reset the computer account of CAS1.
D. Create a computer account for casarray1.contoso.com.
E. From the Exchange Server 2010 SP1 installation files, run `setup /r:c`.
F. From the Exchange Server 2010 SP1 installation files, run `setup /m:recoverserver`.

Correct Answer: ACF

**QUESTION 104**

You have an Exchange Server 2010 SP1 organization named contoso.com. You need to ensure that all of the email messages sent between the Exchange mailboxes are Information Rights Management (IRM)-protected automatically. What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
A. Create a journal rule.
B. Create a transport rule.
C. Run the Set-TransportConfig cmdlet.
D. Run the Set-IRMConfiguration cmdlet.
E. Install Active Directory Federation Services (AD FS).
F. Install Active Directory Certificate Services (AD CS).
G. Install Active Directory Rights Management Services (AD RMS).
H. Configure Transport Layer Security (TLS) on all Send connectors.

Correct Answer: BDG

QUESTION 105
Your company has three departments named Sales, Marketing, and Finance. The network contains an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Mailbox, Hub Transport, Client Access</td>
</tr>
<tr>
<td>Server2</td>
<td>Edge Transport</td>
</tr>
</tbody>
</table>

You create an Edge Subscription for Server2. Your company merges with another company named Fabrikam, Inc. You need to ensure that your Exchange organization can receive email for fabrikam.com. What should you create?
A. A new Edge Subscription.
B. A new journal rule.
C. A new Send connector.
D. A Hub Transport rule.
E. A remote domain.
F. An accepted domain.
G. A new organization relationship.
H. An attachment filter entry.
I. A new Receive connector.
J. A new federation trust.

Correct Answer: F

QUESTION 106
Your company has three departments named Sales, Marketing, and Finance. The network contains an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
</tr>
</thead>
</table>
| Server1     | Mailbox  
              | Hub Transport  
              | Client Access  |
| Server2     | Edge Transport      |

You create an Edge Subscription for Server2. You need to ensure that all email messages sent by users in the Sales department include a disclaimer. What should you create?

A. A new Edge Subscription.
B. A new journal rule.
C. A new Send connector.
D. A Hub Transport rule.
E. A remote domain.
F. An Edge Transport rule.
G. A new organization relationship.
H. An attachment filter entry.
I. A new Receive connector.
J. A new federation trust.

Correct Answer: D

QUESTION 107
Your company has three departments named Sales, Marketing, and Finance. The network contains
an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Mailbox</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
</tr>
<tr>
<td></td>
<td>Client Access</td>
</tr>
<tr>
<td>Server2</td>
<td>Edge Transport</td>
</tr>
</tbody>
</table>

You create an Edge Subscription for Server2. You need to ensure that all email messages created by members of the Sales department are approved by the Sales department manager before they are delivered. What should you create?

A. A new Edge Subscription.
B. An accepted domain.
C. An IP Block List Provider.
D. A new Send connector.
E. A new organization relationship.
F. A new journal rule.
G. A remote domain.
H. A Hub Transport rule.
I. A federation trust.
J. A new Receive connector.

Correct Answer: H

QUESTION 108
Your company has three departments named Sales, Marketing, and Finance. The network contains an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Mailbox</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
</tr>
<tr>
<td></td>
<td>Client Access</td>
</tr>
<tr>
<td>Server2</td>
<td>Edge Transport</td>
</tr>
</tbody>
</table>

You create an Edge Subscription for Server2. You need to prevent the company's server from accepting email messages from servers on the Internet that are known to originate spam. What should you add to the organization?

A. A new Send connector.
B. A new Edge Subscription.
QUESTION 109
Your company has three departments named Sales, Marketing, and Finance. The network contains an Active Directory domain named contoso.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Mailbox, Hub Transport, Client Access</td>
</tr>
<tr>
<td>Server2</td>
<td>Edge Transport</td>
</tr>
</tbody>
</table>

You create an Edge Subscription for Server2. You plan to encrypt all of the email sent to a partner company named A. Datum Corporation by using Transport Layer Security (TLS). You need to prepare Server1 for the planned configuration. What should you create?

A. A new federation trust.
B. A new Edge Subscription.
C. A new journal rule.
D. A new organization relationship.
E. An attachment filter entry.
F. An Edge Transport rule.
G. A Hub Transport rule.
H. A new Send connector.
I. A remote domain.
J. A new Receive connector.

Correct Answer: H

QUESTION 110
You have an Exchange Server 2010 Service Pack 1 (SP1) organization. You have a resource mailbox for a meeting room named Meeting Room 1. You need to ensure that when a user schedules a meeting for Meeting Room 1, the user receives an e-mail message that contains directions to the meeting room. Which property tab should you modify?

Correct Answer: E

Download the complete collection of Exam’s Real Q&As  www.ensurepass.com
To answer, select the appropriate tab in the answer area.

A. Mailbox Features.
B. Resource General.
C. Resource Policy.
D. Resource Information.

**Correct Answer: D**

**QUESTION 111**
Your network contains an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization has a single public folder database. You need to prevent all the members of a group named Sales from accessing the public folders from Outlook Web App. What should you do first?

A. From the Exchange Management Console (EMC), create a new Outlook Web App mailbox policy.
B. From the Exchange Management Shell, run the Add-PublicFolderClientPermission cmdlet.
C. From the Exchange Management Console (EMC), modify the Segmentation settings of the OWA virtual directory.
D. From the Exchange Management Shell, run the Set-CasMailbox cmdlet.

**Correct Answer: A**

**QUESTION 112**
Your network contains an Active Directory domain named fabrikam.com. You have an Exchange Server 2010 Service Pack 1 (SP1) organization that contains four servers. The servers are configured as shown in the following table:
Edge1 is located in the perimeter network. You need to replicate the transport configurations to Edge1. What should you do first?

A. From Hub1, run the Get-EdgeSubscription cmdlet and specify the FileName parameter.
B. From Edge1, run the Get-EdgeSubscription cmdlet and specify the FileData parameter.
C. From Hub1, run the New-EdgeSubscription cmdlet and specify the FileData parameter.
D. From Edge1, run the New-EdgeSubscription cmdlet and specify the FileName parameter.

Correct Answer: D

QUESTION 113
You have an internal network and a perimeter network. The network contains the servers configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Network location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Client Access</td>
<td>Internal</td>
</tr>
<tr>
<td></td>
<td>Hub Transport</td>
<td></td>
</tr>
<tr>
<td>Server2</td>
<td>Mailbox</td>
<td>Internal</td>
</tr>
<tr>
<td>Server3</td>
<td>Edge Transport</td>
<td>Perimeter</td>
</tr>
</tbody>
</table>

You need to configure the firewall that separates the internal network and the perimeter network. The configuration must meet the following requirements:

- Ensure that inbound email messages can be relayed to Server1.
- Ensure that outbound email messages can be relayed to Server3.
- Ensure that the list of Exchange recipients is replicated to Server3.
QUESTION 114
You have an Exchange Server 2003 organization that contains a server named EX_Server. You install a server named Server1 that runs Exchange Server 2010 Service Pack 1 (SP1). You create a public folder database on Server1. A user named User1 has a mailbox on Server1. User1 creates a public folder on Server1 and posts content to the public folder. From Outlook Web App, User1 attempts to access the public folders on EX_Server and receives an error message. You need to ensure that User1 can access all of the public folders in the organization from Outlook Web App. What should you do? (Each correct answer presents a complete solution. Choose all that apply).

A. From Exchange System Manager on EX_Server, modify the replica list of the public folders.
B. From the Exchange Management Console (EMC), modify the properties of the Outlook Web App mailbox policy.
C. Instruct User1 to use Outlook Web Access (OWA).
D. From the Exchange Management Shell, run the addreplicatopfrecursive.ps1 script.
E. From the Exchange Management Console (EMC), modify the default public folder database of the mailbox database.

Correct Answer: AD

QUESTION 115
Your network contains an Active Directory domain named contoso.com. The domain contains an Exchange Server 2010 Service Pack 1 (SP1) organization. The domain contains an organizational unit (OU) named Sales. You need to configure Outlook Web App to meet the following requirements:
- Allow only members of the Sales OU to change their password by using the Exchange Control Panel (ECP).
- Prevent all other users from changing their password by using the ECP.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
A. Create a new Outlook Web App mailbox policy named Accounting.

B. Modify the Authentication settings of the ECP virtual directory.

C. From the Exchange Management Shell, run `get-mailbox | where-object {$_-distinguishedname -like '*ou=accounting,dc=contoso,dc=com'} | set-casmailbox -owamailboxpolicy:Accounting`.

E. Run the configure External Client Access Domain wizard.

F. Modify the Segmentation settings of the default Outlook Web App mailbox policy.

G. Modify the Authentication settings of the OWA virtual directory.

Correct Answer: ACF

QUESTION 116
Your network contains an Active Directory forest named fabrikam.com. All servers run Windows Server 2008 R2 SP1. You have two servers named Mail1 and Edge1. Mail1 is located on the internal network. Edge1 is located on the perimeter network. The internal network and the perimeter network are separated by a firewall. You plan to deploy Exchange Server 2010 SP1 to Mail1 and
Edge1. Mail1 will have the Mailbox, Hub Transport, and Client Access server roles installed. Edge1 will have the Edge Transport server role installed. You need to ensure that you can install the Edge Transport server role on Edge1. The solution must minimize the amount of software installed on Edge1. What should you install on Edge1? (Choose all that apply).

A. The Web Server (IIS) server role.
B. The SMTP Server feature.
C. Microsoft .NET Framework 3.5 SP1.
D. Remote Server Administration Tools (RSAT).

Correct Answer: CDE

QUESTION 117
You have a hosted Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You have a user named User1 and a user named User2. You need to ensure that User1 can add User2 to the From field when he sends email messages. Messages that have User2 in the From field must display only User2 as the message sender to recipients who receive the messages. What should you use?

A. Microsoft Outlook.
B. Exchange Management Console (EMC).
C. Active Directory Users and Computers.
D. Exchange Control Panel (ECP).

Correct Answer: B

QUESTION 118
You have a hosted Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You have 3 mailbox servers in a DAG. You want to enable Datacenter Activation Co-ordination on exiting the DAG. Which cmdlet should you use?

A. Set-DatabaseAvailabilityGroup.
B. Get-DatabaseAvailabilityGroup.
C. New-DatabaseAvailabilityGroup.
D. Add-MailboxDatabaseCopy.

Correct Answer: A

QUESTION 119
You have a hosted Exchange organization. All servers in the organization have Exchange Server 2010
Service Pack 1 (SP1) installed. Select the proper DNS record to create when you deploy federated delegation. (Choose all that apply).

A. A record.
B. MX (mail exchange record).
C. MG (mail group record).
D. TXT record.

Correct Answer: AD

QUESTION 120
You have an Exchange 2010 SP1 organization, with servers in the following configuration:

- Server1 - Mailbox, Hub Transport server.
- Server2 - Client Access server.

Server1 holds the public folder database. You deploy a new server named Server4 and Outlook 2010 clients. Which command would you use to ensure that all new public folders are created only on Server4?

A. Set-MailboxDatabase.
B. Remove-StoreMailbox.
C. Get-MailboxDatabase.
D. New-MailboxDatabase.

Correct Answer: A

QUESTION 121
You have an Exchange Server 2010 SP1 organization. You need to ensure that all emails sent to User1 are also delivered to the Compliance mailbox. Which option should you choose?

A. Organization Configuration -> Mailbox.
B. Organization Configuration -> Client Access.
C. Organization Configuration -> Hub Transport.
D. Server Configuration -> Mailbox.
E. Server Configuration -> Client Access.
F. Server Configuration -> Hub Transport.
G. Recipient Configuration -> Mailbox.
H. Recipient Configuration -> Client Access.
I. Recipient Configuration -> Hub Transport.

Correct Answer: G
QUESTION 122
What command would you use to block messages from servers that are known for sending spam?

A. Test-IPBlockListProvider.
B. Set-IPBlockListProvider.
C. Add-IPBlockListEntry.
D. Set-IPAllowListProvider.

Correct Answer: B

QUESTION 123
You have an Exchange 2010 SP1 organization with the following configuration:

- Server1 - Mailbox, Hub Transport server
- Server2 - Client Access server

Server1 holds the public folder database. Which command would you use first to remove the public folder database?

A. Set-MailboxDatabase.
B. Remove-PublicFolder.
C. Remove-PublicFolderDatabase.
D. Get-MailboxDatabase.

Correct Answer: B

QUESTION 124
You deploy a Monitor Server named SrvApp1. You want to allow the server to send notification emails to an administrator through the relay domain. Which option should you use?

A. A Hub Transport rule.
B. A Send connector.
C. A Receive connector.
D. An Edge Subscription.
E. An accepted domain.
F. A remote domain.

Correct Answer: C
QUESTION 125
You need to ensure that 10 new room mailboxes automatically accept meeting requests. Which cmdlet should you run?

A. Set-CalendarNotification.
B. Set-CalendarProcessing.
C. Set-MailboxAutoReplyConfiguration.
D. Set-MailboxCalendarConfiguration.

Correct Answer: B

QUESTION 126
You have an Exchange Server 2003 organization. You install a new Exchange Server 2010 server in the organization. You need to ensure that you can modify the default email address policy by using the Exchange Management Console (EMC). What should you do?

A. Run the Set-EmailAddressPolicy cmdlet.
B. Run the Update-EmailAddressPolicy cmdlet.
C. From the Exchange System Manager, modify the properties of the default recipient policy.
D. From the EMC, select the Email Address Policies tab, right-click Default Policy, and then click Apply.

Correct Answer: A

QUESTION 127
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You need to add a delegate to a room mailbox. What should you do from the properties of the mailbox?

A. Configure the Resource Information settings.
C. Configure the Account settings.
D. Configure the Mailbox Features settings.
E. Configure the Resource Policy settings.
F. Configure the Resource In-Policy settings.
G. Enable the Resource Booking Attendant.
H. Configure the Mail Flow settings.

Correct Answer: E

QUESTION 128
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You need to ensure that a user can use a .pst file to access all of the email messages in a mailbox stored in a recovery database. What should you do?

A. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
B. Create a retention policy and retention tag.
C. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
D. From the properties of the mailbox, enable single item recovery.
E. From the properties of the mailbox server, modify the System Settings.
F. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
G. From the properties of the mailbox database, modify the maintenance schedule.
H. From the properties of the mailbox, enable retention hold.
I. From the properties of the mailbox database, modify the Deletion Settings.
J. From the Exchange Management Shell, run Set-MailboxDatabase -DumpsterStatistics $true.
K. Create a managed custom folder and managed content settings.
L. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
M. From the properties of the mailbox, enable litigation hold.

Correct Answer: A

QUESTION 129
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You create a retention policy and apply the policy to all of the mailboxes in the organization. You need to prevent the retention policy from being applied to a user named User1. What should you do?

A. Create a Retention Policy Tag that uses the Personal Folders tag type.
B. Modify the management role groups.
C. Run the get-retentionpolicytag | set-retentionpolicytag -retentionenabled $false command.
D. Run the set-mailbox -identity 'user1' -retentionholdenabled $true command.
E. Modify the User Role Assignment Policy.
F. Run the set-retentionpolicytag -identity 'never delete' -type Personal command.
G. Run the set-mailbox -identity 'user1' -singleitemrecoveryenabled $true command.
H. Run the set-retentionpolicytag -identity 'never delete' -type all command.
I. Create a Retention Policy Tag that uses the All other folders tag type.

Correct Answer: D

QUESTION 130
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. All servers run Windows Server 2008 R2. The organization contains
Mailbox servers, Client Access servers, and Hub Transport servers only. You need to identify why a server on the Internet rejects email messages sent from users in the organization. What should you do?

A. Review the connectivity logs.
B. Run the Exchange Server User Monitor (ExMon).
C. Run the Get-MailboxFolderStatistics cmdlet.
D. Modify the Log Settings from the properties of the Hub Transport server.
E. Review the Application event log.
F. Run the Set-AdminAuditLogConfig cmdlet.
G. Run the Set-EventLogLevel cmdlet.
H. Run the Get-User cmdlet.
I. Modify the Server Diagnostic Logging Properties.
J. Run the Exchange Best Practices Analyzer.
K. Enable SMTP protocol logging.
L. Run the Get-MailboxStatistics cmdlet.

Correct Answer: K

QUESTION 131
You have an Exchange Server 2010 organization. You need to ensure that items in a user’s Inbox folder that are older than 60 days are moved to a custom folder. What should you do first?

A. Create a managed custom folder.
   Create a transport rule.
B. Create a new mail folder by using Microsoft Office Outlook.
   Create a journal rule.
C. Create a managed custom folder.
   Run the Managed Content Settings wizard from the Inbox managed default folder.
D. Create a new mail folder by using Microsoft Office Outlook.
   Run the Managed Content Settings wizard from the Inbox managed default folder.

Correct Answer: C

QUESTION 132
You have an Exchange Server 2010 organization. You need to prevent internal users from sending messages that contain the phrase "Company Confidential" to external users. What should you create? (Choose two options).

A. A Hub Transport rule.
B. A Managed Folder Mailbox policy.
C. A message classification.
D. A Send connector.

Download the complete collection of Exam’s Real Q&As  www.ensurepass.com
QUESTION 133
You have an Exchange Server 2010 Mailbox server. All users use Microsoft Office Outlook 2010 to access their mailboxes. You implement a policy that automatically deletes email messages that are older than 90 days. You need to provide users with an alternate location to store email messages that are older than 90 days. Administrators must be able to find the messages in both locations when they perform multi-mailbox searches. What should you create?

A. A .pst file for each user that is stored in a shared folder.
B. An archive mailbox for each user.
C. A journal rule.
D. A retention policy.

Correct Answer: B

QUESTION 134
You have an Exchange Server 2010 organization. Users on the network use HTTPS to connect to Outlook Web Access (OWA). The Client Access Server uses a certificate issued by an internal certification authority (CA). You plan to deploy an email encryption solution for all users. You need to ensure that users can send and receive encrypted email messages by using S/MIME from OWA. What should you do?

A. Issue a certificate to each user.
B. Instruct all OWA users to import a root CA certificate.
C. Modify the authentication settings of the OWA virtual directory.
D. Configure the Client Access server to use a certificate issued by a third party CA.

Correct Answer: A

QUESTION 135
Your company has an Exchange Server 2010 Hub Transport server named Hub1. Hub1 receives all email sent to the company from the Internet. You install the anti-spam agents on Hub1. You need to ensure that Hub1 only accepts messages sent to email addresses listed in Active Directory. What should you do?

A. Modify the properties of the Sender Filtering agent.
B. Modify the properties of the Recipient Filtering agent.
C. Modify the properties of the default accepted domain.
D. Modify the properties of the default Receive connector.

Correct Answer: B

QUESTION 136
You have an Exchange Server 2010 organization. You need to configure the organization so that it rejects all e-mail messages that have a spam confidence level (SCL) that is greater than 7. What should you configure?

A. Content filtering.
B. Recipient filtering.
C. Sender filtering.
D. Sender reputation.

Correct Answer: A

QUESTION 137

A. Install the Active Directory Connector (ADC).
B. Delete all Recipient Update Service (RUS) objects.
C. Deploy an Exchange Server 2010 Edge Transport server.
D. Remove all Exchange 2000 servers from the organization.

Correct Answer: D

QUESTION 138
You have an Active Directory forest that contains three sites named Site1, Site2, and Site3. Each site contains two Exchange Server 2007 Client Access servers, two Mailbox servers, and two Hub Transport servers. All Exchange Server 2007 servers have Exchange Server 2007 Service Pack 1 (SP1) installed. You need to ensure that you can deploy Exchange Server 2010 servers in Site1. You must achieve this goal by using the minimum amount of administrative effort. What should you do?

A. Upgrade all Client Access servers in the organization to Exchange Server 2007 Service Pack 2 (SP2).
B. Upgrade all Exchange Server 2007 servers in Site1 to Exchange Server 2007 Service Pack 2 (SP2).
C. Upgrade all Exchange Server 2007 servers in the organization to Exchange Server 2007 Service Pack 2 (SP2).
D. Upgrade all Exchange Server 2007 servers in Site1 and all Client Access servers in the organization to Exchange Server 2007 Service Pack 2 (SP2).

Correct Answer: D

QUESTION 139
You have a server that runs Windows Server 2008 R2. You plan to install Exchange Server 2010 on the server. You need to install the Exchange Server 2010 pre-requisites for the Unified Messaging (UM), Mailbox, Client Access, and Hub Transport server roles. What should you run?

A. Setup.com /AnswerFile:Exchange-All.xml.
B. Setup.com /Roles:HT, MB, UM, CA, MT.
C. ServerManagerCmd.exe -IP Exchange-All.xml.
D. ServerManagerCmd.exe -IP Exchange-CADB.xml.

Correct Answer: C

QUESTION 140
You have a computer that runs Windows 7. You need to install the Exchange 2010 management tools on the computer. What should you do first?

A. Install the telnet client.
B. Run the Exchange Best Practices Analyzer.
C. Set the Net.TCP Port Sharing service to Automatic.
D. Install Microsoft .NET Framework 3.5.1 and the Internet Information Services (IIS) 6.0 Management console.

Correct Answer: D

QUESTION 141
You have an Exchange organization that contains the Exchange servers shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Role</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Front-end</td>
<td>Exchange Server 2003 Service Pack 2 (SP2)</td>
</tr>
<tr>
<td>Server2</td>
<td>Back-end</td>
<td>Exchange Server 2003 SP2</td>
</tr>
<tr>
<td>Server3</td>
<td>Client Access, Mailbox</td>
<td>Exchange Server 2010</td>
</tr>
</tbody>
</table>

Download the complete collection of Exam's Real Q&As  www.ensurepass.com
You plan to move all mailboxes from Server2 to Server3. You need to ensure that all users can send and receive email messages after their mailboxes are moved to Server3. What should you do?

A. Install the Exchange Server 2010 Hub Transport server role.
B. Install the Exchange Server 2010 Edge Transport server role.
C. Remove all Exchange Server 2003 servers.

Correct Answer: A

**QUESTION 142**

You have an Exchange organization. The Exchange servers in the organization are configured as shown in the following table:

<table>
<thead>
<tr>
<th>Server name</th>
<th>Exchange version</th>
<th>Role</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server1</td>
<td>Exchange Server 2007</td>
<td>Client Access server</td>
</tr>
<tr>
<td>Server2</td>
<td>Exchange Server 2007</td>
<td>Hub Transport server</td>
</tr>
<tr>
<td>Server3</td>
<td>Exchange Server 2007</td>
<td>Mailbox server</td>
</tr>
</tbody>
</table>

You deploy a new Exchange Server 2010 Client Access server named Server4 and successfully update the required DNS records for Server4. You need to ensure that all users on Server3 can successfully access their mailboxes by using Exchange ActiveSync. What should you do?

A. On Server1, set the authentication type for the Microsoft-Server-ActiveSync virtual directory to Integrated Windows Authentication.
B. On Server1, set the authentication type for the Microsoft-Server-ActiveSync virtual directory to anonymous.
C. From the Exchange Management Shell on Server4, run New-ActiveSyncDeviceAccessRule
   QueryString " *" -Characteristic DeviceModel AccessLevel Allow.
D. From the Exchange Management Shell on Server3, run Set-ActiveSyncVirtualDirectory
   -Identity "Server3\Microsoft-Server-ActiveSync (default web site)"
   -BasicAuthentication:$true.

Correct Answer: A

**QUESTION 143**

You have an Exchange Server 2010 server that has the Mailbox, Hub Transport, and Client Access server roles installed. You need to ensure that users can send and receive email by using Windows Live Mail or Microsoft Outlook Express. What should you do on the server?
A. Install and then configure the SMTP server feature.
B. Start the Microsoft Exchange POP3 service and then set the startup type to Automatic.
C. Modify the properties of the MSExchangePOP3 (TCP-in) Windows Firewall rule.
D. Modify the properties of the MSExchangeMailSubmission - RPC (TCP-in) Windows Firewall rule.

Correct Answer: B

QUESTION 144
You have an Exchange Server 2010 server named Server1. Server1 hosts a mailbox database named DB1 that contains 25 user mailboxes. You create a new public folder database named PUB2. You need to configure PUB2 as the default public folder database for each mailbox on DB1. Which properties should you modify?

A. Modify the properties of each mailbox.
B. Modify the properties of DB1.
C. Modify the properties of Server1.
D. Modify the properties of PUB2.

Correct Answer: B

QUESTION 145
You have an Exchange Server 2010 server that has a single mailbox database named DB1. You need to move the transaction log files of DB1. Which cmdlet should you run?

A. Move-DatabasePath.
B. Movemailbox.
C. Set-ExchangeServer.
D. Set-MailboxDatabase.

Correct Answer: A

QUESTION 146
You have an Exchange Server 2010 server named Server1. Server1 has a single mailbox database named DB1. You configure deleted items to be retained for 30 days. You need to ensure that each item that passes the retention period is removed daily between 2:00 and 6:00. What should you do?

A. Run the Set-RetentionPolicy cmdlet.
B. Run the Start-ManagedFolderAssistant cmdlet.
C. Modify the maintenance schedule for DB1.
D. Modify the messaging records management (MRM) schedule for Server1.
Correct Answer: C

QUESTION 147
You have an Exchange Server 2010 server named Server1. Server1 has a single mailbox database named DB1 that contains 300 mailboxes. You need to ensure that a warning message is issued when a mailbox exceeds 2 GB. The solution must use the minimum amount of administrative effort. What should you do?

A. From the properties of DB1, configure options on the Limits tab.
B. From the properties of each mailbox, modify the storage quotas.
C. From the properties of Server1, configure options on the Messaging Records Management tab.
D. From Managed Default Folders, modify the properties of the Entire Mailbox managed folder.

Correct Answer: A

QUESTION 148
You have an Exchange Server 2010 organization that contains 1,500 mailboxes. The average size of each mailbox is a 750 MB. All users run either Microsoft Office Outlook 2010 or Outlook Web App to access their email. All users who run Outlook 2010 are configured to use Cached Exchange Mode. You need to configure a mailbox solution for the organization to meet the following requirements:

• Ensure that administrators can search and find any message.
• Reduce the size of the offline store (OST) for each user.
• Provide access to all email messages by using either Outlook 2010 or Outlook Web App.

What should you do?
A. Create a Personal Archive for each user and then create a retention policy. Instruct users to compact the OST file.
B. Create a personal folder (PST) file for each user. Store all PST files on a network share. Instruct users to compact the OST file.
C. Create a second disabled user account and a second mailbox for each user. Configure journal rules to journal all the messages for each user to the user’s second mailbox.
D. Create a new disabled user account and a new mailbox named Journaling Mailbox. Configure journal rules to journal all the messages for each user to Journaling Mailbox.

Correct Answer: A

QUESTION 149
You have an Exchange Server 2007 organization. You install a new Exchange Server 2010 Mailbox server. You need to move all mailboxes to the Exchange Server 2010 server. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two).

Download the complete collection of Exam’s Real Q&As  www.ensurepass.com
A. From the Exchange Server 2007 Exchange Management Shell, run the Movemailbox cmdlet.
B. From the Exchange Server 2010 Exchange Management Shell, run the New-MoveRequest cmdlet
C. From the Exchange Server 2007 Exchange Management Console (EMC), run the Move Mailbox wizard.
D. From the Exchange Server 2010 Exchange Management Console (EMC), run the New Local Move Request wizard.

Correct Answer: BD

QUESTION 150
You have an Active Directory domain named contoso.com. You have an Exchange Server 2010 organization. You have a server named Server1 that runs Windows Server 2008 R2 and has the Exchange 2010 management tools and Microsoft Office Outlook 2010 installed. A support technician named User1 performs management tasks on Server1. From the Exchange Management Shell on Server1, User1 runs Export-Mailbox -Identity User2@contoso.com -PSTFolderPath E:\PSTFiles\User2.pst and receives the following error message:

“The term ‘Export-Mailbox’ is not recognized as the name of a cmdlet, function, script, or operable program. Check the spelling of the name, or if a path was included, verify that the path is correct and try again.”

You need to ensure that User1 can successfully run the command. What should you do?

A. Assign User1 the Mailbox Import Export role.
B. Assign User1 Full Access permissions for the mailbox of User2.
C. Add User1 to the Recipient Management security group.
D. Add User1 to the View-Only Organization Management security group.

Correct Answer: A

QUESTION 151
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. You need to ensure that a room mailbox automatically accepts meeting requests. What should you do?

A. Modify the mailbox permissions.
B. Enable moderation for the mailbox.
C. Assign a managed folder mailbox policy.
D. Enable the Resource Booking Attendant.
QUESTION 152
You have an Exchange 2010 organization. The organization contains a distribution group named Group1. You need to ensure that a user named User1 can add and remove members from Group1. You must prevent User1 from modifying all other groups. What should you do first?

A. Add User1 to Group1’s Managed by list.
B. Assign User1 as a group moderator for Group1.
C. Assign the Distributions Groups management role to User1.
D. Assign the MyDistributionGroups management role to User1.

Correct Answer: A

QUESTION 153
You have an Exchange Server 2010 organization named contoso.com. All users configure internal and external Out Of Office messages. You need to ensure that internal Out Of Office messages are sent to senders from the fabrikam.com domain. What should you create and configure?

A. A new accepted domain.
B. A new Receive connector.
C. A new remote domain.
D. A new Send connector.

Correct Answer: C

QUESTION 154
You have an Exchange Server 2010 organization named contoso.com. Your company acquires a company named Fabrikam, Inc. You plan to create new mailboxes for each user from Fabrikam. You need to ensure that each new mailbox can receive email messages sent to fabrikam.com. The solution must not prevent the organization from receiving emails sent to contoso.com. What should you do?

A. Create an accepted domain and then create a new email address policy.
B. Create a remote domain and then modify the default email address policy.
C. Create a Receive connector and then create a managed folder mailbox policy.
D. Modify the default accepted domain and then modify the default email address policy.

Correct Answer: A

QUESTION 155
You have an Exchange Server 2010 organization. Your network contains an Edge Transport server
named Edge1 and a Hub Transport server named Hub1. You configure EdgeSync synchronization between Hub1 and Edge1. A month later, you install a second Hub Transport server named Hub2 in the same Active Directory site. You need to ensure that Edge1 synchronizes information from Hub1 and Hub2. What should you do?

A. Create a new subscription file and then import the new subscription file to Hub1 and Hub2.
B. Remove the Edge Subscription from Edge1 and then run the ImportEdgeConfig.ps1 script on Hub2.
C. Copy the subscription file from Hub1 to Hub2 and then run the New-EdgeSubscription cmdlet on Hub2.
D. Move Hub2 to a separate Active Directory site. Create a new subscription file on Edge1 and then run the New-EdgeSubscription cmdlet on Hub2.

Correct Answer: A

**QUESTION 156**

You have an Exchange Server 2003 organization. You install an Exchange Server 2010 Edge Transport server on the network. You need to ensure that the Edge Transport server can send and receive email messages from the Internet for the organization. You configure the Exchange Server 2003 servers to send all emails for external recipients to the Edge Transport servers. What should you do next?

A. Create and configure a sharing policy.
B. Install the Exchange Server 2010 schema extensions.
C. Create an Edge Subscription file. Copy the file to the Exchange Server 2003 servers.
D. Create and configure a Send connector on the Edge Transport server. Create and configure a Receive connector on the Edge Transport server.

Correct Answer: D

**QUESTION 157**

You have an Exchange 2010 organization named contoso.com. The organization contains two servers named Server1 and Server2. Server1 has the Client Access, Hub Transport, and Mailbox server roles installed. Server2 has the Edge Transport server role installed. You need to verify whether Server2 successfully replicates recipient data and configuration information from Server1. What should you do?

A. From Server2, run the Test-ReplicationHealth cmdlet.
B. From Server2, run the Get-OrganizationConfig cmdlet.
C. From Server1, run the Test-EdgeSynchronization cmdlet.
D. From Server1, run the Get-EdgeSyncServiceConfig cmdlet.
QUESTION 158
You install an Exchange Server 2010 Hub Transport server named Hub1. You need to ensure that Hub1 can receive email messages sent from Internet hosts. What should you do?

A. Enable the Anonymous user’s permission group for the Client Hub1 Receive connector.
B. Enable the Anonymous user’s permission group for the Default Hub1 Receive connector.
C. Create a Receive connector and set the intended use to Client. Modify the port for the connector.
D. Create a Receive connector and set the intended use to Custom. Modify the remote IP addresses range for the connector.

Correct Answer: B

QUESTION 159
You have an Exchange Server 2010 organization named contoso.com that contains a mail-enabled group named Group1. Users from outside the organization report that email messages sent to group1@contoso.com generate a non-delivery report (NDR). You need to ensure that users outside the organization can successfully send email to group1@contoso.com. What should you modify?

A. The authentication settings for the Client Receive connector.
B. The message delivery restrictions for Group1.
C. The moderation settings for Group1.
D. The remote IP address range for the Client Receive connector.

Correct Answer: B

QUESTION 160
You need to modify the Exchange-specific cost for a site link named Link1. What should you do?

A. From the Exchange Management Shell, run the Set-ADSite cmdlet.
B. From the Exchange Management Shell, run the Set-ADSiteLink cmdlet.
C. From the Active Directory Sites and Services snap-in, create a site link bridge.
D. From the Active Directory Sites and Services snap-in, modify the properties of Link1.

Correct Answer: B

QUESTION 161
You have an Exchange Server 2010 Mailbox server that contains multiple mailbox databases. You
need to ensure that you receive an email alert if the volume that contains the mailbox database files has less than 25 percent of free space. What should you do?

A. Create a new Data Collector Set.
B. Create a new Event Viewer Subscription.
C. Attach a new task to the Application event log.
D. Modify the properties of the mailbox database objects.

Correct Answer: A

QUESTION 162
You have an Exchange Server 2010 organization. An internal user named User1 sends a message to another internal user named User2. User1 does not have any administrative privileges in the organization. User1 needs to identify whether the message was successfully delivered. What should you instruct User1 to do?

A. Open Outlook Web App and then click Options.
B. Open Microsoft Outlook and then run Office Diagnostics.
C. Install the Exchange 2010 management tools and then run the Get-MessageTrackingReport cmdlet.
D. Install the Exchange 2010 management tools and then run the Search-MessageTrackingReport cmdlet.

Correct Answer: A

QUESTION 163
You deploy a new Exchange Server 2010 organization. You send a test message to an external recipient and immediately receive the following non-delivery report (NDR):

"Delivery has failed to these recipients or groups: User1@contoso.com (user1@contoso.com). The recipient's email system isn't accepting messages now. Please try resending this message later or contact the recipient directly."

You verify that you can successfully send an email message to User1@contoso.com from an external email system. You need to ensure that you can send emails to external recipients from within the Exchange organization. What should you create?

A. A Send connector.
B. An accepted domain.
C. An MX record.
D. An SMTP site link.

Correct Answer: A
QUESTION 164
You have an Exchange Server 2010 organization. You install a new Client Access server in the organization. You need to verify whether users can access the new Client Access server by using Outlook Web App. What should you do?

A. From the Exchange Best Practices Analyzer, run a baseline scan.
B. From the Exchange Management Shell, run the Test-OwaConnectivity cmdlet.
C. From the Exchange Management Console (EMC), examine the properties of the default Outlook Web App mailbox policy.
D. From the Internet Information Services (IIS) Manager, view the session state settings for the Outlook Web Access virtual directory.

Correct Answer: B

QUESTION 165
You have an Exchange Server 2010 server named Server1. You need to verify whether users can connect to Server1 by using Outlook Anywhere. What should you do?

A. Run the Mail Flow Troubleshooter.
B. Run the Test-OWAConnectivity cmdlet.
C. Run the Exchange Remote Connectivity Analyzer.
D. Review the properties of the WEB Outlook Provider.

Correct Answer: C

QUESTION 166
You have an Exchange Server 2010 organization. You need to view a list of mailboxes on all servers that are larger than 1 GB. What should you do?

A. From the Exchange Management Shell, run the Get-Mailbox cmdlet.
B. From the Exchange Management Shell, run the Get-MailboxStatistics cmdlet.
C. From the Exchange Management Console (EMC), create a recipient filter.
D. From the Exchange Management Console (EMC), view the properties of the mailbox database.

Correct Answer: B

QUESTION 167
You have an Exchange Server 2010 organization. You need to determine why a remote SMTP server rejects email sent from your organization. What should you do?
A. Review the application event logs.
B. Review the message tracking logs.
C. Set the Protocol logging level to Verbose on the Receive connectors and then review the protocol log files.
D. Set the Protocol logging level to Verbose on the Send connectors and then review the protocol log files.

Correct Answer: D

QUESTION 168
Your network contains an Active Directory forest that contains one domain. You plan to delegate the installation of an Exchange Server 2010 server to an external consultant named User1. User1 is a member of the Server Operators group and the Account Operators group only. You need to ensure that User1 can install the Exchange Server 2010 server in the forest. What should you run from the Exchange Server 2010 installation media?

A. Setup /PrepareAD.
B. Setup /PrepareDomain.
C. Setup /PrepareLegacyPermissions.
D. Setup /PrepareSchema.

Correct Answer: A

QUESTION 169
You plan to deploy an Exchange Server 2010 Client Access server on a new server. The server will be a member of a database availability group (DAG). You need to identify the operating system required for the planned deployment. The solution must minimize software costs. Which operating system should you identify?

A. Windows Server 2008 R2 Foundation.

Correct Answer: C

QUESTION 170
You have an Exchange organization that contains the Exchange servers shown in the following table:
You plan to move all mailboxes from Server2 and Server3 to Server4. You need to ensure that all users can send and receive email messages after their mailboxes are moved to Server4. What should you do?

A. Create an SMTP Site link.
B. Create a Routing Group and a Routing Group Connector.
C. Install the Exchange Server 2010 Hub Transport server role on Server4.
D. Install the Exchange Server 2010 Edge Transport server role on a new server.

Correct Answer: C

QUESTION 171
You have an Exchange Server 2010 organization. You need to configure the organization to reject all email messages that have a spam confidence level (SCL) that is greater than 7. What should you configure?

A. Content filtering.
B. Recipient filtering.
C. Sender filtering.
D. Sender reputation.

Correct Answer: A

QUESTION 172
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You need to ensure that an administrator can recover hard-deleted email messages from a user's mailbox indefinitely. What should you do?

A. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
B. From the properties of the mailbox, enable retention hold.
C. From the properties of the mailbox, enable litigation hold.
D. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
E. Create a managed custom folder and manager content settings.
F. From the properties of the mailbox database, modify the Deletion Settings.
G. From the properties of the mailbox, enable single item recovery.
H. Create a retention policy and a retention tag.
I. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
J. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
K. From the Exchange Management Shell run Set-MailboxDatabase -DumpsterStatistics $true cmdlet.
L. From the properties of a Mailbox server, modify the System Settings.
M. From the properties of the mailbox database, modify the maintenance schedule.

Correct Answer: C

QUESTION 173
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack (SP1) installed. You need to ensure that a user can use a .pst file to access all of the email messages in a mailbox stored in a recovery database. What should you do?

A. From the Exchange Management Shell, run the New-MailboxExportRequest cmdlet.
B. Create a retention policy and retention tag.
C. From the properties of the mailbox database, select the This database can be overwritten by a restore check box.
D. From the properties of the mailbox, enable single item recovery.
E. From the properties of the mailbox server, modify the System Settings.
F. From the Exchange Management Shell, run the Export-Mailbox cmdlet.
G. From the properties of the mailbox database, modify the maintenance schedule.
H. From the properties of the mailbox, enable retention hold.
I. From the properties of the mailbox database, modify the Deletion Settings.
J. From the Exchange Management Shell, run Set-MailboxDatabase -DumpsterStatistics $true.
K. Create a manager custom folder and managed content settings.
L. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.
M. From the Exchange Management Shell, run the New-MailboxSearch cmdlet.

Correct Answer: A

QUESTION 174
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack (SP1) installed. You create a retention policy and apply the policy to all of the mailboxes in the organization. You need to ensure that users can use personal tags that are not linked to the retention policy. What should you do?

A. Create a Retention Policy Tag that uses the Personal Folders tag type.
B. Modify the management role groups.
C. Run the get-retentionpolicytag | set-retentionpolicytag -retentionenabled $false command.
D. Run the set-mailbox -identity 'user1' -retentionholdenabled $true command.
E. Modify the User Role Assignment Policy.
F. Run the set-retentionpolicytag -identity 'never delete' -type Personal command.
G. Run the `set-mailbox -identity 'user1' -singleitemrecoveryenabled $true`.
H. Run the `set-retentionpolicytag -identity 'never delete' -type all`.
I. Create a Retention Policy Tag that uses the All other folders tag type.

**Correct Answer: E**

**QUESTION 175**
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. All servers run Windows Server 2008 R2. The organization contains Mailbox servers, Client Access servers, and Hub Transport servers only. You need to identify why a server on the Internet rejects email messages sent from users in the organization. What should you do?

A. Review the connectivity logs.
B. Run the Exchange Server User Monitor (ExMon).
C. Run the `Get-MailboxFolderStatistics` cmdlet.
D. Modify the Log Settings from the properties of the Hub Transport server.
E. Review the Application event log.
F. Run the `Set-AdminAuditLogConfig` cmdlet.
G. Run the `Set-EventLogLevel` cmdlet.
H. Run the `Get-User` cmdlet.
I. Modify the Server Diagnostic Logging Properties.
J. Run the Exchange Best Practices Analyzer.
K. Enable SMTP protocol logging.
L. Run the `Get-MailboxStatistics` cmdlet.

**Correct Answer: K**

**QUESTION 176**
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. All servers run Windows Server 2008 R2. The organization contains Mailbox servers, Client Access servers, and Hub Transport servers only. You need to ensure that you can review any changes made by administrators to the Exchange configuration. The solution must identify which administrator performed each change. What should you do?

A. Review the connectivity logs.
B. Run the Exchange Server User Monitor (ExMon).
C. Run the `Get-MailboxFolderStatistics` cmdlet.
D. Modify the Log Settings from the properties of the Hub Transport server.
E. Review the Application event log.
F. Run the `Set-AdminAuditLogConfig` cmdlet.
G. Run the `Set-EventLogLevel` cmdlet.
H. Run the `Get-User` cmdlet.
I. Modify the Server Diagnostic Logging Properties.
J. Run the Exchange Best Practices Analyzer.
K. Enable SMTP protocol logging.
L. Run the Get-MailboxStatistics cmdlet.

Correct Answer: F

QUESTION 177
You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You need to ensure that an equipment mailbox automatically accepts all meeting requests. What should you do from the properties of the mailbox?

A. Configure the Resource Information settings.
C. Configure the Account settings.
D. Configure the Mailbox Features settings.
E. Configure the Resource Policy settings.
F. Configure the Resource In-Policy settings.
G. Enable the Resource Booking Attendant.
H. Configure the Mail Flow settings.

Correct Answer: G

QUESTION 178
You have an Exchange 2010 organization. You have an administrative user named Admin1. You need to ensure that Admin1 can move mailboxes in the organization. The solution must assign the minimum amount of permissions to Admin1. What should you do?

A. Create a local move request.
B. Create a custom Management role. Assign the role to Admin1.
C. Add Admin1 to the Organization Management role group.
D. Add Admin1 to the Recipient Management security group.

Correct Answer: B

QUESTION 179
You have an Exchange Server 2010 organization. You need to ensure that all users in the organization can automatically schedule the use of a projector. What should you do?

A. Create a new sharing policy.
QUESTION 180
You have an Exchange Server 2010 organization. A user reports that some meetings are missing from her calendar. You need to recover the missing calendar items. The solution must ensure that the missing calendar items are recovered automatically. What should you do?

A. Create and then configure a sharing policy.
B. Set the schedule for the Managed Folder Assistant.
C. Run the Set-MailboxCalendarConfiguration cmdlet.
D. Set the schedule for the Calendar Repair Assistant (CRA).

Correct Answer: D

QUESTION 181
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a forest with a domain named ABC.com. The forest and domain functional levels are set at Windows Server 2003. The environment of ABC.com currently makes use of Microsoft Exchange Server 2003 Service Pack 2 (SP2) as their messaging solution. You receive instruction from ABC.com to migrate the messaging system to Exchange Server 2010. What action must you take to prepare for the first Microsoft Exchange Server 2010 server?

A. You should run the adprep.exe /forestprep command.
B. You should run the adprep.exe /domainprep command.
C. You should run the setup.com /AnswerFile:Exchange-All.xml command.
D. You should run the setup.com /PrepareAD command.

Correct Answer: D

QUESTION 182
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com currently makes use of Exchange 2000 Server and Exchange Server 2003 Service Pack 2 (SP2) in their messaging system. You receive instruction from ABC.com to migrate the messaging system to Exchange Server 2010 with Client Access, Mailbox and Hub Transport servers. What actions must you take?

A. You should remove the Exchange 2000 Server servers from the environment.
B. You should configure EdgeSync synchronization in the environment.
C. You should run the setup /NewProvisionedServer in the environment.
D. You should run the Migration Preparation Tool from the other servers in the environment.

Correct Answer: A

**QUESTION 183**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The ABC.com network has a mail server named ABC-EX01 that has Windows Server 2008 installed. You receive instruction from ABC.com to deploy Exchange Server 2010 on ABC-EX01 to support the following roles:

- Hub Transport role.
- Client Access role.
- Mailbox role.
- Unified Messaging (UM) server role.

What action must you take?

A. You should run setup /NewProvisionedServer on ABC-EX01.
B. You should run ServerManagerCmd.exe -IP Exchange-All.xml on ABC-EX01.
C. You should run adprep.exe /domainprep on ABC-EX01.
D. You should run Setup.com /PrepareAD on ABC-EX01.

Correct Answer: B

**QUESTION 184**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The ABC.com network has a mail server named ABC-EX02 that has Microsoft Server 2008 with Service Pack 2 installed. You receive instruction from ABC.com to deploy Exchange Server 2010 on ABC-EX02 to support the Hub Transport, Client Access, and Mailbox server roles. What action must you take? (Choose all that apply).

A. You should deploy Microsoft .NET Framework 3.5 Service Pack 1.
B. You should deploy the Active Directory Connector (ADC).
C. You should deploy Windows Management Framework.
D. You should delete all Recipient Update Service (RUS) objects.
E. You should run ServerManagerCmd.exe IP Exchange-Typical.xml.
F. You should run ServerManagerCmd.exe -IP Exchange-CADB.xml.

Correct Answer: ACE

**QUESTION 185**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The ABC.com network has a mail server named ABC-EX01. What actions must you take to run an unattended installation of Exchange Server 2010 server on ABC-EX01?

A. You should add recipient filter.
B. You should add create Send connectors.
C. You should run setup /ps.
D. You should add setup.com in the script.

Correct Answer: D

QUESTION 187
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. The ABC.com network contains a server named ABC-EX10. You receive instruction from ABC.com to add the Hub Transport Server role on ABC-EX10. What command can be used for installing the Hub Transport Server role?

A. You should run setup /ps.
B. You should run setup.com /M:Install /R:HT.
C. You should run setup.exe.
D. You should run scanforfeature.

Correct Answer: B

QUESTION 188
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The ABC.com network has three mail servers named ABC-SR11, ABC-SR12 and ABC-SR13 in the following configuration:

Correct Answer: BD
- ABC-SR11 has the Front-end role installed and is running Exchange Server 2003 SP2.
- ABC-SR12 has the Back-end role installed and is running Exchange Server 2003 SP2.
- ABC-SR13 has the Client Access role and the Mailbox role installed and is running Exchange Server 2010.

How can you perform the migration of the mailboxes from ABC-SR12 to ABC-SR13 and ensure the availability of the mailboxes?

A. You should implement recipient filtering.
B. You should configure EdgeSync synchronization.
C. You should implement Transport protection rules.
D. You should deploy the Exchange Server 2010 Hub Transport server role.

Correct Answer: D

QUESTION 189
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com is using Microsoft Exchange Server 2010. The ABC.com network contains a server named ABC-EX10 configured with the following roles:

- Client Access role.
- Hub Transport role.
- Mailbox Server role.

What action must you take to guarantee email availability to ABC.com users who are utilizing regular mail clients like Microsoft Outlook Express or Windows Live Mail?

A. You should use Security/Multipurpose Internet Mail Extensions (S/MIME).
B. You should use the Windows Management Instrumentation Command-line (WMIC).
C. You should use the Automatic setting of the Microsoft Exchange POP3 service.
D. You should use setup /NewProvisionedServer.

Correct Answer: C

QUESTION 190
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. The ABC.com network contains a server named ABC-EX10 that contains a mailbox named KingMail. What action must you take to shift the transaction log files of KingMail?

A. You should use msiexec.exe.
B. You should run ServerManagerCmd.exe -IP Exchange-All.xml.
C. You should use the Move-DatabasePath cmdlet.
D. You should use the Move-SBSDataStore KingMail cmdlet.

Correct Answer: C

QUESTION 191
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. The ABC.com network contains a Mailbox server named ABC-EX10. What action must you take to have mailboxes retained for 8 weeks after deletion?

A. You must create a legal hold.
B. You must change the mailbox database properties.
C. You must create Transport protection rules.
D. You must create Personal archives.

Correct Answer: B

QUESTION 192
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2003 as their messaging solution. You have added a new server to the network and deployed Exchange Server 2010 on it with the default settings. What command must be used to change the default email address policy?

A. You must use setup /NewProvisionedServer.
B. You must use lpsetupui.exe.
C. You must use Set-EmailAddressPolicy.
D. You must use Setup.com /AnswerFile:Exchange-All.xml.

Correct Answer: C

QUESTION 193
You work as the enterprise exchange administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. The ABC.com network has two mailbox servers named ABC-EX01 and ABC-EX02. ABC-EX01 is running Exchange Server 2007 and ABC-EX02 is running Exchange Server 2010. What actions must you take to shift a mailbox on ABC-EX01 to ABC-EX02?

A. You must use msiexec.exe from ABC-EX01.
B. You must use the New-MoveRequest cmdlet from ABC-EX02.
C. You must use wecutil qc from ABC-EX02.
D. You must use wuauclt.exe /detectnow from ABC-EX02.

Correct Answer: B
QUESTION 194
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. What action must you take to stop a user named Mia Hamm from removing information from her mailbox?

A. You must use log transactions.
B. You must use a legal hold.
C. You must use Outlook protection rules.
D. You must use the Set-Mailbox Mia Hamm -LitigationHoldEnabled $true cmdlet.

Correct Answer: D

QUESTION 195
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2007 as their messaging solution. ABC.com has acquired a new mailbox server named ABC-EX03 that is running Exchange Server 2010. How can you shift the mailboxes to ABC-EX03?

A. You must use the New-MoveRequest cmdlet.
B. You must use Exchange Server Jetstress 2010.
C. You must use the Exchange Server Remote Connectivity Analyzer (ExRCA).
D. You must run ServerManagerCmd.exe -IP Exchange-All.xml.

Correct Answer: A

QUESTION 196
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. What actions must you take to use administrative delegation on a series of cmdlets?

A. You must implement log transactions.
B. You must set up new management role.
C. You must implement Mailbox journaling.
D. You must set up a Role Based Access Control (RBAC) role.

Correct Answer: B

QUESTION 197
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. What actions must you take to allow a user named Mia Hamm to access the resource mailbox? (Choose all that apply).

A. You must change the resource mailbox's properties.
B. You must use log transactions.
C. You must use Outlook protection rules.
D. You must use the Set-Mailbox Mia Hamm -LitigationHoldEnabled $true cmdlet.

Correct Answer: A

QUESTION 198
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. ABC.com has a Research department. ABC.com currently only has one electronic microscope that the staff must share. You receive instruction from ABC.com to implement a solution so that all the employees are able to automatically calendar the use of the electronic microscope. How can you achieve the goal?

A. You must use an equipment mailbox.
B. You must use a local use request.
C. You must use a managed folder mailbox policy.
D. You must use Personal Archives.

Correct Answer: A

QUESTION 199
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. ABC.com has a distribution group named KingData. You receive instruction from ABC.com to allow an employee Mia Hamm to review all mail to KingData and approve it. Mia Hamm must not be able to change group membership. How can you ensure that the above goal is achieved?

A. You must modify the properties of KingData.
B. You must enable folder redirection.
C. You must set Mia Hamm as a group moderator for KingData.
D. You must implement recipient filtering.

Correct Answer: C

QUESTION 200
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft

Exchange Server 2010 as their messaging solution. Which of the following options can be used in order to change the permission settings for a public folder?

A. Active Directory Users and Computers.
B. Microsoft Office Outlook.
C. The Mail Flow Troubleshooter.

Correct Answer: B

**QUESTION 201**
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. What action must you take to restrict the amount of data in a particular public folder without impacting on the other public folders?

A. You must use an equipment mailbox.
B. You must use the Mail Flow Troubleshooter.
C. You must use the Public Folder Management Console.

Correct Answer: C

**QUESTION 202**
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. It has come to the attention of the ABC.com management that a network user named Rory Allen is using Exchange ActiveSync to abuse the company's email policy by downloading huge attachments that do not pertain to his work detail. Consequently you receive instruction from ABC.com to restrict the attachments size for Rory Allen to 100 KB. How can you achieve the goal and ensure that only Rory Allen is restricted?

A. You must set up a new ActiveSync Device Access rule.
B. You must set up a managed folder mailbox policy.
C. You must set up a new role assignment policy.
D. You must set up Outlook protection rules.

Correct Answer: A

**QUESTION 203**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com has acquired a new server named ABC-EX01 that is running Microsoft Exchange Server 2010. What action must you take to give employee’s access to ABC-
EX01 from the Internet using Exchange ActiveSync?

A. You must enable recipient filtering.
B. You must use Send connectors.
C. You must change the Microsoft-Server-ActiveSync virtual directory’s external URL.
D. You must use DNS forwarding.

Correct Answer: C

QUESTION 204
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of one forest with one site. The ABC.com network has two Exchange Server 2010 Client Access servers named ABC-EX14 and ABC-EX15 that have IMAP4 installed. Remote users from the Internet currently make use of IMAP4 to connect to both ABC-EX14 and ABC-EX15. What action must you take to block IMAP4 access to the mailboxes on ABC-EX15?

A. You must implement Outlook protection rules.
B. You must implement Transport protection rules.
C. You must set up a Public Folder Management Console.
D. You must deselect the IMAP4 mailbox feature in ABC-EX15.

Correct Answer: D

QUESTION 205
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. You have received instructions from the CEO to enable Autodiscover for Internet users by creating a resource record in DNS. What action must you take?

A. You must set up recipient filtering.
B. You must set up a Host (A) record.
C. You must use a TXT record.
D. You must use a Pointer (PTR) record.
E. You must use a Mail exchange (MX) record.

Correct Answer: B

QUESTION 206
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. What action must you take to allow your environment to utilize the wildcard certificate so that it can be used for Outlook Anywhere?
A. You must change recipient filtering.
B. You must change the DNS forwarding.
C. You must change the Outlook protection rules.
D. You must change the EXPR Outlook Provider’s properties.

Correct Answer: D

QUESTION 207
You have an Exchange Server 2010 organization that contains three Mailbox servers. All Mailbox servers are members of a database availability group (DAG) and have a public folder database. The Active Directory forest contains one site. You create a new site and install new Exchange Server 2010 servers in the site. You need to ensure that public folders are stored on servers in both sites. What should you do?

A. Create a public folder database on a server in the new site.
   Modify the replication settings for all public folders.
B. Create a public folder database on a server in the new site.
   Run the Set-DatabaseAvailabilityGroup cmdlet from a server in the new site.
C. Configure clustered continuous replication (CCR) on two servers in the new site.
   Modify the replication settings for all public folder databases.
D. Configure standby continuous replication (SCR) on a server in the new site.
   Run the Enable-StorageGroupCopy cmdlet from a server in the new site.

Correct Answer: A

QUESTION 208
You have an Exchange Server 2010 Mailbox server. The server is a member of a database availability group (DAG). The server fails. You install the operating system on a new server and use the same computer name. You join the server to the domain. You need to reinstall Exchange Server 2010 on the server. The solution must ensure that previous Exchange server configurations are applied to the new server. What should you do?

A. Run setup /RecoverCMS.
B. Run setup /RecoverServer.
C. Restore the system state from the previous server.
D. Install the Exchange management tools and then run the Restore-Computer cmdlet.

Correct Answer: B

QUESTION 209
Your network contains an Exchange Server 2010 Edge Transport server named Server1. You install...
a new Exchange Server 2010 Edge Transport server named Server2. You need to copy the Edge Transport configurations from Server1 to Server2. What should you do on Server1?

A. Run the ExportEdgeConfig.PS1 script.
B. Run the New-EdgeSyncServiceConfig cmdlet.
C. Back up the system state.
D. Back up the Active Directory Lightweight Directory Services (AD LDS) database.

Correct Answer: A

QUESTION 210
Your company acquires a new Internet domain name. You need to ensure that all users can receive email messages sent to the new domain name. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two).

A. Create a sharing policy.
B. Create a remote domain.
C. Create an accepted domain.
D. Create an email address policy.
E. Modify the properties of the default Receive connector.

Correct Answer: CD

QUESTION 211
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. Employees at ABC.com use Outlook Web App to access their mailboxes. You receive a complaint from an ABC.com employee named Mia Hamm that her mailbox is unavailable. What actions must you take to resolve this problem?

A. You must change the WEB Outlook Provider.
B. You must change Mia Hamm’s mailbox features.
C. You must change the EXPR Outlook Provider.
D. You must change the DNS forwarding.

Correct Answer: B

QUESTION 212
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. You have to have the Application Identifier of ABC.com stored in a DNS record. The Application Identifier is used for the federated trust. What actions must you take on the DNS?
A. You must set up recipient filtering.
B. You must set up a Host (A) record.
C. You must use a TXT record.
D. You must use a Pointer (PTR) record.
E. You must use a Mail exchange (MX) record.

Correct Answer: C

QUESTION 213
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. How can you configure Outlook Web App (OWA) to block ABC.com employees changing passwords?

A. You must use IP Block list.
B. You must change the properties of the OWA virtual directory.
C. You must use an Outlook Web App mailbox policy.
D. You must set up recipient filtering.

Correct Answer: B

QUESTION 214
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. What actions must you take to allow employees to change their passwords using Microsoft Windows but not Outlook Web App?

A. You must up an IP Block list.
B. You must use an Outlook Web App Mailbox policy.
C. You must set up the Segmentation tab settings.
D. You must set up recipient filtering.

Correct Answer: C

QUESTION 215
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. A new ABC.com usage policy prohibits the employees from using certain words in internal email messages. What actions must you take to have the policy implemented?

A. You must set up an IP Block list.
B. You must set up sender filtering.
C. You must set up managed folders.
D. You must build a transport rule.

Correct Answer: D

QUESTION 216
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. The ABC.com network has a DNS server named ABC-SR04. What action must you take to prevent the Hub Transport servers using ABC-SR04 to resolve names on the Internet?

A. You must change the DNS forwarding.
B. You must change the Hub Transport server object properties.
C. You must amend the Transport protection rules.
D. You must set the Net.TCP Port Sharing service to Automatic.

Correct Answer: B

QUESTION 217
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com. ABC.com has an Exchange Server 2010 server named ABC-EX01 that has the Hub Transport server role installed. What actions must you take to allow ABC-EX01 to receive email from the Internet?

A. You must change the properties of the MSExchangePOP3 (TCP-in) Windows Firewall rule.
B. You must create and export a filter from the Exchange Management Console.
C. You must select the Anonymous user’s permission group for the Default ABC-EX01 Receive connector.
D. You must configure Outlook Anywhere.

Correct Answer: C

QUESTION 218
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. What actions must you take to change the Exchange-specific cost for a site link?
A. You must configure the Host (A) resource records.
B. You must add and configure an IPSec Enforcement Network policy.
C. You must create an Outlook Web App Mailbox policy.
D. You must use the Set-ADSiteLink cmdlet.

Correct Answer: D

QUESTION 219
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. The ABC.com network contains an Exchange Server 2010 Mailbox server named ABC-EX02. What actions must you take to check when employees last logged on to ABC-EX02?

A. You must configure real time block lists (RBLs).
B. You must use the Exchange Server User Monitor (ExMon).
C. You must use the Get-MailboxStatistics.
D. You must use the administrator audit logging.

Correct Answer: C

QUESTION 220
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network consists of a domain named ABC.com and contains an Exchange Server 2010 Mailbox server named ABC-EX01. How can you list the mailbox sizes of all employees?

A. You must use the Get-MailboxDatabase cmdlet.
B. You must use the Get-MailboxStatistics cmdlet.
C. You must use Exchange Server User Monitor (ExMon).
D. You must use ServerManagerCmd.exe -IP Exchange-CADB.xml.

Correct Answer: B

QUESTION 221
You work as the Enterprise Exchange Administrator at ABC.com. ABC.com is using Microsoft Exchange Server 2010 as their messaging solution. The ABC.com network has two Mailbox servers named ABC-EX01 and ABC-EX02. During the course of the week you receive instructions from the CEO to determine the amount of time it takes for the delivery of messages between ABC-EX01 and ABC-EX02. Which of the following commands can be used to achieve this goal?
QUESTION 222
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. You are responsible for managing a Mailbox server named ABC-EX02. The employees at ABC.com use Microsoft Office Outlook 2010 to access the Exchange environment. What actions must you take to determine the amount of lag for connections to ABC-EX02?

A. You must use the Test-Mailflow cmdlet.
B. You must use MSExchangeTransport diagnostic logging.
C. You must use the Test-ServiceHealth cmdlet.
D. You must use the Test-OutlookConnectivity cmdlet.

Correct Answer: D

QUESTION 223
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. You are responsible for managing an Exchange Server 2010 server named ABC-EX02. What command can be used to determine if the employees can use Outlook Anywhere to access ABC-EX02?

A. You must use the Test-ImapConnectivity cmdlet.
B. You must use the Test-OutlookConnectivity cmdlet.
C. You must use the Get-MessageTrackingReport cmdlet.
D. You must use the Exchange Remote Connectivity Analyzer.

Correct Answer: D

QUESTION 224
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. You are responsible for managing an Exchange Server 2010 server named ABC-EX02 that has IMAP4 installed. What action must you take to determine if users are able to email hosts on the Internet?

A. You must use the Test-Mailflow cmdlet.
B. You must use the Test-OutlookConnectivity cmdlet.
C. You must use the Get-MessageTrackingReport cmdlet.
D. You must use the Exchange Remote Connectivity Analyzer.

Correct Answer: D
A. You must connect to port 587, from a workstation.
B. You must use the Get-MessageTrackingReport cmdlet.
C. You must enable the Receive connectors and Send connectors.
D. You must use the Remote Connectivity Analyzer.

Correct Answer: A

**QUESTION 225**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. How can you find all mailboxes that exceed 2 GB in size?

A. You can use the Get-MailboxStatistics cmdlet.
B. You can use the Test-Mailflow cmdlet.
C. You can use the Get-StoreUsageStatistics cmdlet.
D. You can use the Test-ServiceHealth cmdlet.

Correct Answer: A

**QUESTION 226**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. A SMTP server on the Internet has rejected some emails sent from ABC.com. What actions must you take to determine why this happened? (Choose all that apply).

A. You must use the Windows Remote Management (WinRM) over SSL.
B. You must access the Send connectors and use the Verbose setting in Protocol logging.
C. You must configure EdgeSync synchronization.
D. You must check the protocol log files.
E. You must implement a new managed content setting.

Correct Answer: BD

**QUESTION 227**
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. You are responsible for managing an Exchange Server 2010 server named ABC-EX01. ABC- EX01 supports message tracking. What actions must you take to change the location of the log file used with the message tracking?
A. You must change the Hub Transport server object properties.
B. You must set up recipient filtering.
C. You must configure EdgeSync synchronization.
D. You must change the Outlook protection rules.

Correct Answer: A

QUESTION 228
You work as the Enterprise Exchange Administrator at ABC.com. The ABC.com network is running in a Microsoft Exchange Server 2010 environment. The ABC.com network has two Mailbox servers named ABC-EX01 and ABC-EX02. You are busy implementing a database availability group (DAG). What actions must you take to guarantee mailbox database replications on ABC-EX01 and ABC-EX02?

A. You must implement a custom Send connector.
B. You must install the Active Directory Connector (ADC).
C. You must change the Database paths.
D. You must change the membership list of the DAG.

Correct Answer: D

QUESTION 229
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. The CEO has requested you to ensure that all emails with JPEG attachments be filtered so that they are not allowed into the users' mailboxes. You decide to use the Exchange Management Shell. Which of the following commands will you use to accomplish the task?

A. Add-AttachmentFilterEntry -Name *.jpeg -Type ContentType.
B. Add-AttachmentFilterEntry -Name *.exe -Type FileName.
C. Add-AttachmentFilterEntry -Name image/jpeg -Type ContentType.
D. Add-AttachmentFilterEntry -Name image/jpeg -Type FileName.

Correct Answer: C

QUESTION 230
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. You have deployed Hub Transport, Client Access, Unified Messaging, and Mailbox servers in the messaging organization. You have not deployed any Edge Transport servers in the organization. Which of the
following servers can be used to send and receive email traffic across the Internet?

A. The server configured with the Unified Messaging server role.
B. The server configured with the Client Access server role.
C. The server configured with the Mailbox server role.
D. The server configured with the Hub Transport server role.

Correct Answer: D

QUESTION 231
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. You need to create a mailbox for a user named Sam in the Exchange organization. The user account of Sam is already created in the ABC.com domain. Which of the following actions will you perform to accomplish this task?

A. Use the Enable-Mailbox cmdlet to create a mailbox for Sam.
B. Use the Restore-Mailbox cmdlet to create a mailbox for Sam.
C. Use the Set-Mailbox cmdlet to create a mailbox for Sam.
D. Use the New-Mailbox cmdlet to create a mailbox for Sam.

Correct Answer: A

QUESTION 232
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2003 organization. The management instructs you to deploy Exchange Server 2010 in your network. You decide to prepare the schema and domain first. Which of the following commands should you run prior to performing the normal schema and domain preparation?

A. Setup /PrepareSchema.
B. Setup /PrepareLegacyExchangePermissions.
C. Setup /PrepareAD.
D. Setup /PrepareLegacyExchangePermissions:child.ABC.com.

Correct Answer: B

QUESTION 233
You recently took over as the Exchange 2010 Server Administrator for ABC.com. The previous administrator allowed users to pick the email addresses of their choice. This caused much confusion, as each user wanted a different email address. You want to standardize the email addresses across the entire organization. You have determined that the naming convention will be
the first letter in their first name, followed by their last name. For example, the email address for John Smith would be jsmith@ABC.com. What should you do to enforce this standard?

A. Make sure all administrators manually change the email addresses to comply with standards.
B. Instruct Active Directory administrators to change all email addresses to comply with this standard.
C. Create an email address policy.
D. Create a transport rule.

Correct Answer: C

QUESTION 234
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. You need to enable automatic booking for a room mailbox called TrainingRoom. Which of the following commands will you enter in the Exchange Management Shell to accomplish this task?

A. New-CalendarProcessing TrainingRoom -AutomateProcessing:AutoAccept.
B. Set-CalendarProcessing TrainingRoom -AutomateProcessing:AutoAccept.
C. Set-MailboxCalendarSettings TrainingRoom -AutomateProcessing:None.
D. New-Mailbox -UserPrincipalName TrainingRoom@ABC.com -database "Mailbox Database" Name "Training Room" -OrganizationalUnit Users -DisplayName "Training Room" -ResetPasswordOnNextLogon $false -Room -AutomateProcessing:AutoAccept.

Correct Answer: B

QUESTION 235
You work as an Exchange Administrator for ABC.com. The company has a Windows 2008 Active Directory-based network. You have just finished deploying an Exchange 2010 server and migrating all mailboxes including resource mailboxes from Exchange Server 2003. After the migration from the Exchange 2003 server was complete, you noticed that the resource mailboxes were showing up as shared mailboxes and not resource mailboxes. You realize that you need to convert the shared mailboxes to Exchange 2010 resource mailboxes. While logged into the Exchange Management Console, you do not see any option to convert a mailbox. What should you use to convert the Exchange 2010 shared mailboxes to Exchange 2010 resource mailboxes?

A. Exchange Troubleshooting Assistant.
B. Exchange System Manager.
C. Exchange Management Shell.
D. Command prompt.

Correct Answer: C
QUESTION 236
You have a server that runs Windows Server 2008 SP2. You plan to install Exchange Server 2010 SP1 on the server. You need to install the Exchange Server 2010 SP1 pre-requisites for the Mailbox, Client Access, and Hub Transport server roles. What should you do on the server?

A. Install Windows Management Framework.
   - Install the Web Server role.
   - Install the RPC over HTTP Proxy component.

B. Install Windows Management Framework.
   - Install Message Queuing.
   - Install the Web Server role.

C. Install Microsoft .NET Framework 3.5 SP1.
   - Install Windows Remote Management (WinRM) 2.0.
   - Run ServerManagerCmd.exe -IP Exchange-Base.xml.

D. Install Microsoft .NET Framework 3.5 SP1.
   - Install Windows Management Framework.
   - Run ServerManagerCmd.exe -IP Exchange-Typical.xml.

Correct Answer: D

QUESTION 237
You have an Exchange Server 2010 organization. The organization contains a distribution group named Group1. You need to ensure that a user named User1 can review and approve all messages sent to Group1. You must prevent User1 from modifying the membership of Group1. What should you do?

A. Add User1 to Group1’s Managed by list.
B. Assign User1 as a group moderator for Group1.
C. Assign the Message Tracking management role to User1.
D. Add User1 to Group1 and then create a new journal rule.

Correct Answer: B

QUESTION 238
You have an Exchange Server 2010 organization. You have a group named Group1 that contains 10,000 members. You need to ensure that an informative message is displayed when users add Group1 to the recipient list of an email message. What should you do?

A. Configure a MailTip.
B. Create a transport rule.
C. Create a Send connector.
D. Configure an expansion server.

Correct Answer: A

QUESTION 239
You have an Exchange Server 2010 organization named contoso.com. All users from your company have the @contoso.com email address suffix. You need to configure a public folder named Folder1 so that Internet users can post content by sending an email to folder1@contoso.com. What should you do?

A. Mail enable Folder1.
B. Assign the author role to Anonymous.
C. Create a new mail contact that has the email address folder1@contoso.com, and then create a transport rule.
D. Create a new mailbox that has the email address folder1@contoso.com, and then create a transport rule.

Correct Answer: A

QUESTION 240
Your network contains an Exchange Server 2010 server. You need to prevent a user named User1 from downloading attachments larger than 50 KB when using Exchange ActiveSync. Your solution must not affect other users. What should you do first?

A. Create a new ActiveSync Device Access rule.
B. Create a new Exchange ActiveSync Mailbox policy.
C. Modify the properties of User1's mailbox.
D. Modify the properties of the default Exchange ActiveSync Mailbox policy.

Correct Answer: B

QUESTION 241
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The management instructs you to prepare an Exchange organization. You decide to prepare the Active Directory schema and domains by using a computer running Windows Server 2008. Which of the following actions will you perform prior to preparing the schema or domains?
A. Run the Setup /PrepareLegacyExchangePermissions command on the Windows Server 2008 computer.
B. Install the Active Directory management tools on the Windows Server 2008 computer.
C. Install Windows Remote Management (WinRM) 2.0 on the Windows Server 2008 computer.

Correct Answer: B

QUESTION 242
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. The Exchange environment has two Edge Transport servers and two Hub servers. The CEO wants you to filter a list of IP addresses and requests that you add these IP addresses to the block list. You log into one of the Edge Transport servers and add the list of IPs to the block list. The next day the CEO informs you that the IP addresses he gave you are still able to send messages into the Exchange environment. What changes should you make to ensure these IP addresses are blocked?

A. Restart the SMTP service.
B. Reboot the Edge Transport server.
C. Add the list to the second Edge Transport server.
D. Restart IIS.

Correct Answer: C

QUESTION 243
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. You have recently transitioned the messaging organization to Exchange 2010 from Exchange Server 2007 SP2. You need to move the mailboxes from the old messaging organization to the new messaging organization. What cautions and prerequisites will you take when moving mailboxes? (Each correct answer represents a complete solution. Choose all that apply).

A. The Movemailbox cmdlets in Exchange 2007 cannot be used to move mailboxes from Exchange 2007 to Exchange 2010.
B. The mailboxes from Exchange 2007 SP1 or earlier cannot be moved. The source mailbox server must be Exchange 2007 SP2 or later.
C. The antivirus and anti-spam updates have to be disabled prior to moving the mailboxes.
D. The Exchange System Manager or Active Directory Users and Computer consoles cannot be used to move mailboxes from Exchange 2003 to Exchange 2010.

Correct Answer: ABD
QUESTION 244
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. There are 150 mailboxes in the messaging organization, which are stored in a mailbox database named MailboxDatabase. You have set the storage quota limit to 200 MB for all mailboxes in the database MailboxDatabase. When the limit of a mailbox reaches 180 MB, the corresponding user gets a warning message. After reaching the limit, the users are not able to send and receive any email. The manager of your company, John Smith, asks you to change the storage limit for his mailbox to 280 MB. Which of the following commands will you enter in the Exchange Management Shell to accomplish the task?

A. Set-Mailbox -Identity john.smith@ABC.com -IssueWarningQuota 188743680 -ProhibitSendReceiveQuota 293601280 -UseDatabaseQuotaDefaults $true.
B. Set-Mailbox -Identity john.smith@ABC.com -IssueWarningQuota 188743680 -ProhibitSendReceiveQuota 293601280 -UseDatabaseQuotaDefaults $false.
C. Set-Mailbox -Identity john.smith@ABC.com -IssueWarningQuota 188743680 -ProhibitSendReceiveQuota 293601280.
D. Set-Mailbox -Identity john.smith@ABC.com -IssueWarningQuota 188743680 -ProhibitSendQuota 293601280 -UseDatabaseQuotaDefaults $false.

Correct Answer: B

QUESTION 245
BlingbyAlex.com was known several years ago by the name AlexBling.com. At times, the sales staff still receives orders from clients at the AlexBling.com address. Both names are owned by the company. After you successfully deploy an Exchange 2010 server configuration, which includes two Hub Transport servers, the sales staff informs you that they are no longer able to receive mail at the AlexBling.com address. What should you do so that they can receive email from both domains?

A. On the Hub Transport server, use the New Accepted Domain Wizard to add AlexBling.com.
B. On the Mailbox server, use the New Accepted Domain Wizard to add AlexBling.com.
C. Use Active Directory to add an email alias to each user’s account for AlexBling.com.
D. On the Client Access server, use the New Accepted Domain Wizard to add AlexBling.com.

Correct Answer: A

QUESTION 246
You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. The management instruct you to ensure that a universal distribution group named “Account Dept” does not receive any email. The management also instruct you that in future, the group might be needed again. Which of the following actions will you perform to accomplish the task?
A. Configure recipient filtering for the members of the group.
B. Remove all members from the group.
C. Remove the group.
D. Disable the group.

Correct Answer: D

QUESTION 247
You work as an Exchange Administrator for ABC.com. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. An employee named John has recently left the company. You need to delete the mailbox and the user account for John. You also need to remove the mailbox from the Exchange database. Which of the following commands will you enter in the Exchange Management Shell to accomplish the task?

A. Deletemailbox -Identity john@ABC.com.
B. Removemailbox -Identity john@ABC.com -Permanent $true.
C. Removemailbox -Identity john@ABC.com.
D. Disablemailbox john@ABC.com.

Correct Answer: B

QUESTION 248
You work as an Exchange Administrator for ABC.com. The company has a Windows 2008 Active Directory-based network. The network contains an Exchange Server 2010 organization. The name of your company is recently changed to ABC Inc. The customers complain that whenever they send emails to ABCInc.com, they are bounced back. However, when they send an email to ABC.com, it is delivered. Which of the following actions will you perform to resolve the issue?

A. Add ABCInc.com as an internal relay domain in accepted domain.
B. Add ABC.com as an internal relay domain in accepted domain.
C. Add ABCInc.com as an authoritative domain in accepted domain.
D. Add ABC.com as an authoritative domain in accepted domain.

Correct Answer: C

QUESTION 249
You are the Exchange Administrator for the ABC Corporation's Exchange 2010 organization. People from outside your organization make inquiries to ABC's Tax department. You create a Tax distribution group that contains all members of the Tax department so people can send questions to the members of the department. You have a number of additional requirements:
A. Check Messages sent to this group have to be approved by a moderator on the properties page of the Tax distribution group.
B. Add George’s account as group moderator of the Tax distribution group.
C. Remove George’s account from the Tax distribution group, add him to another distribution group, and add that group as a member of the Tax distribution group.
D. Add George’s account as a sender that does not require message approval.
E. Check Notify senders in your organization only when their messages aren’t approved.

Correct Answer: ABD

QUESTION 250
You are the Exchange Administrator of the ABC Corporation’s Exchange 2010 organization. You are concerned about the total size of items that are stored in a public folder named ExpenseReport. Which of the following techniques should you use to determine the size of items and the attachments in the public folder?

A. Run the following script: Get-PublicFolderItemStatistics -Identity "\ExpenseReport\2009".
B. Click on the Statistics tab in the properties of the public folder with the Public Folder Management Console.
C. Use the MSExchangeIS Public object in System Monitor.
D. Use the MSExchangeIS object in System Monitor.

Correct Answer: A
QUESTION 251
You are the Exchange Administrator of the ABC Corporation's Exchange organization. All clients on the network use computers with Windows Vista and Outlook 2003 installed or Windows 7 and Outlook 2007 to access their mailbox. Your company acquires the Verigon Corporation, which has its own Active Directory domain named verigon.com. You want to allow out-of-office messages from your organization to be delivered to the verigon.com domain. You also want to block read receipts that are sent from your organization to the verigon.com domain. You configure the verigon.com domain as a remote domain. What should you do next?

A. Run the Set-RemoteDomain cmdlet with the AllowedOOFType parameter set to ExternalLegacy and the DeliveryReportEnabled parameter set to $False.
B. Run the Set-RemoteDomain cmdlet with the AllowedOOFType parameter set to External and the DeliveryReportEnabled parameter set to $False.
C. Run the Set-RemoteDomain cmdlet with the AllowedOOFType parameter set to ExternalLegacy and the NDREnabled parameter set to $False.
D. Run the Set-RemoteDomain cmdlet with the AllowedOOFType parameter set to External and the NDREnabled parameter set to $False.

Correct Answer: A

QUESTION 252
You are the Exchange Administrator of the ABC Corporation's Exchange 2010 organization. You need to retrieve all messages from Ann's mailbox that have the word "classified" in the message body and the subject of "New Project". The message may be in either the Calendar or Inbox folders. What should you do? (Choose two. Each correct answer is part of the solution).

A. Use the Exchange Management Console to create a recovery storage group.
B. Use the Exchange Management Shell to create a recovery storage group.
C. Use the Exchange Management Console to create a recovery database.
D. Use the Exchange Management Shell to create a recovery database.
E. Use the Restoremailbox cmdlet to restore only messages that the word "classified" in the message body and the subject of "New Project".
F. Use the Export-Message cmdlet to restore only messages that the word "classified" in the message body and the subject of "New Project".

Correct Answer: DE

QUESTION 253
You are the Exchange Administrator for your organization. You need to move a user's mailbox from the mailbox server role of an Exchange 2007 SP2 server to the mailbox server role of an Exchange 2010 server in the same forest. You must ensure that the end-user can still access their email account. What action should you take?
A. Run the Movemailbox cmdlet.
B. Run the New-MoveRequest cmdlet.
C. Use the Exchange Management console to issue a New Remote Move Request.
D. Run the Set-MailboxDatabaseCopy cmdlet.

Correct Answer: B

QUESTION 254
You work for the ABC Corporation. You are planning to install Exchange 2010 in all domains of the ABC.com forest. The forest structure is shown in the diagram below:

What command should you run to prepare the domains in the ABC.com forest for Exchange 2010?

A. Setup /PrepareAD /on:ABC.com.
B. Setup /PrepareDomain:ABC.com.
C. Setup /pad.
D. Setup /ps.

Correct Answer: C

QUESTION 255
You are the Exchange Administrator for ABC Corporation's Exchange 2010 organization. Jennifer Brown is a user in the Accounting department who will be on leave for 30 to 40 days. You would like to forward all mail for Jennifer Brown's mailbox to Ann Garcia during her absence. When Jennifer returns from leave, she should be able to see all the messages that were forwarded to Ann Garcia. What should you configure?

A. Set-Mailbox -Identity "Jennifer Brown" -ForwardingAddress "ann@ABC.com"
   - DeliverToMailboxAndForward $false.
B. Set-Mailbox -Identity "Jennifer Brown" -ForwardingAddress "ann@ABC.com"
   - DeliverToMailboxAndForward $true.
C. Add-ADPermission -Identity 'CN=Jennifer Brown,OU=Accounting,DC=ABC,DC=com'
   - User 'ABC\Ann' -ExtendedRights 'Send-as'.

Download the complete collection of Exam's Real Q&As  www.ensurepass.com
D. Add-MailboxPermission -Identity 'CN=Jennifer Brown,OU=Accounting,DC=ABC,DC=com' -User 'ABC\Ann' AccessRights 'FullAccess'.

Correct Answer: B

**QUESTION 256**

You are the Exchange Administrator for ABC Corporation's Exchange 2010 organization. ABC has recently merged with another corporation. The Exchange organization must comply with new legal and regulatory requirements. You must ensure that all email messages that contain at least one recipient or sender who is a member of the tax@ABC.com distribution list, and which pass through the Hub Transport server in the ABC Corporation, will store a copy of the message in an auditor's mailbox. Which cmdlet should you use?

A. Set-JournalRule -Name "Tax Communications" JournalEmailAddress'Auditor@ABC.com' -Scope Internal -Recipient tax@ABC.com -Enabled $True.
B. Set-JournalRule -Name "Tax Communications" JournalEmailAddress'Auditor@ABC.com' -Scope Global -Recipient tax@ABC.com -Enabled $True.
C. Set-JournalRule -Name "Tax Communications" JournalEmailAddress'Auditor@ABC.com' -Scope External -Recipient tax@ABC.com -Enabled $True.
D. New-JournalRule -Name "Tax Communications" JournalEmailAddress'Auditor@ABC.com' -Scope Global -Recipient tax@ABC.com -Enabled $True.

Correct Answer: D

**QUESTION 257**

You are the Exchange Administrator of ABC Corporation's Exchange 2010 organization. You create a public folder named PublicFolder1 on a Mailbox server named MBX55 and enable users to post messages. You want your assistant, Josh, to configure PublicFolder1 to replicate with the Mailbox servers in other offices. To achieve this, you want Josh to run the Set-PublicFolder cmdlet to configure the replication schedule. You must delegate appropriate permissions to Josh to enable him to run the Set-PublicFolder cmdlet. What should you do?

A. Add Josh to the local Server Operators group.
B. Delegate the Exchange Recipient Administrators role to Josh.
C. Delegate the Exchange Public Folder Administrators role to Josh.
D. Delegate the Exchange View-Only Administrators role to Josh.

Correct Answer: C

**QUESTION 258**

You are the Exchange Administrator for ABC Corporation's Exchange 2010 organization. You want
to test connectivity for Outlook Anywhere through the Autodiscover service. What should you use to test it?

A. Mail Flow Troubleshooter.
B. The Test-OutlookConnectivity cmdlet.
C. Message Tracking.
D. Performance Troubleshooter.

Correct Answer: B

QUESTION 259
You are the Exchange Administrator of ABC Corporation's Exchange organization. You have a Mailbox server in a cluster continuous replication (CCR) environment. When a lossy failover occurs, the system automatically re-delivers the recent email messages sent to users on the failed clustered mailbox server. You want to ensure that if another lossy failover occurs, then all mail will be re-delivered, even if there were a large amount of messages sent before the lossy failover occurred. You also want to increase the time a message will be retained by a Hub Transport Server to ensure that messages are not lost in transit. What should you configure?

A. Use the New-JournalRule cmdlet with the WhatIf switch.
B. Use the Set-TransportConfig cmdlet with the MaxDumpsterTime parameter.
C. Use the Set-TransportRule cmdlet with the FromScope switch.
D. Use the Set-MailboxDatabase cmdlet with the MailboxRetention switch.

Correct Answer: B

QUESTION 260
You are the Exchange Administrator for ABC Corporation's Exchange 2010 organization. All servers in the forest must have anti-virus software that contains a file level virus scanner. After you implement the anti-virus software, several users report that they cannot access their mailbox. What should you do? (Choose two. Each correct answer is part of the solution).

A. Restart the Microsoft Exchange Mail Submission service.
B. Run the ESEUTIL utility on the Exchange databases.
C. Exclude *.edb and *.log files from the virus scanner.
D. Restart the Microsoft Exchange Transport service.
E. Restart the Microsoft Exchange Information Store service.

Correct Answer: BC

QUESTION 261
You are the Exchange Administrator of ABC Corporation’s Exchange 2010 organization. You have configured a Database Availability Group (DAG) named DAG01. You need to change the replication port used by the DAG. What are two things that you must do? (Choose two).

A. Use the Exchange Management Console (EMC) to change the TCP port used for replication.
B. Use the Exchange Management Shell to change the TCP port used for replication.
C. Modify the Windows Firewall exceptions on each member of the DAG to open the replication port.
D. Modify the Windows Firewall exceptions on the witness server of the DAG to open the replication port.
E. Use the Exchange Management Shell to configure the DAG IP address of 0.0.0.0.
F. Use the Exchange Management Shell to change the DAG IP address to 127.0.0.1.

Correct Answer: BC

QUESTION 262
You are the administrator of ABC Corporation's Exchange 2010 organization. You notice that all messages sent to recipients in the verigon.com domain, the east.verigon.com domain, and other sub-domains of verigon.com were not delivered. You investigate the problem and you notice that the messages were not delivered because the routing path for delivery was temporarily modified. You have repaired the routing path. You want to resubmit all messages stored on the server named Exchange55 that were not sent to verigon.com and related domains. Which of the following commands should you use?

A. Resume-Message -Filter {FromAddress -eq "*verigon.com"}.
B. Retry-Queue -Identity "Exchange55\verigon.com" -Resubmit $true.
C. Retry-Queue -Identity "Exchange55\Poison" -Resubmit $true.
D. Retry-Queue -Identity "Exchange55\Unreachable" -Resubmit $true.

Correct Answer: D

QUESTION 263
You are the Exchange Administrator of ABC Corporation's Exchange 2010 organization. You are concerned that users’ mailboxes are reaching capacity. You want a report in a table format of all users who have a mailbox on DB01 and their send quotas. Which of the following should you do?
A. Use the MSExchangeIS Mailbox object in System Monitor, and specify DB01 as the instance.
B. Use the MSExchange Database object in System Monitor.
C. Run the following script: `Get-MailboxStatistics -Database DB01 | ft DisplayName, SendQuota`.
D. Run the following script: `Get-Mailbox -Database DB01 | Format-Table Name, ProhibitSendQuota, Database`.

**Correct Answer: D**

**QUESTION 264**

You have a server that runs Windows Server 2008 SP2. You plan to install Exchange Server 2010 SP1 on the server. You need to install the Exchange Server 2010 SP1 pre-requisites for the Mailbox, Client Access, and Hub Transport server roles. What should you do from the server?

A. Install Windows Management Framework
   - Install the Web Server role
   - Install the RPC over HTTP Proxy component

B. Install Windows Management Framework
   - Install Message Queuing
   - Install the Web Server role

C. Install Microsoft .NET Framework 3.5 SP1
   - Install Windows Remote Management (WinRM) 2.0
   - Run `ServerManagerCmd.exe -IP Exchange-Base.xml`

D. Install Microsoft .NET Framework 3.5 SP1
   - Install Windows Management Framework
   - Run `ServerManagerCmd.exe -IP Exchange-Typical.xml`

**Correct Answer: D**
QUESTION 265
Your network contains an internal network and a perimeter network. You have an Exchange Server 2003 organization on the internal network. You install Windows Server 2008 on a new server in the perimeter network. You need to ensure that you can install the Edge Transport server role on the new server. What should you do?

A. Install Active Directory Application Mode (ADAM) on the new server.
B. Install Active Directory Lightweight Directory Services (AD LDS) on the new server.
C. Open TCP port 25 and TCP port 636 on the firewall between the perimeter network and the internal network.
D. Open TCP port 587 and TCP port 3268 on the firewall between the perimeter network and the internal network.

Correct Answer: B

QUESTION 266
You have an Active Directory forest that contains one domain named contoso.com. The functional level of both the forest and the domain is Windows Server 2003. You have an Exchange Server 2003 organization. All servers have Exchange Server 2003 Service Pack 2 (SP2) installed. You plan to transition to Exchange Server 2010. You need to prepare the Active Directory environment for the deployment of the first Exchange Server 2010 server. What should you run?

A. Setup.com /PrepareAD.
B. Setup.com /PrepareDomain.
C. Setup.com /PrepareLegacyExchangePermissions.
D. Setup.com /PrepareSchema.

Correct Answer: A

QUESTION 267
You install a new Exchange Server 2010 server. You need to ensure that users can connect from the Internet to the server by using Exchange ActiveSync. What should you do on the Exchange server?

A. Modify the internal URL for the Microsoft-Server-ActiveSync virtual directory.
B. Modify the external URL for the Microsoft-Server-ActiveSync virtual directory.
C. Enable Anonymous Authentication for the Microsoft-Server-ActiveSync virtual directory.
D. Enable Windows Integrated Authentication for the Microsoft-Server-ActiveSync virtual directory.

Correct Answer: B

QUESTION 268
You have an Active Directory domain named contoso.com. You have an Exchange Server 2010 organization that contains a Client Access server named CAS1. Users connect to CAS1 from the Internet using mail.contoso.com. The organization contains the following mobile clients:

• Windows Mobile 5.0
• Windows Mobile 6.1
• Windows Mobile 6.5

You plan to install a certificate on CAS1. You need to ensure that all clients can connect to CAS1 from the Internet using Exchange ActiveSync. Which name should you include in the certificate?

A. *.contoso.com
B. CAS1.contoso.com
C. EAS.contoso.com
D. mail.contoso.com

Correct Answer: D

QUESTION 269
You have an Active Directory forest that contains a single Active Directory site. Your organization contains the Exchange Server 2010 servers shown in the following table:

• Server1 has the Hub Transport and Client Access server roles installed.
• Server2 has the Mailbox, Hub Transport and Client Access server roles installed.

All clients connect to Server1 and Server2 from the Internet using IMAP4. You need to prevent some users from using IMAP4 to connect to their mailboxes on Server2. What should you do?

A. Modify the IMAP4 retrieval settings on Server2.
B. Disable the IMAP4 mailbox feature for the mailboxes on Server2.
C. On Server1, configure Windows Firewall to block TCP port 25 and TCP port 110.
D. On Server2, configure Windows Firewall to block TCP port 110 and TCP port 995.

Correct Answer: B
QUESTION 270
You have an Exchange Server 2010 organization named contoso.com. You have a Client Access server named cas1.contoso.com that is accessible on the Internet. You access cas1.contoso.com on the Internet by using the following domain names:

- mail.contoso.com
- autodiscover.contoso.com

You need to ensure that mobile devices can use Autodiscover on the Internet. What should you do?

A. Set the external URL for Microsoft-Server-ActiveSync to $NULL.
B. Set the external URL for Microsoft-Server-ActiveSync to https://cas1.contoso.com/MicrosoftServerActiveSync.
C. Set the external URL for Microsoft-Server-ActiveSync to https://mail.contoso.com /Microsoft-Server-ActiveSync.
D. Set the external URL for Microsoft-Server-ActiveSync to http://autodiscover.contoso.com/Microsoft-Server-ActiveSync.

Correct Answer: C

QUESTION 271
You have a server that runs Windows Server 2008 Service Pack 2 (SP2). You plan to install Exchange Server 2010 on the server. You need to install the Exchange Server 2010 prerequisites for the Mailbox, Client Access, and Hub Transport server roles. What should you do on the server?

A. Install Microsoft .NET Framework 3.5 Service Pack 1 (SP1).
   Install Windows Management Framework.
   Run ServerManagerCmd.exe IP ExchangeTypical.xml.

B. Install Microsoft .NET Framework 3.5 Service Pack 1 (SP1).
   Install Windows Remote Management (WinRM) 2.0.
   Run ServerManagerCmd.exe IP ExchangeBase.xml.

C. Install Windows Management Framework.
   Install Message Queuing.
   Install the Web Server role.

D. Install Windows Management Framework.
   Install the Web Server role.
   Install the RPC over HTTP Proxy component.

Correct Answer: A
QUESTION 272
You have an Exchange Server 2010 organization. You need to ensure that you can install the Exchange Server 2010 administration tools on a desktop computer that runs Windows 7. What should you install first?

A. IIS 6 Management Console.
   Microsoft .NET Framework 3.5.1.

B. IIS 6 Metabase.
   Remote Server Administration Tools.

C. Internet Explorer 8.
   Windows Process Activation Service.

D. Management Service.
   Microsoft Message Queue (MSMQ) Server.

Correct Answer: A

QUESTION 273
Your company has a main office and a branch office. All branch office administrators are members of a custom management role group. The role group is configured to allow members to manage recipients. The branch office administrators are also members of the Domain Administrators security group. The organization contains one Exchange Server 2010 server. You discover that the branch office administrators can manage recipients in both offices. You need to ensure that the branch office administrators can manage recipients in their assigned branch office only. What should you do?

A. Create a new management role entry for the role group.
B. Create a management role assignment policy and associate the policy to the role group.
C. Create a management scope and associate the scope to the role group. Set a recipient filter for the management scope.
D. Remove the branch office administrators from the Domain Admins group. Add the branch office recipients to the role group.

Correct Answer: C

QUESTION 274
You have an Exchange Server 2010 organization that contains 20 mailbox databases. You configure each database to retain all deleted items for 30 days. You need to ensure that all items that pass the retention period are permanently deleted daily between 02:00 and 06:00. Which cmdlet should you use?
A. Set-MailboxDatabase.
B. Set-MailboxServer.
C. Set-OrganizationConfig.
D. Set-RetentionPolicy.

Correct Answer: A

QUESTION 275
You have two Exchange Server 2010 Mailbox servers named Server1 and Server2. You need to move a user’s mailbox from Server1 to Server2. Your solution must minimize downtime for the user. Which cmdlet should you run?

A. Movemailbox.
B. Export-Mailbox.
C. Set-MoveRequest.
D. New-MoveRequest.

Correct Answer: D

QUESTION 276
You have an Exchange Server 2010 organization named contoso.com. Your company is investigating a user named User1. You need to prevent User1 from permanently deleting items from his mailbox. What should you run?

A. Set-Mailbox User1 LitigationHoldEnabled $true.
B. Set-Mailbox User1 ModerationEnabled $true.
C. Set-Mailbox User1 RetainDeletedItemsUntilBackup $true.
D. Set-Mailbox User1 RetentionHoldEnabled $true.

Correct Answer: A

QUESTION 277
You need to group a set of cmdlets for administrative delegation. What should you create?

A. A managed folder mailbox policy.
B. A new distribution group.
C. A new management role.
D. A new role assignment policy.

Correct Answer: C

QUESTION 278
You have an Exchange Server 2010 organization. You need to ensure that a user can open a resource mailbox. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two).

A. From Microsoft Office Outlook, modify the properties of the resource mailbox.
B. From the Exchange Management Console, create a new sharing policy.
C. From the Exchange Management Shell, set the ResourceDelegates parameter for the resource mailbox.
D. From the Active Directory Users and Computers console, reset the password for the account associated to the resource mailbox, and then provide the password to the user.

Correct Answer: AC

QUESTION 279
You have an Exchange Server 2010 organization. You need to ensure that all users in the organization can view the availability of a company projector. What should you create for the projector?

A. A distribution group.
B. A mailbox.
C. A mail-enabled contact.
D. A sharing policy.

Correct Answer: B

QUESTION 280
You have an Exchange Server 2010 organization. A user named User1 reports that some of the meetings in her calendar display incorrect start times. You verify that the meeting organizers have the correct start times for all of the meetings. You need to ensure that all of the meetings in User1’s calendar have the correct start times. What should you do?

A. Run the Set-MailboxCalendarConfiguration cmdlet.
B. Set the schedule for the Calendar Repair Assistant (CRA).
C. From User1’s computer, run Outlook.exe /CleanFreeBusy.
D. From the properties of User1’s mailbox, modify the Calendar Settings.

Correct Answer: B

QUESTION 281
You have an Exchange Server 2010 organization. You create a distribution group for all users in your company. You need to ensure that new users can add their mailboxes to the distribution group.
What should you do?

A. Modify the group scope of the distribution group.
B. Modify the approval mode of the distribution group.
C. Modify the security settings of the distribution group.
D. Modify the authentication settings of the ECP virtual directory.

**Correct Answer: B**

**QUESTION 282**
You have an Exchange Server 2010 organization. You need to modify the permissions of a public folder. Which tool should you use?

A. Exchange Control Panel (ECP).
B. Exchange Management Console (EMC).
C. Microsoft Office Outlook.
D. Public Folder Management Console.

**Correct Answer: C**

**QUESTION 283**
Your network contains an Exchange Server 2010 server. You need to prevent a user named User1 from using Exchange ActiveSync to download attachments that are larger than 50KB. The solution must not affect other users. What should you do?

A. Modify the properties of User1’s mailbox.
B. Run the Manage Mobile Phone wizard for User1’s mailbox.
C. Create a new Exchange ActiveSync mailbox policy and assign the policy to User1.
D. Create a new Exchange ActiveSync virtual directory and configure User1 to connect to the new virtual directory.

**Correct Answer: C**

**QUESTION 284**
Your network contains a single Active Directory site. You install 10 new Exchange Server 2010 Client Access servers. All servers are configured to use a wildcard certificate. Users connect to their mailboxes by using Windows Mobile 6.5 devices. All devices are configured to connect to cas.contoso.com. You need to ensure that users can connect to their mailboxes by using mail.contoso.com. Which cmdlet should you run?

A. Set-ActiveSyncDeviceAccessRule.
B. Set-ActiveSyncMailboxPolicy.
C. Set-ActiveSyncOrganizationSetting.
D. Set-ActiveSyncVirtualDirectory.

Correct Answer: D

QUESTION 285
You have an Exchange Server 2010 organization named contoso.com. Your organization contains the following:

- Two Client Access Servers named CAS1 and CAS2.
- An Outlook Anywhere external URL that is set to oa.contoso.com.

You need to issue an X.509 certificate for Outlook Anywhere on CAS1.contoso.com. What domain name should you specify for the certificate?

B. oa.contoso.com.
C. CAS1.contoso.com.
D. OWA.contoso.com.

Correct Answer: A

QUESTION 286
You have an Exchange Server 2010 organization. All users on the network run Microsoft Office Outlook 2010 to access their mailboxes. Outlook 2010 is configured for Outlook Anywhere by using Autodiscover. You create a Client Access server array named outlook.contoso.com. You verify that all computers can resolve outlook.contoso.com. You discover that users do not connect to the Client Access server array name from Outlook 2010. You need to ensure that all users connect to the Client Access server array to access their mailboxes. What should you do?

A. Modify the authentication settings of the RPC virtual directory.
B. Modify the RPC Client Access server property of the mailbox databases.
C. Set the Outlook Anywhere FQDN to outlook.contoso.com.
D. Set the external URL of the Exchange Web Services virtual directory to https://outlook.contoso.com/ews.

Correct Answer: B

QUESTION 287
You purchase a wildcard certificate. You plan to use the certificate for Outlook Anywhere. You need to configure an Exchange organization to use the certificate. What should you do first?

A. From the Exchange Management Shell, modify the properties of the WEB Outlook Provider.
B. From the Exchange Management Shell, modify the properties of the EXPR Outlook Provider.
C. From the Internet Information Services (IIS) Manager, modify the properties of the RPC virtual directory.
D. From the Internet Information Services (IIS) Manager, modify the properties of the Autodiscover virtual directory.

Correct Answer: B

QUESTION 288
You have an Exchange Server 2010 organization. All users access their mailboxes by using Microsoft Office Outlook 2007, Outlook Anywhere, and Autodiscover. You need to prevent users who have computers that are joined to the domain from being prompted for authentication when they use Outlook Anywhere. All other users must be prompted for authentication when they use Outlook Anywhere. What should you do?

A. Configure Outlook Anywhere to use Basic authentication. Enable Basic authentication and NTLM authentication on the RPC virtual directory.
B. Configure Outlook Anywhere to use NTLM authentication. Enable Basic authentication and NTLM authentication on the RPC virtual directory.
C. Configure Outlook Anywhere to use Basic authentication. Enable Basic authentication and NTLM authentication on the RpcWithCert virtual directory.
D. Configure Outlook Anywhere to use NTLM authentication. Enable Basic authentication and NTLM authentication on the RpcWithCert virtual directory.

Correct Answer: B

QUESTION 289
Your company's organization is authoritative for the contoso.com domain. Your network contains a Windows Server 2008 R2 certification authority (CA). You have an Exchange Server 2010 server named Server1. Server1 has the Client Access, Hub Transport, and Mailbox server roles installed. You plan to create a federated sharing relationship between your company and another company named Northwind Traders. Northwind Traders has an internal root CA. You need to install a certificate that can be used to create the federated trust. The solution must minimize costs. What should you do from Server1?

A. Generate a self-signed certificate.
B. Request a Computer certificate from the contoso.com CA.
C. Create a computer certificate request and submit the request to a third party trusted CA.
D. Create a computer certificate request and submit the request to the Northwind Traders CA.

Download the complete collection of Exam's Real Q&As  www.ensurepass.com
Correct Answer: C

QUESTION 290
You have an Exchange Server 2010 organization. You need to prevent users from changing their password using Outlook Web App (OWA). What should you do?

A. From the Exchange Management Console (EMC), modify the authentication settings of the ECP virtual directory.
B. From the Exchange Management Console (EMC), modify the segmentation settings of the OWA virtual directory.
C. From the Internet Information Services (IIS) Manager, modify the application settings of the ECP virtual directory.
D. From the Internet Information Services (IIS) Manager, modify the authentication settings of the OWA virtual directory.

Correct Answer: B

QUESTION 291
You have an Exchange Server 2010 organization. Users access their mailboxes using Microsoft Office Outlook 2010 and Outlook Web App (OWA). Users report that they cannot open Information Rights Management (IRM) protected email messages in OWA. Users can open IRM protected email from Outlook 2010. You need to ensure that users can open IRM protected email in OWA. What should you do?

A. Modify the organization's IRM configuration for OWA.
B. Instruct the users to add the OWA URL to their Trusted sites.
C. Modify the Active Directory Rights Management Services (AD RMS) Prelicensing Agent on the Hub Transport servers.
D. Add a Federated Delivery mailbox to the Active Directory Rights Management Services (AD RMS) SuperUsers group.

Correct Answer: D

QUESTION 292
You have an Exchange Server 2010 organization. A user named Admin1 sends frequent email messages to a moderated recipient named Group1. You need to ensure that all email messages sent by Admin1 to Group1 are delivered immediately. What should you do?

A. Modify the permissions of Admin1.
B. Modify the permissions of Group1.
C. Configure Admin1 as the owner of Group1.
D. Configure Admin1 as a moderator for Group1.

Correct Answer: D

QUESTION 293
You have an Exchange Server 2010 organization named contoso.com. You need to add a disclaimer to all email messages sent by members of a mail-enabled group named Group1. The solution must only affect email messages sent to the Internet. What should you do?

A. From the Exchange Management Console (EMC), create a transport rule.
B. From the Exchange Management Console (EMC), modify the mail flow settings of Group1.
C. From the Exchange Management Shell, run the NewRemoteDomain cmdlet, and then run the Set-SendConnector cmdlet.
D. From the Exchange Management Shell, run the NewSystemMessage cmdlet, and then run the Set-SendConnector cmdlet.

Correct Answer: A

QUESTION 294
Your company acquires a new internet domain name. You need to ensure that all users can receive email messages sent to the new domain name. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two).

A. Modify the email address policy.
B. Create an Authoritative accepted domain.
C. Create an External Relay accepted domain.
D. Modify the properties of the default Receive connector.
E. Generate a new Exchange certificate that contains the new domain name.

Correct Answer: AB

QUESTION 295
You have an Exchange Server 2010 organization that contains 50 Hub Transport servers. You need to minimize the amount of disk space used to store shadow copies of messages on the Hub Transport servers. What should you do?

A. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
B. From the Exchange Management Shell, run the Set-TransportServer cmdlet.
C. From the Exchange Management Console (EMC), modify the transport settings.
D. From the Exchange Management Console (EMC), modify the properties of the Hub Transport server.
QUESTION 296

A. Back up the system state.
B. Run the ExportEdgeConfig.PS1 script.
C. Run the Export-ExchangeCertificate cmdlet.
D. Run the New-EdgeSyncServiceConfig cmdlet.
E. Run the Export-TransportRuleCollection cmdlet.

Correct Answer: BE

QUESTION 297
You have an Active Directory forest named contoso.com. You install a new Exchange Server 2010 organization that contains a Client Access server named CAS1. You need to configure certificates in the organization to support the following client connections:

- Autodiscover.
- Outlook Anywhere.
- Exchange ActiveSync.

What should you do?

A. Re-issue a self-signed certificate to CAS1.
B. Configure the Default Web Site on CAS1 to require SSL.
C. Issue a trusted certificate that contains multiple subject alternate names.
D. Install Active Directory Rights Management Service (AD RMS) on a member server.

Correct Answer: C

QUESTION 298
You have an Exchange Server 2010 organization. You need to ensure that a user named User1 can access his mailbox using Outlook Web App only. What should you do?

A. Modify the mailbox features for User1.
B. Enable and configure Outlook Anywhere.
C. Create an Outlook Web App Mailbox policy.
D. Remove the Autodiscover record from the DNS zone.

Correct Answer: A

QUESTION 299
You have an Exchange Server 2010 organization. You plan to enable federated sharing. You need to create a DNS record to store the Application Identifier (AppID) of the domain for the federated trust. Which type of record should you create?

A. A.
B. CNAME.
C. SRV.
D. TXT.

Correct Answer: D

QUESTION 300
You have an Exchange Server 2010 organization. The organization is authoritative for the domain contoso.com. You create a federated trust. You need to ensure that federated partners can automatically locate the Client Access servers in the organization. What should you create from an external DNS server?

A. an A record for autodiscover.contoso.com.
B. an A record for FederatedSharing.contoso.com.

Correct Answer: A

QUESTION 301
You have an Exchange Server 2010 organization. You need to modify the path for the message queue database on a Hub Transport server. What should you do?

A. Run the Set-TransportServer cmdlet.
B. Run the Set-TransportConfig cmdlet.
C. Modify the EdgeTransport.exe.config file.
D. Modify the MSExchangeTransport.exe.config file.

Correct Answer: C
QUESTION 302
You have an Exchange Server 2010 organization that contains an Edge Transport server named Edge1. All email messages to the Internet are sent from Edge1. You need to prevent all members of a group named Group1 from sending email messages to the Internet. Your solution must provide a custom non-delivery report (NDR) message to the users when they send an email message to the Internet. What should you create?

A. A custom MailTip and a transport rule.
B. A custom MailTip and a remote and a Send connector.
C. A custom Delivery Status Notification message and a transport rule.
D. A custom Delivery Status Notification message and a Send connector.

Correct Answer: C

QUESTION 303
Your company has a main office and 20 branch offices. Each office contains an Exchange Server 2010 Mailbox server and an Exchange Server 2010 Hub Transport server. Each office is configured as a separate Active Directory site. Each branch office site has one IP site link that connects to the main office site. You need to ensure that all email sent between offices is routed through the Hub Transport server in the main office. What should you do?

A. From the Exchange Management Shell, run the Set-ADSite cmdlet.
B. From the Exchange Management Shell, run the Set-ADSiteLink cmdlet.
C. From the Exchange Management Console (EMC), modify the Receive connector for the Hub Transport server in the main office.
D. From the Exchange Management Console (EMC), create a new Send connector for each branch office. Configure the Hub Transport server in the main office as a source server for each Send connector.

Correct Answer: A

QUESTION 304
You have an Exchange Server 2010 organization. You discover that messages sent to the Internet include internal Exchange routing information in the message header. You need to prevent internal routing information from being sent to external recipients. What should you do?

A. Create a new remote domain.
B. Modify the permissions of the Send connector.
C. Modify the properties of the sender reputation feature.
D. Enable domain security on the default Receive connector.

Correct Answer: B

QUESTION 305
You install an Exchange Server 2010 Hub Transport server named Hub1. You need to ensure that Hub1 can receive email messages sent from Internet hosts. What should you do?

A. Enable the Anonymous user’s permission group for the Client Hub1 Receive connector.
B. Enable the Anonymous user’s permission group for the Default Hub1 Receive connector.
C. Create a Receive connector and set the intended use to Client. Modify the port for the connector.
D. Create a Receive connector and set the intended use to Custom. Modify the remote IP addresses range for the connector.

Correct Answer: B

QUESTION 306
You have an Exchange Server 2010 Mailbox server. You need to view the last logon time and the number of email messages in the mailbox of each user in the organization. Which cmdlet should you run?

A. Get-LogonStatistics.
B. Get-MailboxMessageConfiguration.
C. Get-MailboxStatistics.
D. Get-StoreUsageStatistics.

Correct Answer: C

QUESTION 307
You have an Exchange Server 2010 database availability group (DAG) that contains five members and a mailbox database named DB1. You need to identify which servers have a copy of DB1. The solution must also identify the log replay lag times for each copy. Which command should you run?

A. Get-AvailabilityConfig Identity DB1 | FL.
B. Get-DatabaseAvailabilityGroup Identity DB1 | FL.
C. Get-MailboxDatabase Identity DB1 | FL.
D. Get-MailboxDatabaseCopyStatus Identity DB1 | FL.

Correct Answer: C
QUESTION 308
You have an Exchange Server 2010 organization. You need to view the replication status of a mailbox database copy. What should you do?

A. From the Exchange Management Shell, run the Test-ServiceHealth cmdlet.
B. From the Exchange Management Shell, run the Get-DatabaseAvailabilityGroup cmdlet.
C. From the Exchange Management Console (EMC), view the properties of the database copy.
D. From the Exchange Management Console (EMC), view the properties of the Mailbox server.

Correct Answer: C

QUESTION 309
You have an Exchange Server 2010 organization that contains a Mailbox server named MBX1, a Client Access server named CAS1, and a Hub Transport server named Hub1. Some users report that they have performance issues when they use Microsoft Office Outlook. You need to gather the RPC performance data from the servers. What should you do?

A. From CAS1 and Hub1, run the Mail Flow Troubleshooter.
B. From CAS1 and Hub1, run the Get-MessageTrackingLog cmdlet.
C. From MBX1 and CAS1, run the Exchange Best Practice Analyzer.
D. From MBX1 and CAS1, run the Exchange Troubleshooting Assistant.

Correct Answer: D

QUESTION 310
You have an Exchange Server 2010 organization. An internal user named User1 sends a confidential message to another internal user named User2. User1 does not have any administrative privileges in the organization. You need to ensure that User1 can identify whether the message was successfully delivered. What should you instruct User1 to do?

A. View the message headers in the Sent Items folder.
B. Open Microsoft Office Outlook and modify the read receipt settings.
C. Open Microsoft Office Outlook and modify the delivery receipt settings.
D. Open the Exchange Control Panel (ECP) and select Organize Email.

Correct Answer: D

QUESTION 311
You deploy a new Exchange Server 2010 organization. You send a test message to an external recipient and immediately receive the following nondelivery report (NDR):

Download the complete collection of Exam’s Real Q&As www.ensurepass.com
"Delivery has failed to these recipients or groups:
User1@nwtraders.com (user1@nwtraders.com).
The recipient's email system isn't accepting messages now. Please try resending this message later
or contact the recipient directly."

You verify that you can successfully send an email message to User1@nwtraders.com from an
external email system. You need to ensure that you can send email messages to external recipients
from within the Exchange organization. What should you do?

A. Create a remote domain.
B. Create a Send connector.
C. Configure the Hub Transport server to use an Internet DNS server.
D. Modify the remote IP address range of the default Receive connector.

**Correct Answer: B**

**QUESTION 312**
You deploy an Exchange Server 2010 organization that contains one Mailbox server in a lab
environment. The lab environment is not connected to the Internet. You need to verify that
Autodiscover is configured correctly for client connectivity. What should you run?

A. The Best Practice Analyzer.
B. The Remote Connectivity Analyzer.
C. The Test-MapiConnectivity cmdlet.
D. The Test-OutlookWebServices cmdlet.

**Correct Answer: D**

**QUESTION 313**
You have an Exchange Server 2010 server that has IMAP4 enabled. All users connect to the
Exchange server using an IMAP4 client. You need to verify whether users can send email to the
Internet using the Exchange server. What should you do?

A. From the server, run the Test-ImapConnectivity cmdlet.
B. From the server, run the Test-OutlookConnectivity cmdlet.
C. From a client, attempt a connection to TCP port 143 using telnet.
D. From a client, attempt a connection to TCP port 587 using telnet.

**Correct Answer: D**
QUESTION 314
You have an Exchange Server 2010 organization. You need to identify whether an administrator has made a configuration change in the Exchange organization. What should you run?

A. Get-EventLogLevel.
C. Exchange Best Practices Analyzer.
D. Microsoft Baseline Security Analyzer (MBSA).

Correct Answer: C

QUESTION 315
You have an Exchange Server 2010 organization that contains five Mailbox servers. You need to identify all of the mailboxes that are larger than 5 GB. Which command should you run?

Correct Answer: C

QUESTION 316
You have an Exchange Server 2010 server that has message tracking enabled. You need to modify the storage location of the message tracking logs. What should you do?

A. From the Exchange Management Shell, run the Set-EventLogLevel cmdlet.
B. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
C. From the Exchange Management Console (EMC), modify the properties of the mailbox database.
D. From the Exchange Management Console (EMC), modify the properties of the Hub Transport server object.

Correct Answer: D

QUESTION 317
You have a database availability group (DAG) that contains two servers named MBX1 and MBX2. You discover that a mailbox database named DB2 is in a FailedAndSuspended state on MBX2. You need to reseed DB2 to MBX2. You must achieve this goal by using the minimum amount of administrative effort. Which cmdlet should you run?
A. Restore-DatabaseAvailabilityGroup.
B. Resume-MailboxDatabaseCopy.
C. Set-DatabaseAvailabilityGroup.
D. Update-MailboxDatabaseCopy.

Correct Answer: D

QUESTION 318
Your network contains two offices named Office1 and Office2. The offices are connected by a WAN link. Each office is configured as an Active Directory site. You have an Exchange Server 2010 organization. The organization contains four Mailbox servers that are members of a database availability group (DAG). Two servers are located in each site. All Exchange and non-Exchange servers in Office1 become unavailable. Users in both offices report that they cannot access their mailboxes. You notice that all Mailbox database copies in Office2 have a Failed status. You need to mount all Mailbox database copies in Office2. What should you do first?

A. Run Cluster.exe /ForceQuorum on the Mailbox server in Office2.
B. Run the Set-DatabaseAvailabilityGroup cmdlet on the Mailbox server in Office2.
C. Evict the Mailbox server from Office2 from the cluster.
D. Configure an Alternate File Share Witness for the DAG.

Correct Answer: A

QUESTION 319
You have an Exchange Server 2010 organization. The organization contains two Mailbox servers named Server1 and Server2. Both servers are members of a database availability group (DAG) named DAG1. Server1 and Server2 have a copy of a mailbox database named DB1. You need to remove the copy of DB1 from Server1. What should you do?

A. From the Exchange Management Shell, run Clean-MailboxDatabase -Identity DB1.
B. From the Exchange Management Shell, run Remove-MailboxDatabase -Identity DB1\Server1.
C. From the Exchange Management Console (EMC), right-click the database copy and select Remove.
D. From the Exchange Management Console (EMC), right-click DAG1 and select Manage Database Availability Group Membership. Remove Server1 from the list and click Manage.

Correct Answer: C

QUESTION 320
Your network contains an Exchange Server 2010 Mailbox server. The server has one mailbox database. A user named User1 reports that he has multiple corrupted email messages in his
mailbox. You need to recover User1’s email messages. The solution must not delete any other email messages in the mailbox database. What should you do?

A. Create a new Mailbox Recovery Database, restore a backup of the database file, and then run the Export-Mailbox cmdlet.
B. Create a new Mailbox Recovery Database, restore a backup of the database file, and then run the Restore-Mailbox cmdlet.
C. Create a database availability group (DAG), restore a backup of the mailbox database file, and then run the Restore-Mailbox cmdlet.
D. Create a database availability group (DAG), restore a backup of the mailbox database file, and then run the Export-Mailbox cmdlet.

Correct Answer: B

QUESTION 321
You have an Exchange Server 2010 organization that contains a single Mailbox server. The Mailbox server contains a mailbox database named Database1. Database1 fails. You need to restore a backup of Database1. What should you do before you restore Database1?

A. Create a recovery storage group.
B. Create a Recovery Mailbox database.
C. Set the Recovery parameter on Database1 to $true.
D. Set the Allow-FileRestore parameter on Database1 to $true.

Correct Answer: C

QUESTION 322
You have an Exchange Server 2010 organization that contains a Mailbox server named Server1. From Server1, a user named Admin1 runs the Export-Mailbox Identity "User1" PSTFolderPath C:\Folder\User1.pst command. Admin1 reports that she receives the following error message: "The term Export-Mailbox is not recognized as the name of a cmdlet." You need to ensure that Admin1 can run the command successfully. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two).

A. Create a Personal Archive for User1.
B. Create a Personal Archive for Admin1.
C. Install Microsoft Office Outlook 2010 on the Mailbox server.
D. Add Admin1 to the Exchange Recipient Administrators security group.
E. Run the New-RoleGroup cmdlet, and then run the New-ManagementRoleAssignment cmdlet.
Correct Answer: CE

QUESTION 323
You have an Exchange Server 2010 server that contains a single mailbox database. All users run Microsoft Office Outlook and Outlook Web App. You discover that users cannot restore email messages from the Recover Deleted Items folder. You need to ensure that users can restore email messages from the Recover Deleted Items folder. What should you do?

A. From the Exchange Management Console (EMC), modify the properties of the mailbox database.
B. From the Exchange Management Console (EMC), modify the properties of the Mailbox server object.
C. From the Exchange Management Shell, create a management role and then assign the role to all users.
D. From the Exchange Management Shell, create a retention policy and then assign the policy to all users.

Correct Answer: A

QUESTION 324
Your network contains two Exchange Server 2010 Client Access servers named CAS1 and CAS2 and two Mailbox servers named MBX1 and MBX2. You have one mailbox database and one public folder database. You need to ensure that the public folders are available if MBX1 fails. What should you do?

A. Create a Failover Cluster and then add MBX1 and MBX2 to the Failover Cluster.
B. Create a database availability group (DAG) and then add MBX1 and MBX2 to the DAG.
C. Create a public folder database on MBX2 and then modify the replication settings on each public folder.
D. Create a public folder database on MBX2 and then modify the replication settings on the public folder database.

Correct Answer: C

QUESTION 325
You deploy a new Exchange Server 2010 organization that contains three Mailbox servers. Each server is located in a separate datacenter. You create a public folder named Public1. You need to ensure that a copy of Public1 is stored in each datacenter. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two).
A. From the Public Folder Management Console, modify the properties of Public1.
B. From the Exchange Management Shell, run the Update-PublicFolder cmdlet.
C. From the Exchange Management Console (EMC), create a database availability group (DAG).
D. From the Exchange Management Console (EMC), create a public folder database on all of the Mailbox servers.
E. From the Exchange Management Console (EMC), add each of the Mailbox servers to a database availability group (DAG).

Correct Answer: AD

QUESTION 326
You have an Exchange Server 2010 organization that contains five Mailbox servers. A Mailbox server named Server1 hosts a mailbox database named DB1. DB1 contains 300 user mailboxes. You create a new public folder database named PUBLIC2 on Server1. You need to ensure that all users that have mailboxes in DB1 store new public folders in PUBLIC2. What should you do?

A. From the Exchange Management Console, modify the properties of DB1.
B. From the Exchange Management Console, modify the properties of PUBLIC2.
C. From the Exchange Management Console, modify the properties of Server1.
D. From the Exchange Management Shell, modify the properties of each mailbox.

Correct Answer: A

QUESTION 327
You have an Exchange Server 2010 organization. You need to prevent users from changing their password by using Outlook Web App (OWA). What should you do?

A. Create a Group Policy Object.
B. Create an Outlook Web App Mailbox policy.
C. Modify the authentication settings of the OWA virtual directory.
D. Modify the authentication settings of the IISADMPWD virtual directory.

Correct Answer: C

QUESTION 328
You configure Outlook Web App (OWA) to require SSL. A user named User1 reports that when she connects to OWA, she receives a Web site security certificate warning message. You need to prevent User1 from receiving the warning message when she connects to OWA. What should you do?

A. On User1’s computer, install the server’s root certificate into the Trusted Root Certification
Authorities store.
B. On the Client Access server, install the server’s root certificate into the Trusted Root Certification Authorities store.
C. From the Exchange Management Console (EMC), assign an Outlook Web App mailbox policy to User1.
D. From the Exchange Management Console (EMC), open the OWA (Default Web Site) Properties. Configure the logon format to use the user principal name (UPN).

Correct Answer: A

QUESTION 329
You have an Exchange Server 2010 organization. Users access their email from the Internet by using Outlook Web App. You need to prevent users from downloading ZIP files from Outlook Web App. The solution must ensure that users can download ZIP files using Microsoft Office Outlook. What should you do?
A. Configure the Content Filter agent.
B. Configure the Attachment Filter agent.
C. Create a managed folder mailbox policy.
D. Create an Outlook Web App Mailbox policy.

Correct Answer: D

QUESTION 330
You have an Exchange Server 2010 organization. You need to prevent users in the organization from changing passwords using Outlook Web App. The solution must not prevent users from changing passwords by using Windows. What should you do?
A. From the properties of the user accounts, configure the settings on the Account tab.
B. From the properties of the mailboxes, configure the settings on the Mailbox Features tab.
C. From the properties of the OWA virtual directory, configure the settings on the Segmentation tab.
D. From the properties of the OWA virtual directory, configure the settings on the Authentication tab.

Correct Answer: C

QUESTION 331
You need to perform an automated installation of an Exchange Server 2010 server. Which command should you include in your script?
QUESTION 332
You have two Exchange Server 2010 servers named Server1 and Server2. Both servers have the Client Access, Hub Transport, and Mailbox server roles installed. The servers are members of a database availability group (DAG). You need to ensure that all Microsoft Office Outlook users automatically connect to an available Client Access server if a single server or service fails. What should you do?

A. Create a Client Access server array. Create a new DNS record and add the IP addresses of both Client Access servers to the new DNS record.
B. Deploy a hardware load balancer. Create a DNS record for the virtual IP address of the load balancer. Create and configure a Client Access server array.
C. Install the Network Load Balancing feature on both servers. Assign a second IP address to each server. Create a Client Access server array and a new DNS record for the array.
D. Remove Server2 from the DAG. Create a Client Access server array, and then enable Datacenter Activation co-ordination. Install the Network Load Balancing feature on both servers.

Correct Answer: B

QUESTION 333
You have an Exchange Server 2010 organization that contains five Mailbox servers and five Client Access servers. All users in the organization connect to their mailboxes using Outlook Anywhere. You create a Client Access server array. You need to ensure that all users can connect to the Client Access server array. What should you do?

A. From the Exchange Management Shell, run the Set-Mailbox cmdlet.
B. From the Exchange Management Shell, run the Set-MailboxDatabase cmdlet.
C. From the Exchange Management Console (EMC), modify the properties of each mailbox database.
D. From the Exchange Management Console (EMC), modify the properties of each Client Access server object.

Correct Answer: B

QUESTION 334

A. Rename the Server1 computer account to Server2.  
   Join Server2 to the domain.

B. Rename Server2 to Server1.  
   Reset the Server1 computer account.  
   Join Server1 to the domain.

C. Delete the computer account for Server1.  
   Join Server2 to the domain.  
   Rename Server2 to Server1.

D. Delete the computer account for Server1.  
   Rename Server2 to Server1.  
   Create a new computer account for Server1.  
   Join Server1 to the domain.

Correct Answer: B

QUESTION 335
You have two Exchange Server 2010 Client Access servers named CAS1 and CAS2. CAS1 and CAS2 are in an Active Directory site named Site1. Both servers are members of a Client Access server array. CAS1 fails. You install a new Client Access server named CAS3 in a new site. You need to ensure that CAS3 is a member of the Client Access server array. What should you do?

A. Move CAS3 to Site1.  
B. Run the Set-ClientAccessArray cmdlet.  
C. Run the Setup /M:RecoverServer command.  
D. Modify the DNS record of the Client Access server array.

Correct Answer: A

QUESTION 336
You have an Active Directory forest that runs Windows Server 2008. You have an Exchange Server 2010 organization that contains a Hub Transport server named Hub1. Hub1 fails. An administrator deletes the computer account and all other references of Hub1 from Active Directory. You need to replace the Hub Transport server role on a new server. You must achieve this goal by using the minimum amount of administrative effort. What should you do?
B. On the new server, run the Exchange Server installation program and then select the Hub Transport role.
C. From Ntdsutil, perform an authoritative restore and then create a managed service account named Hub1.
D. From Ntdsutil, perform an authoritative restore and then create a CNAME record for Hub1 that points to the new server.

Correct Answer: B

QUESTION 337
Your network contains an Exchange Server 2010 server. All users access their mailboxes using only Microsoft Office Outlook 2010. You create a policy that archives all email messages that are older than 365 days. You need to ensure that all users can retain certain email messages for up to five years. The solution must allow users to specify which email messages are retained. Which two object types should you create? (Each correct answer presents part of the solution. Choose two).

A. A managed folder mailbox policy.
B. A retention hold.
C. A retention policy.
D. Managed custom folders.
E. Retention tags.

Correct Answer: CE

QUESTION 338
Your network contains Mailbox servers that run Exchange Server 2007 and Exchange Server 2010. You need to ensure that all email messages located in the Inbox folders of all users are deleted after 120 days. What should you create first?

A. A new managed custom folder.
B. A new message classification.
C. A new retention policy.
D. New managed content settings.

Correct Answer: D

QUESTION 339
You have an Exchange Server 2010 organization named contoso.com. All users have a Personal Archive. You need to ensure that messages that are older than 90 days are moved from the user's mailbox to their Personal Archive. What should you do?
A. Create a retention tag.
   Assign the retention tag to a retention policy.
   Apply the retention policy to all users.

B. Create a retention tag.
   Assign the retention tag to a retention policy.
   Create a journal rule.

C. Create a managed custom folder.
   Run the New Managed Content Settings wizard.
   Create a journal rule.

D. Run the New Managed Content Settings wizard.
   Create a new managed folder mailbox policy.
   Apply the policy to all users.

Correct Answer: A

QUESTION 340
You have an Exchange Server 2010 organization. All users run Microsoft Office Outlook 2010. You need to prevent internal users from sending email messages that contain the phrase "Internal Private" to external users. What should you configure?

A. Content filtering.
B. Message classifications.
C. Outlook protection rules.
D. Transport rules.

Correct Answer: D

QUESTION 341
You have an Exchange Server 2010 organization. You need to ensure that users in the organization are notified before they send email messages to external recipients. Which cmdlet should you run?

A. Set-Mailbox.
B. Set-OrganizationConfig.
C. Set-TransportAgent.
D. Set-TransportConfig.

Correct Answer: B
QUESTION 342
You have an Exchange Server 2010 organization. You need to create Personal Archives. Which tool should you use?

A. Active Directory Users and Computers.
B. The Exchange Control Panel (ECP).
C. The Exchange Management Console (EMC).
D. Microsoft Office Outlook.

Correct Answer: C

QUESTION 343
You have an Exchange Server 2010 organization. A user named User1 connects to his mailbox using Microsoft Office Outlook. User1 reports that he is unable to send encrypted email messages to an external recipient named User2. You verify that User1 and User2 have email encryption certificates. You need to ensure that User1 can send encrypted email messages to User2. What should you do first?

A. Instruct User2 to add a delegate.
B. Instruct User2 to send a signed email message to User1.
C. Instruct User1 to send a signed email message to User2.
D. Instruct User1 to modify the sensitivity settings of the email message.

Correct Answer: B

QUESTION 344
You have an Exchange Server 2010 Edge Transport server named Server1. A partner organization has an Exchange Server 2010 Edge Transport server named Server2. You need to encrypt SMTP communication between Server1 and Server2. The solution must ensure that both servers use a trusted certificate. What should you do?

A. Enable Domain Security authentication.
B. Enable Exchange Server authentication.
C. Enable Externally Secured authentication.
D. Disable the Anonymous user’s permission group.

Correct Answer: A
Your company has an Exchange Server 2010 organization. The network contains an internal root certification authority (CA). You plan to add a disclaimer to all email messages sent by users in the company. You need to ensure that the disclaimer can be added to encrypted email messages. What should you do?

A. Instruct users to encrypt email messages by using IRM only.
B. Instruct users to encrypt email messages by using S/MIME only.
C. Enable the Content Filter agent on all of the Hub Transport servers.
D. Modify the priority of the Transport Rule agent on all of the Hub Transport servers.

Correct Answer: A

**QUESTION 346**

Your company has an Exchange Server 2010 Hub Transport server named Hub1. Hub1 receives all of the email sent to the company from the Internet. You install anti-spam agents on Hub1. You need to ensure that Hub1 only accepts messages sent to email addresses listed in Active Directory. What should you modify?

A. The anti-spam settings of Hub1.
B. The anti-spam settings of the organization.
C. The email address policy of the organization.
D. The properties of Hub1's default Receive connector.

Correct Answer: B

**QUESTION 347**

You install a new Exchange Server 2010 organization that contains a single server named Server1. Users report that they receive a large number of unsolicited commercial email (UCE) messages. You need to reduce the amount of UCE messages that the users in the organization receive. What should you do?

A. Run the AntispamCommon.ps1 script.
B. Run the InstallAntispamAgents.ps1 script.
C. Run the Set-ContentFilterConfig Enabled $true command.
D. Run the Set-TransportServer AntispamAgentsEnabled $true command.

Correct Answer: B

**QUESTION 348**

You have an Exchange 2010 Edge Transport server named Server1. You discover that anti-spam
updates have not been applied to Server1 for one month. You need to ensure that the most current anti-spam updates are installed on Server1. What should you do?

A.  At the command prompt, run the Wuauclt.exe /DetectNow command.
B.  At the command prompt, run the Wuauclt.exe /SelfUpdateManaged command.
C.  From the Exchange Management Shell, run the Get-AntispamUpdates cmdlet.
D.  From the Exchange Management Shell, run the Enable-AntispamUpdates UpdateMode Automatic command.

Correct Answer: A

QUESTION 349
You have an Exchange Server 2010 organization. A user named User1 reports that many of the email messages sent to him from the Internet are not delivered to his mailbox. You suspect that the email messages are incorrectly identified as spam. You need to temporarily disable anti-spam filtering for all email messages sent to User1. What should you do?

A.  From the Exchange Management Shell, run the Set-Mailbox cmdlet.
B.  From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
C.  From the Exchange Management Console (EMC), modify the content filtering properties.
D.  From the Exchange Management Console (EMC), modify the recipient filtering properties.

Correct Answer: A

QUESTION 350
You have a computer that runs Windows 7. You need to ensure that you can install the Exchange 2010 management tools on the computer. Which two actions should you perform? (Each correct present’s part of the solution. Choose two).

A.  Install Microsoft .NET Framework 3.5.1.
B.  Install Microsoft Message Queue (MSMQ) Server.
C.  Install the Internet Information Services (IIS) 6.0 Management console.
D.  Set the Net.TCP Port Sharing service to Automatic.
E.  Set the Net.TCP Port Sharing service to Automatic (Delayed start).

Correct Answer: AC

QUESTION 351
You have an Exchange organization that contains the Exchange servers shown in the following table:
You plan to move all mailboxes from Server2 and Server3 to Server4. You need to ensure that all users can send and receive email messages after their mailboxes are moved to Server4. What should you do?

A. Create an SMTP Site link.
B. Create a Routing Group and a Routing Group Connector.
C. Install the Exchange Server 2010 Hub Transport server role on Server4.
D. Install the Exchange Server 2010 Edge Transport server role on a new server.

Correct Answer: C

QUESTION 352
You have two Exchange Server 2010 servers named Server1 and Server2. Server1 has the Mailbox server role installed. Server2 has the Hub Transport and Client Access server roles installed. You need to ensure that users can send and receive email using Windows Live Mail or Microsoft Outlook Express. What should you do?

A. From the Command Prompt on Server1, run net start MSExchangePOP3.
B. From the Command Prompt on Server2, run net start MSExchangePOP3.
C. On Server1 and Server2, modify the properties of the MSExchangePOP3 (TCPin) Windows Firewall rule.
D. On Server1, modify the properties of the MSExchangeIMAP4 (TCPin) Windows Firewall rule. On Server2, modify the properties of the Client Receive connector.

Correct Answer: B

QUESTION 353
You have an Active Directory forest named contoso.com. You install a new Exchange Server 2010 organization that contains a Client Access server named CAS1. You need to configure certificates in the organization to support the following client connections:

- Autodiscover
- Outlook Anywhere
- Exchange ActiveSync
Your solution must minimize costs. What should you do?

A. Re-issue a self-signed certificate to CAS1.
B. Restore a previous version of the default self-signed certificate to CAS1.
C. Issue a trusted certificate that contains a single subject alternate name.
D. Issue a trusted certificate that contains multiple subject alternate names.

Correct Answer: D

QUESTION 354
You install a new Exchange Server 2010 organization that contains two Hub Transport servers named Hub1 and Hub2. Hub1 and Hub2 are configured as mail servers for your organization in the public DNS zone. You notice that Hub2 rejects all SMTP connections from Internet hosts. You need to ensure that Hub2 can receive email messages sent from Internet hosts. What should you do?

A. Uninstall the anti-spam agents from Hub1.
B. Install the same trusted public certificate on Hub1 and Hub2.
C. Modify the permissions for the Client Hub2 Receive connector.
D. Modify the permissions for the Default Hub2 Receive connector.

Correct Answer: D

QUESTION 355
Your network contains an Active Directory forest. All domain controllers run Windows Server 2008. You need to ensure that you can install an Exchange Server 2010 server in the Active Directory forest. What should you do?

A. From the Exchange Server 2010 installation media, run setup /ps.
B. From the Exchange Server 2010 installation media, run setup /NewProvisionedServer.
C. From the Windows Server 2008 installation media, run adprep.exe /forestprep.
D. From the Windows Server 2008 installation media, run adprep.exe /domainprep.

Correct Answer: A

QUESTION 356
You plan to deploy Exchange Server 2010 on a new server. The server will be a member of a database availability group (DAG). You need to identify the operating system that can be installed on the server to support Exchange Server 2010. Your solution must minimize costs. Which
operating system should you identify?

Correct Answer: D

QUESTION 357
Your Exchange Server 2010 organization contains several Mailbox servers. You need to identify the message latency between the Mailbox servers. What should you do?

A. Run the Test-Mailflow cmdlet.
B. Run the Test-OutlookConnectivity cmdlet.
C. Increase the MSExchangeTransport diagnostic logging level to Expert.
D. Increase the MSExchangeMailSubmission diagnostic logging level to Expert.

Correct Answer: A

QUESTION 358
Your network contains an Exchange Server 2010 server. You need to prevent email messages that contain specific words from being sent between users in the organization. What should you do?

A. Create a transport rule.
B. Create an Outlook Protection Rule.
C. Configure the content filtering feature.
D. Configure the sender reputation feature.

Correct Answer: A

QUESTION 359
You have an Exchange Server 2010 organization. You discover that many large email messages prevent average-size email messages from being sent to the Internet. You need to delete the large messages from the Hub Transport servers. Which tool should you use?

A. The Exchange Control Panel (ECP).
B. Message tracking.
C. The Queue Viewer.
D. Windows Explorer.

Correct Answer: C

QUESTION 360
You have an Exchange Server 2010 organization named contoso.com. You need to add a disclaimer to all email messages sent by members of a mail-enabled group named Group1. What should you do?

A. From the Exchange Control Panel (ECP), configure a MailTip.
B. From the Exchange Management Console (EMC), create a transport rule.
C. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.
D. From the Exchange Management Shell, run the New-SystemMessage cmdlet.

Correct Answer: B

QUESTION 361
You have an Exchange Server 2010 organization. You acquire a new Internet domain name. Users report that they cannot receive email sent to the new domain name. You verify that all users have the new domain name configured as an email address suffix. You need to ensure that users can receive email sent from the Internet to the new domain name. What should you create?

A. An Authoritative Accepted Domain.
B. An External Relay Accepted Domain.
C. A new Receive connector.
D. A remote domain.

Correct Answer: A

QUESTION 362
Your network contains an internal network and a perimeter network. You have one Exchange Server 2010 server on the internal network. You install Windows Server 2008 R2 on a new server in the perimeter network. You need to ensure that you can install the Edge Transport server role on the new server. What should you do?

A. Join the new server to an Active Directory domain.
B. Install Active Directory Lightweight Directory Services on the new server.
C. Run ImportEdgeConfig.ps1 on the existing Exchange Server 2010 server.
D. Open TCP port 389 and TCP port 3268 on the firewall between the perimeter network and the internal network.
QUESTION 363
You have an Exchange Server 2010 organization that contains 20 Mailbox servers. You plan to create 10 mailbox databases on each Mailbox server. You need to create a naming convention for all mailbox databases. What should you include in your naming convention?

A. For each mailbox database, provide a database name that is unique within the organization.
B. For each mailbox database, provide a database name that is unique within the Mailbox server.
C. For each mailbox database file, provide a file name that is unique within the organization.
D. For each mailbox database file, provide a file name that is unique within the Mailbox server.

Correct Answer: A

QUESTION 364
Your company has a main office and a branch office. The branch office administrators are the only members of a custom management role group. The role group is configured to allow members to manage recipients. You notice that the branch office administrators can manage recipients in both offices. You need to ensure that the branch office administrators can manage recipients in the branch office only. What should you do?

A. Create and associate a management scope to the role group.
B. Create and associate a management role assignment policy to the role group.
C. Create a new linked role group, and then add the branch office administrators to the role group.
D. Create a new role, and then add management role entries to the role.

Correct Answer: A

QUESTION 365
You have an Exchange 2010 Mailbox server. You need to ensure that deleted mailboxes are kept for 60 days. What should you do?

A. Create a Retention Policy.
B. Create a managed folder mailbox policy.
C. Modify the properties of the mailbox database.
D. Modify the properties of the mailbox server object.

Correct Answer: C

QUESTION 366
Your company has an Exchange Server 2010 organization. A user named User1 is configured as a Delegate for a user named User2. You need to ensure that User1 can add User2 in the From field when sending email messages. Messages that contain User2 in the From field must display User2 as the message sender when recipients receive the messages. What should you do?

A. Remove User1 as a delegate, then grant User1 Send As permissions to User2's mailbox.
B. Remove User1 as a delegate, then grant User1 Send on Behalf permissions to User2's mailbox.
C. Create a Sharing policy, then grant User1 Modify permissions to User2’s mailbox.
D. Create a Sharing policy, then grant User1 Full Mailbox permissions to User2's mailbox.

Correct Answer: A

**QUESTION 367**

Your network contains an Exchange Server 2007 Mailbox server named Server1 and an Exchange Server 2010 Mailbox server named Server2. You need to move a mailbox from Server1 to Server2. What should you do?

A. From Server1, run Movemailbox.
B. From Server2, run Movemailbox.
C. From Server1, run New-MoveRequest.
D. From Server2, run New-MoveRequest.

Correct Answer: D

**QUESTION 368**

You have an Exchange Server 2010 organization. You need to use Role Based Access Control (RBAC) to provide a user the ability to manage recipients in a specific organizational unit (OU). What should you do first?

A. Create a new direct role assignment.
B. Create a new management role assignment policy.
C. Create a new management scope.
D. Modify the default management scope.

Correct Answer: C

**QUESTION 369**

Your network contains an Exchange Server 2010 server. You need to prevent a user named User1 from downloading attachments larger than 50 KB when using Exchange ActiveSync. Your solution must not affect other users. What should you do first?

A. Create a new ActiveSync Device Access rule.
B. Create a new Exchange ActiveSync Mailbox policy.
C. Modify the properties of User1's mailbox.
D. Modify the properties of the default Exchange ActiveSync Mailbox policy.

Correct Answer: B

**QUESTION 370**
You have an Exchange Server 2010 organization. You need to create a resource record in DNS to support Autodiscover from the Internet. What type of resource record should you create?

A. Host (A).
B. Text (TXT).
C. Pointer (PTR).
D. Mail exchange (MX).

Correct Answer: A

**QUESTION 371**
You have an Exchange Server 2007 organization. All users on your network run Microsoft Office Outlook 2007 to access their mailboxes. Outlook 2007 is configured to connect using RPC over HTTP and Autodiscover. You perform a Typical installation of Exchange Server 2010 on a new server, and then move mailboxes to the new server. Users now report that they cannot access their mailboxes. You need to ensure that all users can access their mailboxes. What should you do from the new server?

A. Run the Switchover Server wizard.
B. Enable and configure Outlook Anywhere.
C. Create and configure a Client Access array.
D. Rename the OWA virtual directory to Exchange.

Correct Answer: B

**QUESTION 372**
You have an existing Exchange 2010 environment. Users report that they can share free/busy information with users at a federated partner, but they cannot share contacts with those users. You need to ensure that your users can share contacts with users at the federated partner. What should you modify?

A. The federation trust.
B. The EWS virtual directory.
C. The default sharing policy.
D. The organizational relationship.

Correct Answer: C

QUESTION 373

A. Create an OWA mailbox policy.
B. Create a managed folder mailbox policy.
C. Modify the properties of the OWA virtual directory.
D. Modify the properties of the public folder database.

Correct Answer: AC

QUESTION 374
You have an Exchange Server 2010 organization. You need to prevent users from changing their password using Outlook Web Access (OWA). What should you do?

A. Create a Group Policy Object.
B. Create an OWA mailbox policy.
C. Modify the authentication settings of the OWA virtual directory.
D. Modify the authentication settings of the IISADMPWD virtual directory.

Correct Answer: B

QUESTION 375
You have an Exchange Server 2010 organization that contains a Hub Transport server and an Edge Transport server. The Edge Transport server sends all SMTP mail to the Internet. You need to add a disclaimer to all internal and external email messages sent by users of your company. What should you do?

A. From the Hub Transport server, create a transport rule.
B. From the Edge Transport server, create a transport rule.
C. From the Hub Transport server, modify the properties of a Send connector.
D. From the Edge Transport server, modify the properties of a Send connector.

Correct Answer: A

QUESTION 376
You have an Exchange Server 2010 organization. You acquire a new Internet domain name. Users report that they cannot receive email sent to the new domain name. You verify that all users have the new domain name configured as an email address suffix. You need to ensure that users can receive email sent from the Internet to the new domain name. What should you create?

A. An Authoritative Accepted Domain.
B. An External Relay Accepted Domain.
C. A new Receive connector.
D. A remote domain.

Correct Answer: A

QUESTION 377
You have a Hub Transport server named Server1 that runs Exchange Server 2010. All Exchange users use IMAP4 to retrieve email. You need to ensure that all users can send email using SMTP. Your solution must not require any modifications to the default connectors. What should you do?

A. Configure IMAP4 clients to send email using TCP port 25.
B. Configure IMAP4 clients to send email using TCP port 587.
C. Create a new Send connector and configure the connector to use port 110.
D. Create a new Send connector and configure the connector to use port 143.

Correct Answer: B

QUESTION 378
Your company has a main office and 20 branch offices. Each office contains an Exchange Server 2010 Mailbox server and an Exchange Server 2010 Hub Transport server. Each office is configured as a separate Active Directory site. Each branch office site has one IP site link that connects to the main office site. You need to ensure that email sent between offices is routed through the Hub Transport servers in the main office. What should you do?

A. From the Exchange Management Shell, modify the Exchange specific site link costs.
B. From the Exchange Management Shell, configure the main office site as a hub site.
C. From Active Directory Sites and Services, modify the site link costs.
D. From Active Directory Sites and Services, remove all IP site links and then create new SMTP site links.

Correct Answer: B

QUESTION 379
You have an Exchange Server 2010 Mailbox server. The server contains one mailbox database. You need to view the last logon time of all users in the organization. What should you do?

A. From the Exchange Management Shell, run Get-MailboxDatabase.
B. From the Exchange Management Shell, run Get-MailboxStatistics.
C. From the Exchange Management Console, run the Remote Connectivity Analyzer.
D. From the Exchange Management Console, create and export a filter.

Correct Answer: B

QUESTION 380
You have an Exchange Server 2010 Mailbox server. You need to identify which users have the largest mailboxes on the server. What should you do?

A. Run the Get-MailBoxStatistics cmdlet.
B. Run the Get-StoreUsageStatistics cmdlet.
C. Add the MSExchangeIS Client performance counters to the Performance Monitor.
D. Add the MSExchangeIS Mailbox performance counters to the Performance Monitor.

Correct Answer: A

QUESTION 381
You have an Exchange Server 2010 organization that contains one Mailbox server. All users connect to Exchange using Microsoft Office Outlook 2010. You need to identify the latency of client connections to the Mailbox server. What should you run?

A. Exchange Best Practices Analyzer.
B. Message Tracking Performance tool.
C. Test-OutlookConnectivity cmdlet.
D. Test-OutlookWebServices cmdlet.

Correct Answer: C
QUESTION 382
You have an Exchange Server 2010 organization. You need to identify the following information for a user's mailbox:

• The size of items in the Inbox folder
• The number of items in the Deleted Items folder

You must achieve this goal using the minimum amount of administrative effort. Which cmdlet should you run?

A. Get-MailboxFolder.
B. Get-MailboxFolderStatistics.
C. Get-MailboxStatistics.
D. Get-StoreUsageStatistics.

Correct Answer: B

QUESTION 383
You have an Exchange Server 2010 organization. You need to determine why a remote SMTP server rejects emails sent from your organization. What should you do?

A. Review the application event logs.
B. Review the message tracking logs.
C. Set the Protocol logging level to Verbose on the Receive connectors and then review the protocol log files.
D. Set the Protocol logging level to Verbose on the Send connectors and then review the protocol log files.

Correct Answer: D

QUESTION 384
You have a database availability group (DAG) that contains two servers named MBX1 and MBX2. You discover that a mailbox database named DB2 is in a Failed and Suspended state on MBX2. You need to reseed DB2 to MBX2. You must achieve this goal by using the minimum amount of administrative effort. What should you do?

A. From the Services console, restart the Microsoft Exchange Replication Service.
B. From the Exchange Management Console, run the Add Mailbox Database Copy wizard.
C. From the Exchange Management Shell, run the Update-MailboxDatabaseCopy cmdlet.
D. From the Exchange Management Shell, run the Restore-DatabaseAvailabilityGroup cmdlet.
Correct Answer: C

QUESTION 385
Your network contains two Exchange Server 2010 Mailbox servers. You create a database availability group (DAG). You need to ensure that the Exchange servers can replicate mailbox databases. What should you do?

A. Modify the membership list of the DAG.
B. Add the Network Load Balancing feature on both servers.
C. Add Active Directory Federation Services (AD FS) on both servers.
D. Enable Datacenter Activation co-ordination (DAC) mode for the DAG.

Correct Answer: A

QUESTION 386
You have an Exchange Server 2010 organization. You need to prevent internal users from sending messages that contain the phrase "Company Confidential" to external users. What should you create?

A. A Hub Transport rule.
B. A Managed Folder Mailbox policy.
C. A message classification.
D. A Send connector.

Correct Answer: A

QUESTION 387
You have an Exchange Server 2010 organization that contains an accepted domain named fabrikam.com. You need to automatically forward all email messages sent to fabrikam.com recipients who do not exist in the organization to another server. Which properties should you modify?

A. Accepted domain.
B. Default email address policy.
C. Default Receive connector.
D. Default remote domain.

Correct Answer: A
QUESTION 388
You have an Exchange Server 2010 organization that contains an accepted domain named contoso.com. The Exchange organization contains a DAG named DAG1. The organization also contains one public folder database called PF1. You need to configure public folder replication to the other servers in the DAG. What should you do first?

A. Use the Set-DatabaseAvailabilityGroup cmdlet.
B. Use the New-PublicFolderDatabase cmdlet.
C. Use the Set-PublicFolderDatabase cmdlet.
D. Use the Exchange Management Console (EMC) to modify the properties of PF1.

Correct Answer: B

QUESTION 389
You are the Enterprise Administrator of an Exchange Server 2010 SP1 organization. Your server is responding to SMTP requests with the address cas1.contoso.com when it should be mail.contoso.com. What should you use to correct this?

A. Set-TransportServer.
B. EMC Hub Transport rule.
C. EMC Hub Transport Properties.
D. Set-TransportConfig.
E. Set-TransportAgent.
F. Set-ReceiveConnector.

Correct Answer: F

QUESTION 390
You have an Exchange Server 2010 SP1 organization that contains a CAS array. There are two servers, named CAS-01 and CAS-02, in the CAS array. You have a machine on the internal network called Test1. When one Client Access server crashes Test1 cannot download the autodiscover details from the Client Access Server array. Which cmdlet should you use to rectify this?

A. Set-ClientAccessArray.
B. Set-ClientAccessServer.
D. Set-AutodiscoverVirtualDirectory.

Correct Answer: B

QUESTION 391
Ensurepass.com Members Features:

1. Verified Answers researched by industry experts.
2. Q&As are downloadable in PDF and VCE format.
3. 98% success Guarantee and **Money Back** Guarantee.
4. Free updates for **180** Days.
